24

25

MARTY VIRGILIO: And Marty Virgilio.

CHUCK CASTO: Hey, did you guys see this media report about Amano coming here?

SCOTT MORRIS: Yes, I've heard, I picked up on it sometime earlier today. But I don't know if that's truth or fiction.

CHUCK CASTO: I don't know either, but, you know, when we were talking about the Chairman, you know, he's kind of --

SCOTT MORRIS: Yeah. We were also trying to get a fix on where the, the IAEA team. Have they arrived? Did you get any sense of the where they are?

CHUCK CASTO: That's the first we're hearing about this, an expert team from IAEA. We hadn't heard about that.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

SCOTT MORRIS: Yeah. I picked up on that in, it's coming across the trade press, that IAEA has dispatched a team.

CHUCK CASTO: Supposedly, all the, all the Russians are supposedly coming too.

SCOTT MORRIS: Well, yeah. Yeah. We heard that. And as a matter of fact, you, you had told us that.

CHUCK CASTO: Yeah.

10

11

12

13

14

15

16

17

18

19

20

22

23

24

25

SCOTT MORRIS: It's, it's the -- yeah, and Amano, I mean, it seems to make sense that as a, as a member of the Japanese community, he's going to have to come back. It would be hard for him not to.

CHUCK CASTO: Right. I just wanted to, you know, the political, the -- I just wanted to make sure that you are aware of Amano's visit, and --

SCOTT MORRIS: Yeah.

CHUCK CASTO: You know, the things that we're reading that Tepco's saying about power supplies and -- what was the other thing, Brooke, that that media report said that --

BROOKE: About the water.

CHUCK CASTO: -- oh, the, that the, the video confirmed that there was water. That video, I saw that video. That video doesn't confirm anything.

CHUCK CASTO: Yeah, so I mean, that's,

-- never

mind. I keep forgetting about the recorded line here
-- but it's all, you know --

(Someone enters the conference call.)

CHUCK CASTO: -- you just have to take that at face value.

SCOTT MORRIS: Who came up on the

conference?

LEE TRASMINE: This is Lee Trasmine at

1 USAID.

22

2₿

24

2 \$

SCOTT MORRIS: Why are you on the conference call?

LEE TRASMINE: -- at USAID listening in.

I'm the liaison for USAID.

SCOTT MORRIS: All right. Could you drop off this call, please?

LEE TRASMINE: Yes, sir.

SCOTT MORRIS: Could you guys please do

me a --

(Audio interference.)

ROY ZIMMERMAN: She's in headquarters of USAID here in (inaudible). Lee's on the team, yeah,

2 þ

(Off-mic conversation.)

SCOTT MORRIS: Chuck, are you there?

CHUCK CASTO: Yeah, I'm here.

SCOTT MORRIS: Okay. Sorry about that.

CHUCK CASTO: No problem.

So, anyhow, the stuff you're seeing in the media, you know as well as we do that that's, you know, dubious.

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

13 14 15 16 17 18 1\$ ROY ZIMMERMAN: Hey, Chuck, is this Roy 2 Is there anything you can tell us about 2 Zimmerman. these power lines that they're talking about running 22 2 3

to, to one or more units?

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

24

25

You can't get in there to manipulate breakers. You may manipulate a breaker and -- you've had a, you've had a building explosion -- you may cause a fault. You know, you could burn the building down further by, by trying to energize equipment in fields that are hundreds of rads.

1₿

And what you going to start? Are you going to start the spent fuel pool pumps? That ain't going to do any good.

MARTY VIRGILIO: That's right.

CHUCK CASTO: There's no water in there.

I mean, the tsunami wiped out the service water

system and everything else. I mean, so what are you going to start?

Now, if you're going to use that power to power some temporary equipment and, you know, or, or

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

something -- and, and you might be able to -- they could have done this days ago. You could run, you know, you could a cable straight -- if you want to take care of the reactor, you could a cable straight to the Packer head of the motor and, and, you know, bolt it up and run an RHR pump. But, you know, there's a lot of radiation in there, and, and they're dubious about whether there's even water in the torus.

So, you know, what do you -- I, we don't see where the power thing is any solution at all.

SCOTT MORRIS: Okay. Well, I appreciate your, your thoughts on that. Thanks.

CHUCK CASTO: You know, maybe I'm wrong.

I don't know.

MARTY VIRGILIO: I, I don't think so.

SCOTT MORRIS: That's why, if you had access to be able to talk to them better than you all do, you'd be able to have some give-and-take and understand what they're planning on doing. But it doesn't sound like you guys have that kind of access.

CHUCK CASTO: What, to who?

SCOTT MORRIS: To either Tepco or

whoever.

1(

11

CHUCK CASTO: Yeah. I think he's, I think the ambassador, you know, he called the CEO. mean, I can't confirm he called the CEO, but he was, his office called the CEO and, you know, rightfully so.

MARTY VIRGILIO: Yeah.

CHUCK CASTO: -- you know, about the situation.

He and I are going over somewhere here in, in a few minutes to do something with somebody.

But I'll figure it out, I'll figure it out when I get in the car and figure out where we're going and what we're going to do. You know, it's probably one of

those pretty-face things again. But --

SCOTT MORRIS: Hey, Chuck, we just got,
Chuck, we just got word through our liaison team that
Amano from IAEA has arrived and has already conducted
a press conference.

ROY ZIMMERMANL: No kidding?

CHUCK CASTO: Yeah, so this may be, he may be going over to talk to Amano. The ambassador may be going over to talk to Amano. So that may be where I'm headed.

SCOTT MORRIS: Okay.

CHUCK CASTO: Marty, what do you think I should say to Amano?

MARTY VIRGILIO: I was just thinking through that. I mean, what, what's the key message there?

SCOTT MORRIS: Well, it's an opportunity.

MARTY VIRGILIO: Yeah, make sure he understands -- if I were in your shoes, I'd make sure he understands what your role is there and that you're interested in, in working with his team in a complementary manner.

I mean, really, what you want them to do is something you're not doing.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

23

22

1

11

12

13

14

15

16

17

18

19

2 þ

2

2

25

CHUCK CASTO: Right. Complement -- like, the Russians are doing cleanup kind of stuff.

MARTY VIRGILIO: Right. Right.

CHUCK CASTO: And that's, that's good.

We're not doing that. They can do that.

MARTY VIRGILIO: Yeah. And, well, I think I would, I would urge him to have whoever he's got as a team lead engage with your, your staff to figure out how they can add value and not, you know, become some redundant enemy to what you're trying to accomplish.

CHUCK CASTO: Right.

1

14

1 b

11

12

13

16

17

18

19

2

2

2

23

24

2

CHUCK CASTO: Okay.

ROY ZIMMERMAN: That's good.

MARTY VIRGILIO: -- which is good.

CHUCK CASTO: I think what the ambassador

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

is going over to do is ceremonially share the images with Amano. I believe that's what they told me this morning.

MARTY VIRGILIO: Okay, we're seeing him on the news now.

MALE PARTICIPANT: He's IAEA.

MARTY VIRGILIO: Yeah, he's replaced

ElBaradei. And he's

10

11

12

13

1#

15

16

17

18

19

20

21

2 2

28

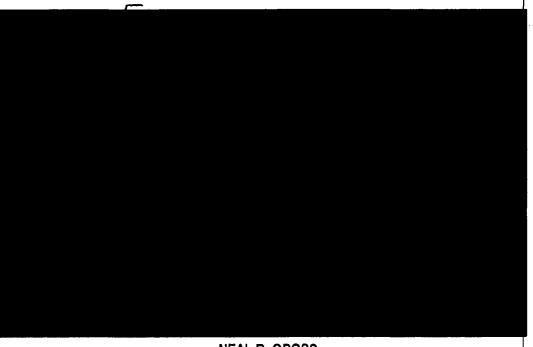

24

2 🛱

ROY ZIMMERMAN: This will give him the opportunity, the diplomatic opportunity, to try to --MARTY VIRGILIO: Yeah.

Now, I think, Chuck, the key is to find out who his team lead is. I mean, he's just here for the day.

CHUCK CASTO: Right. He probably will have his team lead with him.

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

MARTY VIRGILIO: If Jim, if Jim isn't, you know, if Jim isn't the leader of the team, the person who is there works for Jim, which is also another in-road for us. Okay?

CHUCK CASTO: Right. So you may want to establish that link or something.

MARTY VIRGILIO: Yeah. I was thinking about it, but I realize that my time clock is a little off, so I'll have to do it as he gets up.

CHUCK CASTO: All right.

10

1

12

13

14

15

16

17

18

19

2 0

2

22

23

24

25

MARTY VIRGILIO: So we'll put in a call to him IAEA time, maybe nine o'clock in the morning, because they tend to be late arrivers and see if I can, what we can establish with Jim now that Amano's in country.

CHUCK CASTO: Okay. That would be great.

And I'll see who I run into.

MARTY VIRGILIO: Yeah.

SCOTT MORRIS: Yeah. If the team lead isn't there, I'd ask.

CHUCK CASTO: Right.

MARTY VIRGILIO: You might even acknowledge your relation with Jim Lyons. That might help --

CHUCK CASTO: Okay.

MARTY VIRGILIO: So at least Amano knows who he's dealing with and at what level. ROY ZIMMERMAN: (Off mic) very quickly... CHUCK CASTO: Good? MARTY VIRGILIO: Yeah. That's good. CHUCK CASTO: Okay. I'll, when I get back from whatever it is I'm going to do, I'll call you. MARTY VIRGILIO: All right, buddy. PAUL ZIMMERMAN: See you, Chuck. CHUCK CASTO: All right. See you soon.

(CONFERENCE CALL INITIATED.)

00:12:25/00:22:59

SCOTT MORRIS: John, are you there?

PAUL ZIMMERMAN: John, are you there?

JOHN MONNINGER: Yeah. Hey, is that

Scott?

SCOTT MORRIS: Yes. You've got, you've got the whole gang here.

JOHN MONNINGER: The whole gang?

SCOTT MORRIS: Well, you've got Dan

Dorman, Marty Virgilio, Roy Zimmerman, and myself.

MARTY VIRGILIO: You're a popular guy,

John.

22

23

24

2 \$

JOHN MONNINGER: Boy, if we call, you guys jump.

(Laughter.)

MARTY VIRGILIO: That's just the way it

should be. Right?

JOHN MONNINGER: That's right. Hey, so are you ready?

SCOTT MORRIS: Yeah. What do you got?

JOHN MONNINGER: General, we have a request from General Fields, who is either Army or Air Force in charge of all forces in the Pacific, he has requested to be linked in to our daily briefings,

I guess the briefings with the Chairman that we would be, be giving once, twice a day, et cetera. We wanted to run that thought through you guys.

SCOTT MORRIS: I'm sorry.

JOHN MONNINGER: They don't want to be a hindrance, but they want to kept more in the loop.

My thought is, you know, that's one option.

The second option is we continue with the Chairman's briefing, and may subsequent to that, whether the Chairman would want to brief the General separately or if you guys out there would prefer us to do a separate briefing with the General.

1

11

12

1

14

The US Department of Defense Forces are becoming heavily involved in the operation, so we do believe that we need to keep General --

MALE PARTICIPANT: (Off mic.)

JOHN MONNINGER: -- so the question is, how do we want to do it?

ROY ZIMMERMAN: You're saying our military is getting more involved in dealing with this event?

JOHN MONNINGER: Correct. They are doing the logistics with transporting equipment. A lot of other supplies are coming in. There's United States Forces Japan or United States Japan Forces. We're

in, you know, several meetings a day with them along with the civilian defense forces of, of Japan.

ROY ZIMMERMAN: Well, my, my two cents on it would be the, you know, the, the Chairman's call.

But our, our input would be that it would be two separate calls.

JOHN MONNINGER: Yeah. That's my thought, two separate calls. You know, my thought was not to bring them on the one we do with the Chairman. We're a small agency. You know, it's, it's a little bit informal and we do some brainstorming, you know, some discussions, you know, and everyone --

1 B

ROY ZIMMERMAN: So we'd be glad to, however best to arrange a phone call separately with the General subsequently.

JOHN MONNINGER: Okay. So that, I mean the third option would be just for Chuck or I to provide it. But I think with the General, it's a pretty high hat.

MARTY VIRGILIO: Yeah, I'm thinking that maybe the person who sits in Scott's chair along with one of you two, you or Chuck, to brief the General.

Pick a time of day or which days of the week and that's, that's the way we conduct the briefing.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

JOHN MONNINGER: Okay. Do we want to start off with, the Chairman from the NRC's on the first one and then maybe --MARTY VIRGILIO: No. No. No. Ι wouldn't think so. I think he is pulled from one end to the other, John. JOHN MONNINGER: Okay. MARTY VIRGILIO: I mean, and he is, and, you know --ROY ZIMMERMAN: Yeah, I wouldn't want to set that precedent and then disappoint the General because the Chairman is not available. JOHN MONNINGER: Right. Right. MARTY VIRGILIO: And believe me, he's not available. JOHN MONNINGER: Okay. MARTY VIRGILIO: So I would say that Scott and, and, yeah, Chris Miller and the people that sit in that chair would be the ideal persons, along with --JOHN MONNINGER: So --MARTY VIRGILIO: -- whatever you do --JOHN MONNINGER: And the person that sits in that chair is the, the safe (inaudible)? Which

10

11

12

13

14

15

1€

17

18

19

2 **Q**

21

22

23

24

25

NEAL R. GROSS

chair are you talking about back there?

SCOTT MORRIS: We're talking about the Executive Team response advisor.

JOHN MONNINGER: Okay, the Executive Team response advisor. So, so the call would be led up through the HOO line, the Executive Team response officer and Chuck or I out here.

SCOTT MORRIS: Yeah.

JOHN MONNINGER: And we would link through the Ops Center and the --

SCOTT MORRIS: We would set up, we would set up a separate room, John, and I'd, we'd go back in one of the ante rooms here.

JOHN MONNINGER: Okay.

MARTY VIRGILIO: We, of course, would do it to suit the time of the General.

CHARLIE MILLER: Right.

SCOTT MORRIS: Sure. We have somebody here 24/7.

MARTY VIRGILIO: And we could think about protocol as to, you know, what you would brief and then what you guys would brief.

JOHN MONNINGER: Okay.

MARTY VIRGILIO: And I could see that our briefing would be from our status sheet --

JOHN MONNINGER: Okay.

NEAL R. GROSS

25

10

11

12

1

14

15

15

17

18

19

20

21

22

28

24

MARTY VIRGILIO: -- that I send, two, twice-a-day updates.

JOHN MONNINGER: Okay.

SCOTT MORRIS: I think it would be helpful, John, if we knew what type of information the General was looking for or what type of the engagement he was trying to get with us, or whomever, and then --

JOHN MONNINGER: Right.

ROY ZIMMERMAN: And if he has a list of specific questions that he wants us deal with and try to respond to --

JOHN MONNINGER: Yeah.

11

12

1 B

14

15

15

1

18

19

20

21

2

23

24

25

PAUL ZIMMERMAN: -- for a more effective call.

JOHN MONNINGER: Yeah. Not right now.

We don't believe he does. But I, I think his assets

are being increasingly taxed -- I guess that's the

word -- so he has to know what is going on.

SCOTT MORRIS: Yeah. He's the guy who's providing the resources, the men, the helicopters, airplanes, whatever, to move stuff around and to get people to set -- not in the, not in the field -- but it's his guys that are doing a lot of logistics. And he's like, geez, you know, I ought to know what's

going on.

10

11

12

1 B

15

16

11

18

12

20

21

22

23

24

25

JOHN MONNINGER: Yeah.

MARTY VIRGILIO: Yeah. And we would draw, we would draw the Reactor Safety Team, and if it was going to be this week, you know, the issue du jour this week is the pumping systems.

SCOTT MORRIS: Yeah.

MARTY VIRGILIO: So we would want to bring the Reactor Safety Team leader into that conversation so that they could get an understanding of what's going on from our perspective and the coordination we're doing with Naval reactors, Bechtel, INPO, and others.

JOHN MONNINGER: Yeah. I, and from what I understand, he hasn't necessarily been kept up to speed maybe at all, all along, or he's just -- so maybe the first couple briefings would be more elementary, just to really pull him into the loop.

You know, we couldn't go right away into this pumping system. You know, he needs broader context first.

MARTY VIRGILIO: Okay.

JOHN MONNINGER: When, when would you guys be available to do the first one if we were going to offer it up to him?

SCOTT MORRIS: Well, it, I mean --

MARTY VIRGILIO: I mean, the best thing would be to do it on the back shifts like this because that's when we're least taxed.

JOHN MONNINGER: Yeah.

MARTY VIRGILIO: So during your daylight hours.

JOHN MONNINGER: And that's when he's going to be available too.

1

1

12

1 B

14

15

16

17

18

1

2¢

21

22

23

24

25

MARTY VIRGILIO: Yeah. I, I like that.

ROY ZIMMERMAN: I'd almost say after we do the first one with the Chairman, in case he has any advice, there's anything he wants to tell us to make sure we cover it during call.

MARTY VIRGILIO: But it would be somewhere between, I don't know, eight and eight. You know, well, I'd say eight o'clock and four o'clock your time.

JOHN MONNINGER: So 8:00 a.m. and 4:00 p.m. Japanese time.

SCOTT MORRIS: So, and then, Roy, you just said, after we do the first one with the Chairman. But I, I thought we said the first one, we wouldn't have the Chairman in them.

ROY ZIMMERMAN: No, he wouldn't be. But

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

it's something nice to do. It's not anything that I, you know, have strong feelings about. I was just thinking that when we have an interaction with the Chairman, we would be going over with him what we're going to be doing with the General, and then if he has any words for, words of wisdom for us, we would know it on the front end.

JOHN MONNINGER: Okay. So when's your next briefing for the Chairman?

MARTY VIRGILIO: He calls, the Chairman specifically calls in when he gets up in the morning, so it could be anywhere from -- you know, I'm usually thinking he's going to call any time after six o'clock in the morning.

SCOTT MORRIS: And what --

MARTY VIRGILIO: It sort of depends on what's on his schedule and where he to be at eight o'clock.

SCOTT MORRIS: He'd have to be on a deputies committee call --

MARTY VIRGILIO: At eight?

SCOTT MORRIS: -- at eight, 7:30

tomorrow.

10

11

1 1

13

14

15

1

11

18

1

20

2

2 2

2 🖁

24

25

MARTY VIRGILIO: Then we can anticipate he's going to call us probably around 6:00 or 6:30.

JOHN MONNINGER: So, so --

(simultaneous off-mic conversation.)

MARTY VIRGILIO: Does that make sense to

you?

1

1

12

13

14

15

16

17

18

1

2t

2

22

23

24

25

JOHN MONNINGER: Yes, but I'm trying to work through these time zones.

So what I think I heard you guys say is the Chairman's got some type of 8:30 meeting call tomorrow.

SCOTT MORRIS: Seven-thirty.

JOHN MONNINGER: You guys have --

SCOTT MORRIS: Seven-thirty.

JOHN MONNINGER: -- 7:30. So you guys have to brief him prior to that, probably 6:30, and that is, that is our --

MARTY VIRGILIO: Four hours from now.

PAUL ZIMMERMAN: Yeah. I think it's, I think it's simple. We do the briefing for the Chairman around 6:30, 6:30, let him know we're going to be briefing the General, ask him if he has anything in particular he wants us to bring out or shy away from. And from then on, the General can call the shots on when he wants the briefing.

JOHN MONNINGER: Okay. So we would offer the first briefing in four hours, the first call in

four hours?

1 a

11

12

18

14

15

16

17

18

1

2 b

21

22

28

24

25

PAUL ZIMMERMAN: No. We're going to have, we're going to be talking to the Chairman in four hours. So let's --

MARTY VIRGILIO: Why don't you ask -- you know, he is the general. Why don't you see what his availability is between eight o'clock and four o'clock your time?

SCOTT MORRIS: That's how they've approached this. They're trying to minimize their impact on us.

PAUL ZIMMERMAN: Yes.

SCOTT MORRIS: And frankly, that's a damn good idea.

SCOTT MORRIS: I think Marty said it, I think Marty said it best. The back shift here is best for minimizing impact. So that puts it at about eight in the morning your time to 4:00 p.m. your time.

JOHN MONNINGER: Right. Right. But, but that could be for the steady-state one. What I'm trying to figure out is when, when is the earliest time we can offer him the first one, and then we'll go --

MARTY VIRGILIO: Right now. Right now,

John.

JOHN MONNINGER: Okay.

MARTY VIRGILIO: John, if he wants to

talk to us, we can do it right now.

JOHN MONNINGER: Okay. That sounds

great. Thanks.

SCOTT MORRIS: Thanks, John. We'll look

forward to to hearing back from you.

JOHN MONNINGER: All right.

10

2 B

24

25

DAN DORMAN: -- and USAID here is saying

that wants this stuff. And so I spoke -

JOHN MONNINGER: who?

DAN DORMAN:

MALE PARTICIPANT: He's a USAID --

DAN DORMAN: My understand is

the guy in that building where you are, who ultimately --

JOHN MONNINGER: Right.

DAN DORMAN: -- gives the okay for USAID to procure this equipment.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

JOHN MONNINGER: Yes. There is, yes,

there is a -- they want a final, they want final -
DAN DORMAN: My understanding is they've

lined up the, the logistics for the move. But the,

the question that's put to them now is the

procurement of the equipment, the pumps, the hoses,

everything they need to set up these spray systems.

And, and AID is looking for the go-ahead from

to procure this equipment.

٠.

DAN DORMAN: Okay. That could become the long, the long pole in the tent.

JOHN MONNINGER: It, it can be, but the other thing is they can decide proceed absent that confirmation.

MALE PARTICIPANT: That's Roy and Dan, I think.

(Simultaneous agreement.)

JOHN MONNINGER: I mean, you, you can

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

gamble. You can wait for the confirmation or you can gamble.

DAN DORMAN: Well, if willing to gamble, then he needs to contact his folks back here to give them the green light.

JOHN MONNINGER: Yeah. Well, what's happening is we're trying to reach of the Ministry of Defense right now and get his confirmation or level of confidence to allow them to proceed.

DAN DORMAN: Do you, do you have a sense of when that might happen, when they might reach the point where they say, we're either, we either got an answer from MOD or we're going without it?

JOHN MONNINGER: We'd like to get it, you know, within the next couple hours.

DAN DORMAN: Okay. We, we'd hate to have this stuff lined up in warehouses and cooling in its heels if that's not necessary.

JOHN MONNINGER: Right. Right. That's, they're very much understood. It's also understandable. There's a little bit of reluctance, it's not confirmed, so you know, we're pushing it right now.

DAN DORMAN: Appreciate it.

JOHN MONNINGER: Hey, do you want a point

of information?

1 B

SCOTT MORRIS: Sure.

JOHN MONNINGER: The embassy, there's some Russians in town who are back to meet with us. They're are supposedly technical experts. Two of them, we don't know their exact names or positions. We believe they've been involved in, potentially, Chernobyl cleanup and some other nasty stuff in Russia.

So we've agreed to meet with them at 7:00 p.m. this evening. We'll have to do it off-site.

But we said we would meet with them 7:00 p.m. if they could have a phone call/conference call speaker bridge and foot the bill back to Headquarters such that we could potentially loop the RST in. I haven't notified the RST of that though.

DAN DORMAN: You have now because Pat Howell is sitting right here.

JOHN MONNINGER: Yeah, so 7:00.

Actually, it's not confirmed yet. They asked if we could attend one at 7:00 p.m. or 7:30 our time out here. He said yes, but they're yet to get back to us.

But we do expect the meetings to occur, but it's not confirmed, and that would be in about

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

two, three hours 15 minutes from now. So whatever that makes it back there.

SCOTT MORRIS: Any more word from the General, Japanese, of U.S. Forces in Japan?

very similar position. We provided our proposal back, a conference call as early as five hours from now to allow you guys to do your morning brief of the Chairman. Well, this was five hours from probably an hour and a half or so ago. That would allow you guys to do your morning brief of the Chairman back there and determine whether the Chairman wanted to engage on this call or not. So we offered --

25

SCOTT MORRIS: (Inaudible).

JOHN MONNINGER: -- you know, we offered the five hours about an hour and a half ago and hadn't heard from them.

And we said subsequent briefings would be on day shifts here, which is night shifts back there, and the general could pick the time.

DAN DORMAN: Okay.

JOHN MONNINGER: Is that fair?

DAN DORMAN: Yeah. Great.

JOHN MONNINGER: Okay. But, but those items, the Russians and the General, their, the loop

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

hasn't been closed yet. But, but it's not NRC actionable.

(Off-mic conversation.)

SCOTT MORRIS: Chuck's with them. Right?

JOHN MONNINGER: Chuck's with them, and it's our speculation who the meeting is --

MALE PARTICIPANT: It might be some -- I would think it would be meetings with (inaudible) to give the current status.

DAN DORMAN: An FYI for you: We're, Marty's on a call with Jim Lyons at IAEA --

JOHN MONNINGER: Okay. Jim? good.

DAN DORMAN: -- to try to figure out what exactly they're intending to do et cetera and so on.

JOHN MONNINGER: Right. Right.

DAN DORMAN: And make sure we're coordinated and not stepping on each other.

JOHN MONNINGER: Okay. Good. All right.
Thanks guys.

MALE PARTICIPANT: All right. It looks like you're meeting's coming up with the director.

JOHN MONNINGER: All right. Bye-bye.

.

(CONFERENCE CALL INITIATED.)

03:30:23/00:33:25

DAN DORMAN: Lee, are you there?

LEE TRASMINE: This Lee.

MARTY VIRGILIO: Hi, Lee. We cut you off earlier because we were on another discussion. We thought we'd connect back with you and see what was up.

LEE TRASMINE: Okay. Well, I guess most of the evening has been involved with the Bechtel pump issues.

DAN DORMAN: Okay. And what's your understanding of the status of that?

1(

11

18

14

15

16

17

18

19

20

21

22

23

24

25

LEE TRASMINE: My understanding of the status is that, you know, we need to get an answer back from the head of the DART team, before they can actually do the financing and logistics of transporting that stuff.

DAN DORMAN: Okay. That's consistent with our understanding. And we have just been in touch with John Monninger and Company out in Tokyo.

LEE TRASMINE: Uh-huh.

DAN DORMAN: Just reminding them of that, and the urgency of that.

LEE TRASMINE: Right. And, and I know

there's been some questions.

I had heard discussion earlier, you know, that if it was approved, that USAID would be paying for, you know, likely the transport. And I guess they also need to specifically ask about procurement of goods. So it would be ones and/or the other. It depends on what approves.

DAN DORMAN: I think there's, there's, there's, there's the design work that Bechtel's done, the procurement of the, of the goods, and transportation of the materials, and then ultimately, you know, the assembly and operation of it. So it's kind a, it's kind of the whole --

LEE TRASMINE: A multi-faceted, then.

MARTY VIRGILIO: Yep.

LEE TRASMINE: Okay. Okay. But was that all specified in the request?

DAN DORMAN: There are multiple entities involved in that. It's not just Bechtel.

LEE TRASMINE: Correct.

DAN DORMAN: So . .

LEE TRASMINE: Correct. What, was all of that specified in the request to ?

DAN DORMAN: Well, again, I mean we're not interacting directly from here.

NEAL R. GROSS

LEE TRASMINE: Right.

DAN DORMAN: We've relayed that to the site team and we're awaiting the status of that.

LEE TRASMINE: Right. And we spoke with the logistics folks here and tried to send out an email, just to -- once, once an answer comes back for

it can happen very fast -- so we were just trying to grease the skids a little bit with, hey, if you get any of this logistics information ahead of time, it would help that process.

DAN DORMAN: All right.

LEE TRASMINE: But that, that should not hold up our asking and getting an answer.

MARTY VIRGILIO: Okay.

DAN DORMAN: Okay. All right, well, I don't really have much more to offer you.

LEE TRASMINE: Okay. Okay, well I do appreciate the touching down.

PAUL ZIMMERMAN: Lee, this is Roy. Do you need anything from us?

LEE TRASMINE: No. We're doing pretty well, doing pretty well. Folks are actually starting to show up here. So it's, it's been kind of a busy night, a lot of emails going through, quite a few phone calls. So I'm glad to be aboard.

ROY ZIMMERMAN: All right. Very well.

LEE TRASMINE: Thank you. Likewise.

DAN DORMAN: Bye.

LEE TRASMINE: Bye-bye.

1 \$

(CONFERENCE CALL INITIATED.)

00:33:29/00:53:49

MARTY VIRGILIO: Hey, Chuck?

MALE PARTICIPANT: The call with the General's at nine.

DAN DORMAN: I'll do the call with Fields, but I, I've got to talk to Marty about that, too, or whomever's on shift.

MARTY VIRGILIO: Chuck, you're on the bridge with the Executive Team.

CHUCK CASTO: Hi. This is Chuck Casto. Who's on the Executive Team?

DAN DORMAN: Marty Virgilio, Roy Zimmerman, Dan Dorman.

CHUCK CASTO: Good. Good.

MALE PARTICIPANT: We're on a recorded line.

CHUCK CASTO: Yeah, I need to get off the recorded line. So you guys, can you call us back?

MARTY VIRGILIO: Yeah, we can do that.

CHUCK CASTO: On a clean line?

MARTY VIRGILIO: Yeah.

CHUCK CASTO: Do you know our number?

DAN DORMAN: Can the HOOs put you --

Can the HOOs split them out and put them

NEAL R. GROSS

10

11

12

1

HOO: Absolutely. We can take the call right now and stick him on a conference bridge that's not recorded.

DAN DORMAN: Yes. Do that.

MARTY VIRGILIO: Yeah, could you do that?

Could you put them in the back room?

HOO: Yeah. If you would like, we can transfer. If you want Mr. Casto to call back in, we'll simply transfer you to the ET chamber.

MARTY VIRGILIO: All right.

HOO: So, Mr. Casto, why don't you drop the line, sir. Call us back in the Ops Center.

And Mr. Virgilio, I'll shoot the call to the chamber.

MARTY VIRGILIO: Okay.

HOO: Roger that.

(Conference call ended.)

(On-bridge conversation continues at 00:34:51.)

MALE PARTICIPANT: They've, they've taken air samples at, from the nuclear (inaudible) -- air samples taken by a Japanese government organization, and he's the -- according to him, they've been duplicating measurements for Tokyo in any location.

These are good numbers. I asked about the pedigree of the quality of samples taken taken. He said (inaudible) these are reliable samples.

The samples they've taken, they converted the samples, which are prepared samples, to thyroid doses because of the, of iodine and cesium levels.

The iodine conversion would give you 75 microsieverts mSv, which is in the 10 mrem range, which we have.

That is, you know, they would have 7-1/2 mrem per unit. So it, it's confirmed. It wasn't . . .

Then they went back and actually used a complex core projection. So, using the data as best that they knew of the reactor -- I think they used one reactor (inaudible) -- and they predicted in that location where the samples were taken, and they came up with a range of 100 microsieverts and one millisievert, which, the 75 is in that range of the (inaudible) on the lower end.

MALE PARTICIPANT: For the Tokyo (inaudible)?

MALE PARTICIPANT: Between Tokyo and the -- within Tokyo.

MALE PARTICIPANT: Tell me again what the source (inaudible) they used, please.

MALE PARTICIPANT: Well, they went --

NEAL R. GROSS

MEAL II. GITOOD

MARTY VIRGILIO: Have they done a background?

MALE PARTICIPANT: No. They, they actually, they -- to, to do a little bit more be

actually, they -- to, to do a little bit more benefit of the samples that were taken, they projected from the reactor, their best understanding of the status of the core.

MARTY VIRGILIO: Okay.

MALE PARTICIPANT: And I don't have the details with me; it's --

MALE PARTICIPANT: It's some release rate?

MALE PARTICIPANT: Yes, at some release they had best as they could. And their projection came not too distant from the actual measurement.

And, and they were satisfied that this is good enough because the smoke, for example, was taken.

Then this particular projection was, it was benefiting from multiple samples along the way, so they kind of fine-tuned their source terms for these, and so the reactor core source term for this particular --

MALE PARTICIPANT: Iodine and potassium?

And they also went back to the spent fuel

NEAL R. GROSS

MALE PARTICIPANT: Yes.

•

not in Japan?

MALE PARTICIPANT: Yes. Apparently, the extent that they had. And these guys appear to be kind of sophisticated. They're 24-hour, seven, and they've invited us to call them anytime we have any questions, and they were happy to help us out.

MALE PARTICIPANT: (Inaudible) before anything happens.

MALE PARTICIPANT: Okay. This was not all Oliver's stuff. Oliver's in Japan. This is -MALE PARTICIPANT: Oh. These guys are

MALE PARTICIPANT: No. These are in

Paris. This is a, another organization. So Oliver is in Japan at the Embassy and, and helping these guys. So these guys are doing all the calculations from the information gathered by (inaudible) through the help of the embassy and many others that they have out there.

They're well equipped, they said, to assess the conditions of the ground. So their assumptions here are benefiting from their, their assessment.

(Audio interference.)

MALE PARTICIPANT: (Inaudible) shift.

(Audio interference).

MALE PARTICIPANT: (Inaudible) -- these

numbers?

MALE PARTICIPANT: These, these are good numbers. They're, they were assuming that these were basically projection goals,

MALE PARTICIPANT:

MALE PARTICIPANT: Well, five Rems, that's evacuation time. That's very, very (inaudible).

MALE PARTICIPANT: But this is not five. This is ten millirem.

MALE PARTICIPANT: Millirem?

MALE PARTICIPANT: Yeah.

MALE PARTICIPANT: Ten millirem.

MALE PARTICIPANT: Ten, yeah, 7.5

millirem.

(Simultaneous conversation.)

MALE PARTICIPANT: But it's still --

MALE PARTICIPANT: But these, but this is

150 miles away.

MALE PARTICIPANT: Yes, and this is (inaudible) here. And, therefore, still there's concern for the fact that if, if this is an air sample, imagine the position on the ground along the way of collecting and then, you know, is there an injection concern? Because I think that was what Shaun Cool (phon) was talking about. He said, once you inhale iodine, some of it is then --

MALE PARTICIPANT: You, you exhale it.

MALE PARTICIPANT: -- exhale it. But if you ingest it, you get a little bigger dose cumulatively over time, cumulatively if you ingest.

MALE PARTICIPANT: You know, like --

MALE PARTICIPANT: Again, subject to a

lot of stuff because people go through the cow pastures --

(Simultaneous conversation.)

MALE PARTICIPANT: Another pathway in (inaudible).

MALE PARTICIPANT: Yeah, and people can wash it they can -- all that is in there. But we got it in there. It's too.

MALE PARTICIPANT: Good.

21

2

24

25

MALE PARTICIPANT: It didn't go away. In other words, we were hoping it would go away and it would be, oh, yeah, yeah, it's a bad number; don't count on it. However, they're not putting it in any press releases.

MALE PARTICIPANT: Have they posted it to the website?

MALE PARTICIPANT: In the website, and they're sharing that website with Nuke and they're sharing all that information. But this is the Nuke and they'll pass it on to the Reactor Safety Team.

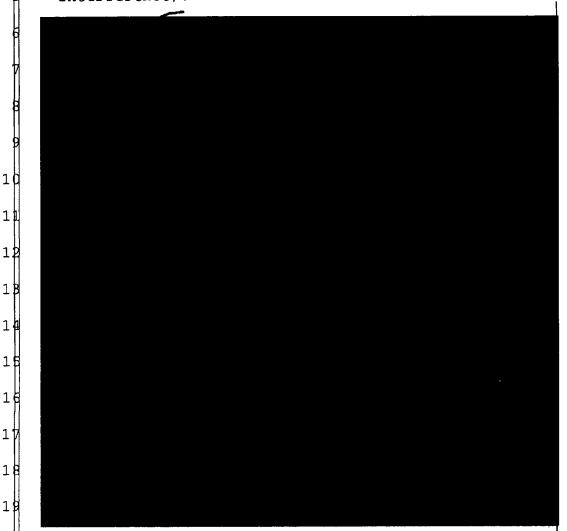

MALE PARTICIPANT: I haven't seen the flyover data yet.

(Simultaneous off-mic conversation.)

SCOTT MORRIS: No, I didn't. I just came in at 11:00 and now all of a sudden I got --

MALE PARTICIPANT: Well, they didn't get any plume that they could measure (inaudible).

MALE PARTICIPANT: Yeah, from what I understand, they measured ground but the (audio interference).

SCOTT MORRIS: Yeah, that's what I saw when I was there. I went to (inaudible) on an exercise, and on the protective measures side, they have their stuff together.

2

21

22

2 🖁

2

2 🛱

MALE PARTICIPANT: Yeah. They certainly went through the steps of taking the samples and

conversions and all that stuff and pedigreed them.

5

MALE PARTICIPANT: Yes.

MALE PARTICIPANT: Well, this is not, I don't think it rises to that level, for actually, for people to evacuate Tokyo. But it basically means, keep an eye on it just in case. If he turned around and said, no, I have more equipment for you --

MALE PARTICIPANT: No, no, no.

(Simultaneous off-mic conversation.)

MALE PARTICIPANT: I said, but how do you reconcile your dose projections that you did about the 50-mile evacuation with the consequences that it has caused. (Audio interference.) I said we are (inaudible). You know, these are calculations we do every time something --

MALE PARTICIPANT: What are they thinking about the consequences?

MALE PARTICIPANT: The damage --

MALE PARTICIPANT: The consequences that

our, that our decision caused?

FEMALE PARTICIPANT: No, not a problem.

SCOTT MORRIS: "Review white paper on

water applications if one is available."

FEMALE PARTICIPANT: There is a, there is a paper that Research was going to work on, I think Jennifer Yule, about adding water, and --

SCOTT MORRIS: Oh, yeah, yeah, yeah.

Okay. I know what it is. I know what it is. Okay.

MARTY VIRGILIO: What's missing in this is, is who we gave it to.

FEMALE PARTICIPANT: It's on the, it's assigned to, the assigned -- the sheet, the assignment's the next column to the right.

SCOTT MORRIS: You don't want -- the ET's not doing a white paper.

FEMALE PARTICIPANT: No. It was assigned to the ET because they have to tell --

FEMALE PARTICIPANT: Jennifer Yule knows that she's supposed to do it because --

SCOTT MORRIS: Well, then why wouldn't it say "Research"?

FEMALE PARTICIPANT: Because we don't have that as one of our INSR (inaudible) team.

They're not on the website to pick from.

SCOTT MORRIS: Oh, that's an interesting action lesson learned about this task tracker. They can only, the system only it let you assigned tasks to people here here in the center. You can't task anything out to anybody outside of the response organization.

FEMALE PARTICIPANT: Right. Right, and Scott, when you do the turnover, you're going to have to let Weber know, I mean, get in contact with NRR about the information notice --

SCOTT MORRIS: Notice.

SCOTT MORRIS: All right.

BRIAN McDERMOTT: Scott, can we tag those kind of action items as reserved for some other team name that we're not see using and then just put in the, who the contact is outside the center and then work around?

SCOTT MORRIS: I mean, we could.

BRIAN McDERMOTT: Well, other than that, we won't be able to --

SCOTT MORRIS: We're not using our -
Let me see that menu. Is there a menu?

What are all the options?

FEMALE PARTICIPANT: Like "assigned to" SCOTT MORRIS: Yeah. FEMALE PARTICIPANT: -- you know, the base team, the ST --SCOTT MORRIS: It's not like Operations Support Team. We're not using them. FEMALE PARTICIPANT: We could put it under that. SCOTT MORRIS: Yeah, put it under that. FEMALE PARTICIPANT: Do you want to do 11 that cut? Okay. Well, I'll go find the --12 SCOTT MORRIS: All the ones that, I mean 18 14 there's a bunch in here that, you know, we're tasking out to various offices and, that aren't part of the 15 IRO. 16 17 FEMALE PARTICIPANT: Right. SCOTT MORRIS: It's, it's hard to track 18 19 this stuff. FEMALE PARTICIPANT: Right. 20 21 SCOTT MORRIS: A, there's no unique number associated with each line item, which is a, 2 🛭 makes it difficult to find stuff. 23 FEMALE PARTICIPANT: Yes, I agree with 24

25

that.

SCOTT MORRIS: You know, I'm going to put that to you to you to make this enhancement to this task tracker because, you know, if we we're here for days, weeks, months, this, this thing might be 20 pages long. You want to know -
(Simultaneous conversation.)

SCOTT MORRIS: -- you know, when I need

SCOTT MORRIS: -- you know, when I need to look back at something, look at Item number 20.

Well, now, instead, I got to go back and try to figure out -- there needs to be a unique number added to each one of these.

MALE PARTICIPANT: Okay.

SCOTT MORRIS: And if there's a way to expand the menu of options to include --

FEMALE PARTICIPANT: NRR --

SCOTT MORRIS: Like major program offices or whatever.

MALE PARTICIPANT: You could probably put

FEMALE PARTICIPANT: You can read it. Ι know what it says. SCOTT MORRIS: This did get ET and RST review. FEMALE PARTICIPANT: Okav. SCOTT MORRIS: But we got lots of comments. FEMALE PARTICIPANT: Okav. SCOTT MORRIS: That's what generated this 10 one. Let's close this. 11 FEMALE PARTICIPANT: Close that. 12 SCOTT MORRIS: Just close this one. 13 FEMALE PARTICIPANT: Because we have a 14 new one. 15 SCOTT MORRIS: Yep. 18 FEMALE PARTICIPANT: Got it. Got it. 17 BRIAN McDERMOTT: Scott, where those 18 comments already emailed back to Magitzki (phon) and the other people that were there as contacts? 19 2 Ø SCOTT MORRIS: No. We, we read it and 21 it, the message is, it's not the right message. What 22 we're proposing is a, an alignment meeting with the, the leadership of NRR and the Executive Team to come 23 with what's the lesson we want to convey in this 24

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

25

generic communication.

It should be something more akin to what INPO did, you know, in terms of taking discrete actions, not advertising all the things that we've done as a regulator in the industry and, you know, (inaudible) done, et cetera, which is the way it currently reads.

(Extraneous content omitted.)

(CONFERENCE CALL INITIATED.)

01:19:17/01:43:27

MARTY VIRGILIO: Chuck, are you there?

CHUCK CASTO: Yeah, I'm here.

MARTY VIRGILIO: What's up?

CHUCK CASTO: So, I just got out of the staff meeting with the ambassador and I got a couple -- you guys, you've got to stop taking our calls.

Let me give you an overall -- you got

time for -- I know you're getting ready for General

Field and our regular briefing, which I'm going to

have to have John Monninger do for us because I've,

I've got to go to a, to another -- we're going to

meet tentatively at 10 o'clock with the, the Minister

of Commerce --

MALE PARTICIPANT: Economy.

CHUCK CASTO: -- Economy --

MALE PARTICIPANT:

CHUCK CASTO: and the CEO of

Tepco --

MALE PARTICIPANT:

MALE PARTICIPANT:

CHUCK CASTO: and the CNO

CHUCK CASTO: So we have that

50 we have en

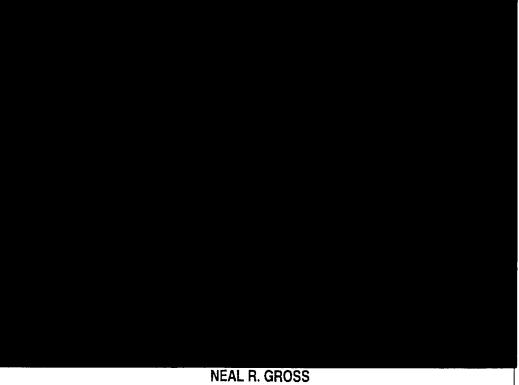

meeting at, at 10. We're going to have to get over there. So I'll have John, I'm going to ask John to be back from the Russians by nine o'clock, and for John to do that update.

And we're down a man. Tim is

So I would say. Today was probably one of the most distressful and, and energetic days. And you know, later on today, I was thinking maybe we did need some more people. If we get many more days like this, we're going to have to supplement the staff here.

1 8

2 þ

MARTY VIRGILIO: No. Keep going.

CHUCK CASTO: The, you know, mail service
-- there's, you know, the military today went with
the voluntary evacuation, so there's a lot of

There's, I

don't know all these admirals, Admiral Willard,
Admiral Walsh, and General Fields, and a lot of those

I think it's

Admiral Walsh is taking over the departure, the departure activities. So, and including -- the

So, here, the US Embassy is doing contingency planning in the event -- and so is UK -- they're doing contingency planning in the event that,

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

2B

that they would have to, you know, move out or evacuate the embassy.

Let me review my notes here just for a second because I just got out of a meeting. We've got other meetings to go to.

But, so there's, and the relief effort has gone from rescue, they've change that from rescue to life-sustaining efforts. And then actually, and I'll send you, I'm going to send you somehow -- somebody here can help me -- I've got a three-page document of the United States government response to the earthquake and -- they don't say that; I've got to get them to change the title -- but the government response to the earthquake and tsunami update.

This is basically a briefer for press.

On the second page is the activities related to the nuclear power plant at Fukushima. And it gives all the support the United States has provided. I think everything in here, I was aware of except for a couple of things.

The (audio interference) sent two humanitarian assistance survey teams, chemical, biological, radiological, and nuclear expertise to Sendai and Yugamata.

Is how you pronounce that city?

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

MALE PARTICIPANT: (Off mic).

CHUCK CASTO: Yeah.

1 B

2 🛱

And the Defense, Department of Defense established a chemical, biological, radiation and nuclear control center as Yakoda. They provided 150 NBC suits to Tepco employees. I'll send this to you. It's just, I mean, it goes on and on about the US supported Japan.

I know for me, I've spent almost all day with the ambassador and, you know, so that's, that's a challenge in terms of our resources if that continues. You know, and now he's started these staff meetings, you know, because of the response to the, to the earthquake and the nuclear plant. And we're part of that as well.

So, you know, today was a stress, stressed our resources more than I thought it would early today. And we're still, we're still here, and we still have meetings, a couple of meetings tonight. So we're probably going to have to think about supplemental and think about more longer-term facilities if that's what the, you and, you know, you guys in the ET and the Chairman think might happen. And we're probably going to have to start thinking about something longer-term.

military and the nuclear.

19

20

2

22

23

24

2 5

Does that make any sense, Marty? Did that clarify it?

MARTY VIRGILIO: Yeah. Yeah, yeah, yeah.

I got you now. I wasn't following you at first, but
now I understand.

CHUCK CASTO: Yeah, I don't follow myself half the time.

12 13 14 15 16

In Tokyo, you know, if -- our protective action, you know, I need somebody. I don't know who we've got here who can really talk about protective measurements and show RASCAL runs and --

Jack, you can do all that?

JACK: I'm familiar with it.

CHUCK CASTO: So, you know, we need to --

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

MALE PARTICIPANT: Chuck, where are they

-- Chuck --

17

18

19

20

2

2 2

23

24

25

MARTY VIRGILIO: Okay. And, you know, we're running calculations right now to --

CHUCK CASTO: Hold on. Stand by.

(Off-mic conversation).

CHUCK CASTO: We're listening to a page

here. Just stand by, Marty. I'm sorry.

Go ahead, Marty.

MARTY VIRGILIO: We, we're developing calculations to see what we think would be the worst

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

case and the best case with respect to radiation levels in your neighborhood.

CHUCK CASTO: That would be fantastic.

MARTY VIRGILIO: And that might help you as you think through what might be the trigger points for sheltering and evacuation. So the reactor --

CHUCK CASTO: Yeah, and they referred -- yeah, okay.

MARTY VIRGILIO: Okay, well, listen --

CHUCK CASTO: So I'll get Jack foster to

1

1

12

17

18

19

20

21

22

2 🛭

24

2 \$

MARTY VIRGILIO: -- for us around that.

CHUCK CASTO: Work with the protective

measures team and something that we can brief -- you know, I'll set up a briefing with the ambassador and

his staff, and we'll walk through.

One of the things I think we've got to do a better job of that I haven't been doing a good job of is, you know, a more formal brief of the ambassador. You know, I had a briefing with him this morning and I was unprepared. I was not prepared well enough in terms of handing him something and briefing him on something. So I got to do a better job on that.

MARTY VIRGILIO: Hey, Chuck, we'll take it as an action item to make sure that we share the results of that analysis with you or both analyses with you to show what's the best-case and worst-case dose you might see.

CHUCK CASTO: Okay.

10

11

12

20

21

22

23

24

25

SCOTT MORRIS: Yeah. We said that to the, our reactor safety team, and they came back and said it wasn't clear what the request was.

CHUCK CASTO: It's not real clear to me.

It doesn't resonate with me. I don't know who requested it.

It's the configuration of the spent fuel pool. Did anybody ask for that?

(Off-mic conversation).

CHUCK CASTO: I'll have to find out --

you know, stand by on that one and I'll talk to -
MALE PARTICIPANT: -- you on the phone,

she wanted to know if we could reach back to Tepco to

understand, before this had occurred, what the

configuration of the fuel in the spent fuel pool was,

how they had it racked.

CHUCK CASTO: Oh, you know, I don't know why that would be important that this point.

SCOTT MORRIS: All right, Chuck.

CHUCK CASTO: I would put that as a low priority.

10

23

24

2 🛱

SCOTT MORRIS: One other thing that I wanted to bring up, and that is that the French have posted on their website, the IRSN website the, this, I guess this expected dose --

DAN DORMAN: Chuck, this is Dan.

SCOTT MORRIS: Yeah, you, please.

DAN DORMAN: It's an evaluation. They got some air samples taken by Japanese officials in Tokyo, and they converted those air samples into an inhalation-only dose to the thyroid and came up in the neighborhood of 10 millirem to the thyroid based on current air sample information that they got from the Japanese. And they have posted that information this morning, this morning, Paris, which is in the

last few hours to the IRSN website.

We understand they're not doing any kind of press releases or anything like that to call attention to it, but it, it is out there. S we wanted you to not be shocked if you heard something come up on that.

MALE PARTICIPANT: Ten millirem.

DAN DORMAN: Ten millirem to the thyroid.

BRIAN McDERMOTT: What period of time,

Dan? Or is that a rate?

10

11

12

15

16

17

18

12

20

21

22

23

24

25

DAN DORMAN: That, I think it's a, I think it's a --

Do we know what the period of the uptake is that?

MALE PARTICIPANT: This, this would be from 24-hour inhalation.

DAN DORMAN: Twenty-four, 24-hour inhalation dose.

MALE PARTICIPANT: (Off mic).

MALE PARTICIPANT: So you're standing there and your inhaling it, basically.

MARTY VIRGILIO: So it's, and this is, this was, there was a little bit of a range, as you would expect, on the data, various air samples were collected and this was kind of the bounding of those

collections.

So, if you, if you happen to find that little cloud of iodine and stand in it for 24 hours, that was where you'd get. But that, that was a new piece of data for us.

CHUCK CASTO: Okay, that's -- yeah.

Fortunately, no, fortunately, maybe nobody will pick up on it. I don't know that that's helpful, I mean them posting that.

DAN DORMAN: Right. And we --

CHUCK CASTO: I don't know why they would do that.

DAN DORMAN: And we tried to touch on that But looking at some of the industry trade press, there's, there's a lot of information coming out of France.

CHUCK CASTO: Yeah, I don't know why -they're moving their -- they're probably trying to
justify all this stuff that they're doing. You know,
they did the voluntary evacuation and they're moving
their embassy, and, you know.

22

SCOTT MORRIS: All right, and you got the matrix of each plant, all six plants, and that's --

CHUCK CASTO: Yeah, he'll expect that tomorrow morning. You know, I have to update it tomorrow morning, but there shouldn't be any change.

SCOTT MORRIS: No, but I wanted to make sure that your, your request was met. So you got, you supposedly have it then.

MALE PARTICIPANT: (Off mic).

SCOTT MORRIS: No, it was, it's a table.

CHUCK CASTO: It's a table. Yeah, and we're going to have to take the equipment status off the bottom. Did we tell you about the equipment status? Did I tell you about that? You know, we're trying to pull this stuff together in Australia.

MALE PARTICIPANT: Yeah.

CHUCK CASTO: And, you know, that's been a nightmare. And then finally, they, we worked with the commercial, the people here in the embassy and, to, local into, into the government or into the country here to get the piping systems and all the pipes and connections and things we need, and they called --

Hold on a second --

-- they called, they called around for us and ran into a company that has all the supplies that we need for the piping system to put in --Oh, there's Tim. Don't bring that stuff in here, man. -- the piping system. And they said, well, coincidentally we had this same request for the same equipment from the Tokyo Fire Department. So the Tokyo Fire Department today brought all the equipment that we were requesting from Australia. That's Level V. MALE PARTICIPANT: INES. CHUCK CASTO: Oh, okay. INES's scale went to Level V. Did you see that? MARTY VIRGILIO: Yeah, we saw that in the news.

(CONFERENCE CALL INITIATED.)

01:43:32/01:44:33

SCOTT MORRIS: Hey, Bill, it's just Scott
Morris and Marty in here now. Roy and Jim Wiggins
are in a turnover in the little antercom. If you
want them, I can go get them.

BILL BORCHARDT: No. No, I'm just calling in. In, in fact, if Marty has a minute, if he can just call me on my, on the office phone.

MARTY VIRGILIO: Okay.

BILL BORCHARDT: Thirteen hundred.

MARTY VIRGILIO: All right. I'll do that in just a second.

Did you see the note I sent you?

BILL BORCHARDT: I, I think I've seen all of them. The one about the close-hold information?

MARTY VIRGILIO: Yeah, yeah. I, I think the Chairman has got a meeting with the Japanese ambassador today and so I thought he might need to understand what we're getting from the site.

BILL BORCHARDT: Yeah.

MARTY VIRGILIO: I'll give you a call in a few minutes.

BILL BORCHARDT: Okay. Yeah, I'm in on that meeting with the ambassador too. That's at,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

that's at four o'clock this afternoon. MARTY VIRGILIO: Okay. I hope that helps. BILL BORCHARDT: Yep, thanks. MARTY VIRGILIO: Okay. I'll give you call in a minute. BILL BORCHARDT: Okay.

COURT REPORTERS AND TRANSCRIBERS

(CONFERENCE CALL INITIATED.)

01:44:45/02:04:51

(Standby until 1:46:08)

BRIAN McDERMOTT: Okay, good morning, everyone. This is Brian McDermott. We have Jim Wiggins and Charlie Miller here at the Headquarters Operations Center, Executive Team room. We're going to give you a quick update this morning.

In terms of the plant conditions, to start off with, Reactors 1, 2, and 3, we understand the situation is essentially the same -- no significant change; that folks are trying to put in the seawater into the cores. We've not had any change in that reported.

2 5

We continue to put focus on spent fuel pools. The report we're getting is that Unit 3 is the focus currently for spent fuel pools. They did make some attempts to drop water from helicopters yesterday. That, at least from the video footage on the television, appeared to have limited effectiveness.

We did have some new reports about better success from some, some of the water cannons from fire department-type trucks. However, we've got no specific data to indicate how effective that has

been.

10

11

12

13

14

15

11

18

19

20

21

22

2 B

24

2 🛱

So we'll kind of give you that overall picture we've got.

Unit 4 spent fuel pool that we've been worried about for a while, the status of any cooling in that is unknown.

Unit 3 -- again, fire trucks are focused on that, and that's about all we know about it.

And then we do have some, some indication that there is heat up on the other pools. But to what extent, we can't tell.

One bit of information we did get relative to the pools and the zirc, potential for zirc fires or zirc reactions, is that we had questions from the team in country about, you know, number one, were there different recommendations on, on how you would attempt to mitigate a, a zirc fire by just cooling the pool? And how would you know when to apply, you know, which method?

Over the night, one came back, working with our experts that have worked on spent fuel pool issues, the answer back is basically that if you actually had a zirc fire, you would know it. It's, you're not going to mistake the steaming that we've been seeing here in different images, on the TV and

so forth, you're, you're not going to mistake a zirc fire and steaming. It would be clear there's a difference.

The other bit of information on that is the best recommendation that experts came up with relative to how to mitigate the problem is, in any case, just add water and more of it.

So that's about all the change relative to our understanding of the conditions.

1

11

12

13

15

15

17

18

1 9

20

21

2

2₿

24

25

We're continuing to interface with the team on the ground. And with that, I'll turn it over to Charlie.

CHARLIE MILLER: Good morning. Wind directions are still going out to sea, going east. The, the priorities for the Protective Measures Team today are twofold. First, we're running realistic cases to try to attempt to correlate the data from the aerial monitoring that we receive periodically, of course, with our models to the extent that we can and also any sparse information we get through Japanese data.

In addition, we're, we're working in support of the Department of Energy

to run a worst-case scenario they

can be put on the shelf. The NRC is supporting DOE

for providing input parameters for what that will be.

The Department of Energy has a responsibility for running the codes.

That said, we are still being looked at to look in country with regard to providing advice to the Embassy with regard to the conditions and whether or not there would be any future potential for advising the ambassador with regard to any additional protective actions recommendations.

So those are focuses at this point today for the PST.

JIM WIGGINS: Okay, this is Jim Wiggins.

Just some general information. You may have heard
before that Chuck Casto and his team have been
working over in Japan with the ambassador and have
connected up with Bechtel operations, and they have,
Bechtel has come up with the design of a temporary
rig for pumping water from the ocean into the four
units. So there's trains of this pumping scheme.

Bechtel's also been able to locate the components for it, and the next step is once USAID would see clear to authorize the expenditures to get this stuff boxed up and sent in country from where Bechtel has found it -- you know, the combination, as I understand it, is the US and Australia -- but

moving it up front there.

1₿

1 🛭

We also heard from Chuck that, that there is some signs that the Japanese may be moving toward doing the same type thing. But those are, but I guess I would classify that as preliminary or unreliable information. It's sort of a presumption based on the fact that when people went shopping for the equipment in country in Japan, they became aware of the fact that Tokyo, the Tokyo Fire Department had already made arrangements to purchase some of this stuff up. So there may be something going on indigenously also.

Chuck reports that it's becoming more clear that the Ministry of Defense, the Japanese self-defense force, is making a more controlling hand in the response rather, and lieu of Tepco. That probably would be viewed, I think Chuck views that as a positive.

Another administrative matter we're working on is we, we know that Chuck's group can't go on forever. We need to start work on replacements that we need to send over. So we talked to him about skill needs, and we're in the process of identifying who could meet those skills, who has the opportunity or the wherewithal to get over there. We're even

looking from the top down starting to see if there's people who could go in and pinch-hit for Chuck or be a deputy to him in his current role. Right now he's basically a 24/7 individual. He's getting very little sleep, and he's holding up, but not for long.

That's it. Any questions?

MIKE FRANOVICH: Jim, this is Mike

Franovich. Can we kind of bend our questions -- you

covered three specific areas, the understanding of

the plant status, the PMT, and in-country activities.

And I just want to start in the beginning with the

plant status to try to see if we have a common

understanding of where we think the plants are versus

what we're hearing from the Japanese.

2₿

The, Unit 4 spent fuel pool, we're now saying 'condition not known.' We were allowed to believe for days that the pool is dry and we hear reports that there's been visual checks that there's water over the fuel. What, what is our take on that, those reports that we're hearing from Tepco and those, and NISA?

BRIAN McDERMOTT: Yeah, this is Brian McDermott. I believe our best information is that the pools are dry. Back a few days ago, the Tepco folks were trying to point to some photographs and

the glint the photographs and some video they had -I think it's probably some of the footage we're
seeing on TV -- that that was an indication that
there was water in the pool. However, the team on
the ground, I guess, got to view that video and they,
they didn't agree.

As time has gone on, there's been nothing done to put water in that pool, and as far as I know, you know, there, there's no more steaming visible from the, from the Number 4 spent fuel pool. So that leads the team to continue to believe that the pool is dry.

MIKE FRANOVICH: That it's dry even though it's steaming?

10

11

12

13

14

15

16

17

18

19

20

21

22

2 3

24

2 🛱

BRIAN McDERMOTT: There's no steam evident from the Number 4 pool.

MIKE FRANOVICH: Oh, no steam.

BRIAN McDERMOTT: There has not been for some period of time.

MIKE FRANOVICH: Okay. I'm interested in that. And the reason I'm asking this is the Executive Team has a set of priorities based on plant conditions, station conditions. And I'm trying to compare the two, what I'm hearing about what the priorities are for the way they're, the folks on the

ground are tackling things.

Can you hold on for one second. Let me close the door. Sorry about that. There's an echo on the line. I'm not sure where it's coming from.

I, I guess what I, what we're hearing is

-- what is ET's understanding of the strategy or

priorities that Tepco is applying today, you know,

across the station in terms of which units? Because

we've been hearing Unit 1, now they're losing water

in the pool, and that's becoming a high priority,

much higher than Unit 4.

JIM WIGGINS: Well, our priority is cooling Units 3 and 4.

MIKE FRANOVICH: Three and four.

BRIAN McDERMOTT: Mike, they're all a

problem.

MIKE FRANOVICH: No. I realize that, but

_

10

11

12

1 B

14

15

16

17

18

19

20

2

22

23

24

25

BRIAN McDERMOTT: And we don't have any confirmation. I mean, there are some media reports of Tepco trying to spray water into the Unit 3 spent fuel pool. However, we've not seen very much on that. We're getting next to no information out of Tepco other than the press releases that, that everybody can pull off the web.

MIKE FRANOVICH: Okay.

SCOTT MORRIS: So, in terms of the condition of the pool, our indications were that, that 4, you know, may already done, but we're not sure. It may be cooling itself. It may be blowing apart.

MIKE FRANOVICH: Okay.

BRIAN McDERMOTT: You know, the, the dose rates coming off the stuff in the yard are rather high.

MIKE FRANOVICH: Yeah.

BRIAN McDERMOTT: But that, that's what we know.

MIKE FRANOVICH: Okay. If --

BRIAN McDERMOTT: Other than the spraying effort that you've seen on the TV, we have no other information about any efforts to put water in the pool.

MIKE FRANOVICH: Oh, okay.

BRIAN McDERMOTT: And that is of concern.

MIKE FRANOVICH: I, I thought at the

first conference --

10

1

12

13

14

15

16

17

18

1

20

21

2

23

24

25

BRIAN McDERMOTT: I (inaudible) get information about the, the temperature of those pools if you will, of how hot they are relative to the

things around them. It's somewhat obscured. We did hear, I want to say it was yesterday or the day before, that the roof of the reactor buildings here in, in Japan are not only the corrugated metal but they also have a layer of concrete, and so it is thought that on the Unit 1 pool, that that concrete roof had, had dropped down onto the refueling floor deck.

So it may be even more of a challenge to get water in that pool because you put a cap over it essentially when if thing drops down.

1 E

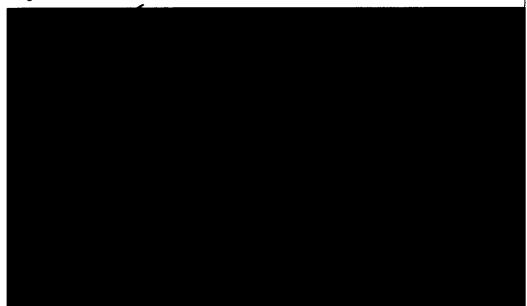

2 B

MIKE FRANOVICH: Yeah, because I've been hearing (inaudible) on Unit 1 and that their priorities for Tepco based on their press conference last evening with the Unit 3 was number one, the spent fuel pool. Unit 1 was going to be a priority for them and that they were going to use the Tokyo Fire Department to do the water cannon approach on that unit, while SDF was going to do the water cannon approach on Unit 3, and that they couldn't do Unit 3 and 4 together because there's some physical impediment to allowing them to work on both at the same time.

So when I hear that, I'm like I'm looking at the results here, and that's why I'm asking

BRIAN McDERMOTT: We're, we're hearing media reports as you are, and we're assessing other information as we get it, Mike.

MIKE FRANOVICH: Okay. I mean, it's not just --

11

12

13

14

15

18

17

18

19

2 þ

21

22

28

24

25

So we're, we're taking our lead off of what were getting from the team out there. So what they're saying on the press, I don't know that we know that exactly.

MIKE FRANOVICH: Okay. Let me turn to a dry pool that was mentioned.

Brian, you mentioned there was some assessments about zirc fire and things like that.

Have, has our group or General Electric done any kind of assessment on Unit 4 pool with the -- I think they have like 1,200 bundles in the pool. If it's dry, would we expect to see a fire in that configuration with that kind of load?

BRIAN McDERMOTT: Yeah, we're getting, it's being worked right now. The research is looking at that. It's trying to confirm also that the, the way we want to fight this is the right way also.

They're working with their contractors to, to understand more about the zirconium fires. They already have that question on the table and are pursuing it.

time.

MIKE FRANOVICH: Feedback from the in-country team about the unit status and approach here, have they gotten any information about the power, off-site power supply?

BRIAN McDERMOTT: We've heard

preliminarily or -- I wouldn't take this to the bank

-- but progress is being made. It may be here on

Saturday, and I don't know whose time.

MALE PARTICIPANT: That's Japan time.

BRIAN McDERMOTT: We assume it's Japan

MIKE FRANOVICH: Okay.

BRIAN McDERMOTT: But once you get power to the site, there's no, we have no current level of confidence that they'll be able to do anything with it. They don't have an assessment of the plant conditions, what the distribution system internal to the plant looks like, how it's going to affect where the rad levels would be that they would need to get through to access the points where they could tie in, et cetera, et cetera.

MIKE FRANOVICH: Okay.

1

1

19

20

21

22

23

24

2 🗄

BRIAN McDERMOTT: It may not be the panacea that one might hope.

MIKE FRANOVICH: I'll, I'll just turn it over to anybody who has questions on plant status.

BILL ORDERS: This is Bill Orders. I have one question. Have we heard anything about that common spent fuel pools? Are we worried at all about that one?

BRIAN McDERMOTT: We're cognizant of the fact that there is a common wet pool behind Unit 4 and the status that we saw this morning from the company indicates that they've done inspections of that and they're, they're paying attention to it. Of all of them, that's the easiest to take care of. So it didn't, it doesn't sound like that one was going

to be a problem.

1(

11

MALE PARTICIPANT: That's a below grade.

BRIAN McDERMOTT: It's below grade. It's

all also probably cooler fuel, but we need to --

JIM WIGGINS: Yeah, it's -- anything

else? We have another commitment we have to move to.

Any other questions?

(No response.)

MALE PARTICIPANT: The PMT --

SCOTT MORRIS: We'll try to keep you apprised after the calls.

MIKE FRANOVICH: Hold on. Not yet. Not yet. The PMT -- are you saying you need to go now, there's something going on? I didn't quite understand what you're saying, Jim.

CHARLIE MILLER: Mike, you're breaking up on us.

MIKE FRANOVICH: I'm asking --

JIM WIGGINS: Ask your question.

MIKE FRANOVICH: -- the PMT -- I'm going to talk about PMT for a moment. Your NRR survey results, if we have a more current best estimate based on those surveys, are you reconsidering issuing a press release on what those actual resorts are to share that with the public?

MALE PARTICIPANT: We're not, we're not there yet. BRIAN McDERMOTT: We heard about every other word from you. JIM WIGGINS: He said, he said, if we have a re-reckoning of the doses and things like that, might we re-, update the press release to indicate so. So that would certainly be a decision we'd have to make when we got that information, but 10 we're not there yet. 11 BRIAN McDERMOTT: We're continuing to 12 monitor in country. JIM WIGGINS: Yes, we're doing the doses 18 in country. We're working with DOE, who's doing some 14 of out and the US stuff in the territories. That's 15 current, folks, the US and the territories. 16 17 MIKE FRANOVICH: Okay. Okay, I'll leave it at that for now. 18 19 JIM WIGGINS: Thank you. 20 Anything else? MALE PARTICIPANT: Yeah, when the next 21 2 2 call? BRIAN McDERMOTT: It should be eight 2 🛭 o'clock tomorrow night unless something changes. 24 JIM WIGGINS: Tonight -- or, sorry --2 🛱 **NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS**

it's during the day now.

It's 1800 today.

MALE PARTICIPANT: All right. Thanks.

doesn't matter who's the structural engineer. It just matters that we have one. (Audio interference.) MIKE WEBER: Some of those of those skill sets, I don't know that we have, JIM WIGGINS: Yeah. MIKE WEBER: I think I have that. JIM WIGGINS: It depends on what. Pardon 10 me. MIKE WEBER: They have that in country 11 12 already. JIM WIGGINS: And the (audio 1B 14 interference). MIKE WEBER: You got it. 15 JIM WIGGINS: 18 If you want -- (audio interference). We could probably put 17 our hands on people who know the signatures (audio 18 interference). That's a lot taller than --19 2 Q MIKE WEBER: Yeah. Yeah. 21 JIM WIGGINS: It may not be us. It may be some of the NTE types so out in the industry. 2 2 B MIKE WEBER: Yeah. 24 JIM WIGGINS: So it depends on that 2 # (inaudible).

1	MIKE WEBER: Absolutely. That's right.
2	JOHN MONNINGER: Hey, Jim, Mike, this is
3	John Monninger.
4	JIM WIGGINS: Yeah, the Chairman wants to
	talk to Chuck and us, and you're Chuck.
ļ	JOHN MONNINGER: Okay. All right.
	Chuck's on his way to (audio interference).
Į	JIM WIGGINS: He's where?
¢	JOHN MONNINGER: I'm sorry.
1	JIM WIGGINS: Yeah, Chuck, we thought,
1	was going to a meeting. Right?
1	JOHN MONNINGER: Yeah. He's in a
1	high-level meeting right down at a place called Kanti
1	(phon) so, whether the reception's better what, I
1	don't know.
1	JIM WIGGINS: He's probably engaged in
1	(audio interference).
18	MIKE WEBER: How are you doing, John?
19	JOHN MONNINGER: We're hanging in here.
20	Hanging in here.
2	MIKE WEBER: Are you getting some rest?
2	JOHN MONNINGER: Yeah. Yeah.
23	MIKE WEBER: That doesn't sound like a
2 1	yes.
25	JOHN MONNINGER: It's a yes. That's
	NEAL R. GROSS
	COURT REPORTERS AND TRANSCRIBERS

quite a few activities going on and quite a lot of coordination, meetings, so everyone's hanging in there pretty good.

MIKE WEBER: You're still, you're staying put; right? You're not deploying out to some other location, or are you still working on that?

JOHN MONNINGER: No. We are staying put as far as we know. We did get information earlier today from Tepco with what we believe was an invitation to have us inserted into their EOS. We pursued that lead and what that lead turned into was me being at Tepco's corporate headquarters here for, actually it was going to be a meeting with the president and CEO of Tepco. But we gave them a time and they weren't able to support that time. So it's looking like that meeting will be tomorrow, but it wasn't a meeting at their emergency facilities.

1 B

MIKE WEBER: Oh, okay. So they're not -the idea that we were going to put a person in their
EOC or EOS --

JOHN MONNINGER: Right.

MIKE WEBER: -- is no longer an option. Okay.

JOHN MONNINGER: We would, we would like it if that comes along. Maybe during this meeting

116 with their leadership, they will say, you know, as a result of this, we're going to do it. And we thought, in responding to their request, we thought their request was to head out to the facility, and we were ready. But it ended up being another meeting which they couldn't support. MIKE WEBER: And do they have a main facility that we're aware of, its, its location?

JOHN MONNINGER: We do not know where the location is, no.

JIM WIGGINS: An undisclosed location.

MIKE WEBER: Well, apparently they have one that was damaged in the quake. That was part of what we heard.

JOHN MONNINGER: Right.

1 þ

24

25

MIKE WEBER: And they had some alternate location they were using.

JOHN MONNINGER: Right.

How are things back there?

MIKE WEBER: Okay. We're working on getting you some, some help from Bechtel.

JOHN MONNINGER: Okay.

BRIAN McDERMOTT: Exposed fuel rods -any significant update in terms of the plant status? JOHN MONNINGER: Not in terms of the

plant status. They are proceeding to use, you know, fire, the fire trucks, et cetera, run them in, run them out, et cetera.

Most recently, though, we've heard that, through the Japanese Fire Department, et cetera, they are currently also trying to pursue some type of pumping system, so we don't really have details on that, but --

HOO: Chairman Jaczko is coming up to the ET conference.

Chairman Jaczko, are you there, sir?
CHAIRMAN JACZKO: Yes.

JIM WIGGINS: Hi, Mr. Chairman. This is Jim Wiggins. Chuck's in a meeting and John Monninger's on the line.

CHAIRMAN JACZKO: Okay. Great.

Hey, John, how are you?

JOHN MONNINGER: Hello, Mr. Chairman.

Good, good. Thank you, sir.

JOHN MONNINGER: To tell you the truth, I think the biggest weakness of -- if there is a weakness -- but the biggest weakness on our team would be the notion of logistical support.

CHAIRMAN JACZKO: Okay. So --

JOHN MONNINGER: So we're --

CHAIRMAN JACZKO: I'm sorry.

JOHN MONNINGER: You know, we, we are very good at our analysis of the reactor and recommendations, et cetera but, you know, the knowledge of these various organizations and pulling them together, we're really sort of the focal point now, and there's multiple, multiple organizations interacting with us.

CHAIRMAN JACZKO: Got it.

JOHN MONNINGER: So the logistical support isn't, you know, great. CHAIRMAN JACZKO: Okay. It's in progress to get you some help in that regard. JOHN MONNINGER: Okay. CHAIRMAN JACZKO: So they should be coming. I don't know how long, but the way those things move, I, I wouldn't be surprised if it wasn't fairly soon. Who would you want me to send them to? Would I send them to you? JOHN MONNINGER: Send them to me or to Chuck. CHAIRMAN JACZKO: Okay. Good. I'll double back with Admiral Donald and express to him a sense of urgency with that. JOHN MONNINGER: Right. CHAIRMAN JACZKO: Is that okay? JOHN MONNINGER: Yes. CHAIRMAN JACZKO: Okay. JOHN MONNINGER: Now, one of the things Chuck had mentioned to me, you guys were thinking about a shift change, a shift change --CHAIRMAN JACZKO: Um-hmm. JOHN MONNINGER: -- in a, in an earlier time frame.

10

CHAIRMAN JACZKO: The, how, how you all doing? Do you need more help?

JOHN MONNINGER: I, I think everyone is very, very interested in the project. Everyone is very busy, I think, at the same time, I think, not knowing which, what would come out of the logistical support services. You know, things could ease up considerably or maybe not.

CHAIRMAN JACZKO: Okay.

JOHN MONNINGER: If there was a like-for-like, one-for-one replacement, I'm not quite sure any other team would, would do much better or much worse.

CHAIRMAN JACZKO: Got it.

JOHN MONNINGER: There's, you know, during -- we're actually running the heaviest during the day, and it's, you know, probably eight, nine people pretty much full-time during the day.

CHAIRMAN JACZKO: Are you getting rest?

JOHN MONNINGER: We, the team is getting rest, but I would say the majority of the team is getting rest probably about six hours a day with probably, you know, 15 to 18 hours. So maybe getting eight, but the other 16 or so, I heard they're probably engaged.

CHAIRMAN JACZKO: Okay. Okay. JOHN MONNINGER: Yeah. CHAIRMAN JACZKO: Well, you just tell me what you need and we'll get it for you. JOHN MONNINGER: Okay. CHAIRMAN JACZKO: If I send you more people, is that going to be a burden to you right now? JOHN MONNINGER: I think what I'd like to 10 do is chat with Chuck about it if, if possible. 11 CHAIRMAN JACZKO: Okay. 12 JOHN MONNINGER: And we would -- so we'd 1₿ get a proposal back or chat with Josh or chat with 14 the ET or get back to you. CHAIRMAN JACZKO: Yeah, go --15 16 BRIAN McDERMOTT: This is Brian 17 McDermott, John. We did get feedback from Chuck on composition of the team and staffing numbers, so 1 19 that's what we're working on back here, to arrange 20 for people to support that. 21 CHAIRMAN JACZKO: Okay. Good, Mike. MIKE WEBER: Yes. 2 2₿ CHAIRMAN JACZKO: So you have

team? **NEAL R. GROSS**

confirmation from Chuck about a way to supplement the

COURT REPORTERS AND TRANSCRIBERS

24

2 £

MIKE WEBER: Yes, and we know the skills, and we're off trying to connect with inaudible skills.

CHAIRMAN JACZKO: And that is, does that duplicate the efforts on logistical support that Admiral Donald discussed with me?

MIKE WEBER: Not, not the way I would understand logistics, Chairman.

CHAIRMAN JACZKO: Okay.

2 3

24

25

MIKE WEBER: You know, the -- I think when the military talks about logistics, it's movement of manpower and materials.

CHAIRMAN JACZKO: Yeah. Yeah.

MIKE WEBER: So if there's items, things, you know, widgets that the team uses, and more importantly, transport -- you might be able to hook helicopters up if you want to get up into the area or something like that.

CHAIRMAN JACZKO: Yes.

MIKE WEBER: You might be able to swing that. If he's talking about those large commands, they've got ground and air assets, you know, the, like if Chuck or a member of the team would want to do an actual flyover on the site or fly around to get some, you know, real eyeballs as opposed to what

we've seen in imagery. That's probably something that can work.

CHAIRMAN JACZKO: Got it.

Hey, John, can you make sure to communicate with the ambassador and his team that, that Admiral Donald and I discussed this and that I, I was comfortable with him working through his channels to help get that logistical support to your team?

JOHN MONNINGER: Okay.

1

11

CHAIRMAN JACZKO: And if you could just relay that to the ambassador, if the ambassador has concerns, if he would just let me know, and I'd be happy to discuss it with him.

JOHN MONNINGER: Okay. Yes, I will definitely do, do so.

Two cents on whatever the team is, or the composition.

CHAIRMAN JACZKO: Yes.

JOHN MONNINGER: You need people with a background in reactors, et cetera, but what you really need are individuals that are politically astute, you know, at high levels, et cetera. These meetings that we're going to are with, you know, predominately with the highest levels of the Japanese

government.

CHAIRMAN JACZKO: Let me ask you this.

Let me ask you this, John. Are you, are you not getting, are you sensing that they're not listening to you because they perceive you not to be sufficiently high-ranking?

JOHN MONNINGER: No, not at all.

CHAIRMAN JACZKO: Okay. Good.

JOHN MONNINGER: As a matter -- yeah, but I, I think in terms of some, some of our individuals maybe want to go in the technical details versus, you know, the big picture or whatever.

CHAIRMAN JACZKO: Got it.

JOHN MONNINGER: We need someone who can really interface and --

CHAIRMAN JACZKO: Got it.

JOHN MONNINGER: -- knows organizations, protocol, that kind of stuff.

CHAIRMAN JACZKO: Okay. Well --

JOHN MONNINGER: That's my two cents.

CHAIRMAN JACZKO: Good. No, that's good.

That's helpful.

Mike, do you have that? Are you thinking about that in terms of how you're building the team?

MIKE WEBER: Absolutely.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

JIM WIGGINS: Yes we are.

CHAIRMAN JACZKO: Good. Excellent.

So, you can take that back, John. We've got that. We're working on it.

JOHN MONNINGER: Okay.

1 B

CHAIRMAN JACZKO: Anything else that, that you need from me right now?

JOHN MONNINGER: I don't think so. You know, we've been getting phenomenal support from the embassy. We've had great interactions with the government of Japan and, you know, anything we ask for is, you know, comes right through. The support we get from the ET, the PMT headquarters, everyone has been phenomenal.

CHAIRMAN JACZKO: Good. Hey, John, do you have or could you maybe get a message to the ambassador? And again, I don't want to take you away from your, I don't want overburden you with new work. But if you have recommendations of anyone I should be calling just to relay the importance of the situation, the urgency of the situation, and the importance of working with our team, if there's someone you think I should do that with, let me know. And if you want to consult with the ambassador as well, I'd be happy to make those calls.

JOHN MONNINGER: Okay. Definitely, we will, we will do that.

CHAIRMAN JACZKO: Okay.

JOHN MONNINGER: I'll get a message on to the ambassador also.

CHAIRMAN JACZKO: Now, if, if the folks, the folks that Admiral Donald is rounding up, if they are able to get to you during the night hours, would you want them, or would you want them first thing in the morning?

JOHN MONNINGER: Probably more first thing in the morning.

CHAIRMAN JACZKO: Okay, Good.

JOHN MONNINGER: Chuck, you know, he's been going, you know, a couple more hours than I have been going.

CHAIRMAN JACZKO: Okay.

JOHN MONNINGER: So I think we really want to strategize with them separately.

CHAIRMAN JACZKO: Okay. Good.

JOHN MONNINGER: Yeah.

CHAIRMAN JACZKO: Good. All right, well, John, keep up the good work. You guys are doing a phenomenal job. I will tell you the work you're doing is appreciated at the highest levels of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

government and, and people are ready to do whatever they can to help you. And you tell us what you need.

Okay?

JOHN MONNINGER: All right. Sounds great. Thank you very much, Mr. Chairman.

CHAIRMAN JACZKO: Thank you. Goodbye.

MIKE WEBER: John?

JOHN MONNINGER: Yeah?

MIKE WEBER: Just, we've got one question coming up from the team. Apparently, Lockheed is relaying to us that they have located a remote-controlled helicopter that can lift 5,000 pounds. Is this something that the team --

JOHN MONNINGER: That is phenomenal.

BRIAN McDERMOTT: Did the team request.

that?

10

11

12

13

16

17

18

19

20

21

22

2

24

25

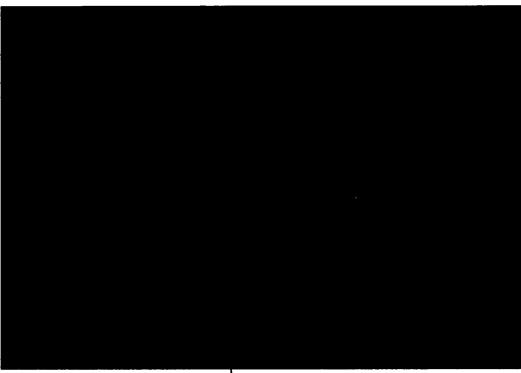

JOHN MONNINGER: The team -- okay, there's two things. There was a request for robots, unmanned stuff, but the notion was much smaller in terms of being able to crawl through the building for rad releases and all that kind of stuff. So that's one aspect.

The other aspect of remoteness was the aerial drones, helicopters, et cetera. That was to be used for photography, infrared, all that kind of

jazz. So they were the two official requests.

But no official request came in for these remote helicopters or bulldozers, et cetera, that could move equipment, but that is really what is needed.

BRIAN McDERMOTT: Right.

MIKE WEBER: Yeah.

2 🖁

So, but, you know, I would think without a doubt, I mean, the laying of this piping, you know, for the sprays is, you know --

MIKE WEBER: Well, it sounds like something you guys would want. Do we need to loop back to the director of the DART team to get that request made through USAID?

JOHN MONNINGER: Yeah. Yeah. So, so, who is the, who has the remote helicopter? Or we'll just have them call back to the ET and coordinate this, or?

MALE PARTICIPANT: Where is the remote helicopter?

MIKE WEBER: Yeah, it's Lockheed Martin has it. I don't know the location.

MALE PARTICIPANT: I can try to reach the (inaudible), so I don't know exactly where it's at.

I'd want to make sure we (inaudible) request -- we'd need one, two --

MALE PARTICIPANT: But the DART has the request.

MIKE WEBER: The DART has to request it.

It can't be -- right, John? It's got to go through
the leader of the DART --

JOHN MONNINGER: Yeah.

MALE PARTICIPANT:

JOHN MONNINGER: Yeah.

MIKE WEBER: It, so if you push it

through to and then we can connect to whoever in DART or USAID that needs to talk to somebody who has the details back to the liaison team, and we'll make sure they get connected to the right people at Lockheed.

JOHN MONNINGER: Okay. There's actually a really good guy up here named Joe Young who had been working the, the pumping project. So he's, he's actually downstairs at the Operations Center. I should be able to engage him also.

MIKE WEBER: Okay. Great.

JOHN MONNINGER: Can I, can I run you guys backwards?

MIKE WEBER: Sure.

JOHN MONNINGER: Is it a good time to provide feedback on staffing or membership, that kind of stuff, or get a little more sensitive, or do you want me to do it later?

JIM WIGGINS: Say what you want to say, John.

JOHN MONNINGER: Yeah, so, you know, you

MIKE WEBER: Yeah.

JOHN MONNINGER: I mean, he's got the phenomenal knowledge. He's got the political savvy. You know, that's the type individual we need.

MALE PARTICIPANT: (Off mic).

JOHN MONNINGER: You know, our, our reactor engineers, inspectors, et cetera, you know, that doesn't work. We need the strong leadership, communications, and technical knowledge. Technical knowledge is only 25, 30 percent of this.

JIM WIGGINS: Yeah, well, that's, like I said, that's part of the bid spec for the, to fill the roster.

JOHN MONNINGER: So --

MIKE WEBER: I think we can work on that.

JIM WIGGINS: Yeah.

JOHN MONNINGER: I mean, that's for quite a few members of the team.

JIM WIGGINS: Okay. So let us do it. You can grade us on how well we did too.

JOHN MONNINGER: All right.

MIKE WEBER: All right, John. Thanks.

JOHN MONNINGER: For what what it's

worth, that's my two cents.

MIKE WEBER: Yeah, Michelle knows that, and that's what she and Nader were off focusing on. So, okay?

JOHN MONNINGER: Okay. Okay, sounds great, guys. All right.

JOHN MONNINGER: Thanks. Goodbye.

(CONFERENCE CALL INITIATED.)

02:27:30/02:47:59

(Standby.)

MIKE WEBER: Good morning, Chuck.

CHUCK CASTO: Good, good night.

MIKE WEBER: It's only midnight up there.

You've got the next morning.

CHUCK CASTO: Yeah.

MIKE WEBER: It's a fresh new morning (inaudible).

CHUCK CASTO: Oh, yeah.

MIKE WEBER: What can we do for you?

CHUCK CASTO: Okay. I guess we just concluded a couple-hour meeting with Tepco and the regulator and it was definitely the most productive meeting we've had this week.

17

10

1

12

1 3

14

15

1

18

19

21

22

23

25

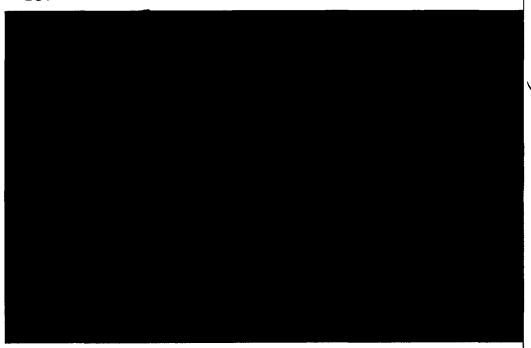

And they, they were very receptive. And in fact, right now, we're trying to put together a meeting in Okura Hotel with the pump engineers from Tepco and the regulator, our guys, and Bechtel. That

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

5

was supposed to start -- it's running a little bit late, but it was supposed to start at midnight.

Amazingly enough, just as we went into the hotel to start the meeting, of all people checking in, it's a bunch of media people with cameras, so that caused some complications. But, you know, what timing, at midnight. Who would have thunk it?

1(

2 5

In the morning, I think we're doing some kind of assessment, some BDA, we're having some BDA specialists look at the pictures and give us an assessment of building damage. And we're going to work with Tepco to go through that, to talk about the structural integrity of the pools. And there, there's some concern about the leakage out pools, so talked about dolomite.

But the main overall message is that Tepco and the regulator were very receptive to the, to the information and very willing to work with us. MIKE WEBER: Okay. Anything else? Any other -- anything we can do for you? CHUCK CASTO: The sand calculation, I think, somebody's pumping that to the Japanese, I think. JIM WIGGINS: Okay, we'll check. Do you 10 think that's coming from here? 11 CHUCK CASTO: Yeah, I think it is. Brooke sent an email into --12 13 Help me out, Kirk. He, he's checking to see where the email 14 15 went to. 16 JIM WIGGINS: Okay. 17 CHUCK CASTO: I think she sent it to the 18 HOO asking for that same calculation, structural integrity. 19 20 Who'd she send it to? 2 MALE PARTICIPANT: (Off mic). 22 CHUCK CASTO: Yeah, who should we send 23 this request to in the HOO? 2∄ MIKE WEBER: You can just send it to to 25 HOO.HOC@NRC.gov.

CHUCK CASTO: Okay. So someone yesterday, I think it was, or maybe it was today, did a calculation of filling the spent fuel pool with sand and what, what that did to the structural integrity of the pool.

MIKE WEBER: Okay.

CHUCK CASTO: That's the calculation we need sent to the, to Tepco.

MIKE WEBER: Got it.

24

25

CHUCK CASTO: Go ahead.

BRIAN McDERMOTT: We're trying to get Dan Dorman on the next reasonable light.

CHUCK CASTO: Okay.

BRIAN McDERMOTT: The expectation is Dan would be there and would work with you, so over the next -- as soon as he gets there obviously -- for the next several days once he's there. And that would give him and you some time to get to work together and also for him to earn the confidence of the ambassador.

CHUCK CASTO: Okay.

BRIAN McDERMOTT: And then we'll reassess where we are. We're also working on the longer-term turnover but, you know, longer-term like early next week, for other members of your team.

CHUCK CASTO: Oh, for PEG?

BRIAN McDERMOTT: For a period of time,

there would be augmentation of your team and then we would be in a position to assess, do we want to pull people back? Is this timely? Or do we need to leave them there for some time to support the ongoing needs as you see them?

CHUCK CASTO: No problem.

BRIAN McDERMOTT: Okay.

JIM WIGGINS: At any rate, you'd better get some sleep.

CHARLIE MILLER: Chuck, I'm --

CHUCK CASTO: Okay, we'll talk to you

sometime --

JIM WIGGINS: Hold on. Hold on. Not just yet. Stay awake for a minute.

CHARLIE MILLER: I just wanted to make you aware that we had information through Naval reactors that they've done some conservative calculations

(CONFERENCE CALL INITIATED.)

02:47:55/02:57:26

CHARLIE MILLER: Hey, John, are you

there?

JOHN MONNINGER: Hey, Charlie. Are you

there?

10

11

12

1 B

14

15

16

17

18

15

2 D

2‡

22

23

24

25

CHARLIE MILLER: Hey, yeah, I'm here.

JOHN MONNINGER: I'm not sure, maybe

Laura already briefed you guys and, and, and if not,

I assume she'll come in. But one thing I wanted to,

to, to bring to your guys' attention was we're going

to raise, tomorrow, the, the topic of two massive

cement pumper trucks in China. Japan currently has

two that they're going to use on this project, and

there's two more in Japan. That's where Tepco has

found two others.

But the, the proposal, the thought would be that somehow, we'd reach out to China for this equipment and work the logistics out through the military, US military, or whatever, to potentially get it here to Japan.

CHARLIE MILLER: Okay. Now this flows from the Chinese offer to help?

JOHN MONNINGER: No. No. I have no idea.

CHARLIE MILLER: Because there's sensitivity on this end about that and what Japan thinks about that. It' through the Embassy, so you'd know better than me.

JOHN MONNINGER: Yeah. So, you know, I don't know if they have offered help or not or if they been asked for --

CHARLIE MILLER: Yes. IT, IT has told me that they made an early offer a few days ago.

JOHN MONNINGER: Yeah. But, and, and I haven't talked to Chuck or anything about this.

CHARLIE MILLER: Okay.

10

11

12

1

14

15

16

17

18

19

2₫

we'll, we'll mention it tomorrow here at the embassy. You know, I have, I, I don't know who, you know, the NRC counterparts in China and whether the Chairman has relationships with them.

CHARLIE MILLER: Okay.

JOHN MONNINGER: But someplace, we have to start. I'm not asking for anything today, but I

MALE PARTICIPANT: Just a heads up, right?

JOHN MONNINGER: It's, it's a heads up that -- it's a little bit above my pay grade.

BRIAN McDERMOTT: John, this is Brian McDermott.

JOHN MONNINGER: Yeah, Brian?

BRIAN McDERMOTT: Hey, we got a request

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

from Josh Baskin regarding a statement that might be made regarding the level of activity that we should expect to see at the site. So I have Laura working on that now. She told me you had already gone to bed, so I take it you're sleep-talking.

JOHN MONNINGER: Yeah, I am.

BRIAN McDERMOTT: Is there somebody we out to bounce that off of that's working the back shift?

JOHN MONNINGER: I, I heard the words "site activity" and I can interpret that to be people running around, or I can just interpret it to be radiation.

> BRIAN McDERMOTT: People running around. JOHN MONNINGER: Right.

-- Chuck Casto was in some, some very high-level

NEAL R. GROSS

JOHN MONNINGER: That, that, that topic

sensitive discussions --

BRIAN McDERMOTT: Okay.

JOHN MONNINGER: -- on personnel that I believe included the Prime Minister and all these ministries and the ambassador, et cetera. And I was not at the meeting, but Chuck debriefed me afterwards.

JIM WIGGINS: Other than the control

NEAL R. GROSS

2 5

COURT REPORTERS AND TRANSCRIBERS

room.

2 Ø

JOHN MONNINGER: Yeah, yeah. I mean, they're, they run in the control rooms back and forth occasionally, but they're not really manning the control rooms.

Actually, that's one thing interesting, the whole issue with AC power. We talked to Tepco today, why they want the AC power, and it's to get the control room up and running for instrumentation primarily. And then they want to see, you know, what kind of motors they can get going. They want to get control room, HVACs, ventilation going, that kind of stuff.

BRIAN McDERMOTT: Okay.

JOHN MONNINGER: But no, I, I think we do not believe that people are unnecessarily hanging -we're not aware of any other activities there, of course -- but we don't believe they're unnecessarily hanging in close to the site. I think, to the contrary, you know, they have them as far away as possible, and there's a subset of them that would like to get much, much further away.

BRIAN McDERMOTT: That's the concern;

JOHN MONNINGER: That's -- yes, 100 percent.

right?

23

24

25

BRIAN McDERMOTT: Okay. Got it. We'll, we'll come up with the best we can on that. I mean, the only information we have is that, that one approach relative to Unit 3 spent fuel pool.

JOHN MONNINGER: Right. We met, we met with Tepco yesterday trying to figure out their long-range plan. They have one priority: Unit 3.

And once they get done with that, they'll determine the next priority.

BRIAN McDERMOTT: Okay. Do we know who is executing that one plan on, on the ground?

JOHN MONNINGER: We --

BRIAN McDERMOTT: We talked about the fire department versus Tepco versus defense force.

JOHN MONNINGER: Yeah, and my -- no, we don't know. But I think more and more, it's going to be more defense forces coming --

BRIAN McDERMOTT: Yeah.

JOHN MONNINGER: Yeah, I mean, what's --

I think we've only had two meetings with Tepco, the meeting yesterday where they said they didn't need any help and everything's in full control, under full control, and then the meeting today with Laura on the phone. That's been the first two interactions.

BRIAN McDERMOTT: All right, John.
Please get some sleep, guy.

CHARLIE MILLER: I'll make sure that everybody here knows that (inaudible) -- John.

Thanks.

25

JOHN MONNINGER: Yeah, so, I mean, you know, we don't want to say anything about China outside the NRC. I think we've got to figure it out with the ambassador and the embassy here. And maybe you guys don't have a part, or maybe you guys do. I have no idea, but it's --

CHARLIE MILLER: Well, I think that's why
I'm asking you which end is going to get worked
because you're working in an embassy, and --

JOHN MONNINGER: Yeah.

CHARLIE MILLER: -- we just need to know from this end if there's anything that the NRC needs to be doing from Headquarters.

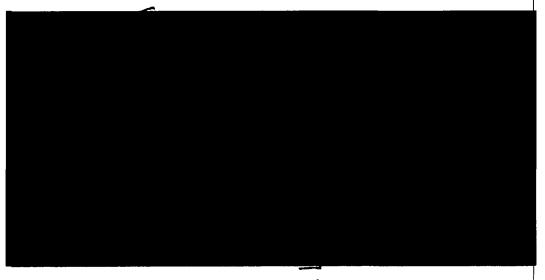

JOHN MONNINGER: I don't, nothing right now, but maybe eventually there is. Maybe there's a

call from, you know, the ambassador to the Secretary of State to China, and then maybe there's a call from the Chairman to the China NRC. Who knows?

CHARLIE MILLER: Right. But be aware, be aware that was (audio interference).

JOHN MONNINGER: Yeah. Yeah.

CHARLIE MILLER: Just be aware that I told you that there was a, there was an offer earlier.

CHARLIE MILLER: Ah.

JOHN MONNINGER: So, okay.

CHARLIE MILLER: Okay.

BRIAN McDERMOTT: All right, John.

Thanks.

(CONFERENCE CALL INITIATED.)

2:57:34/3:00:03

CHAIRMAN JACZKO: Hello. Hi.

JIM WIGGINS: Hi.

CHAIRMAN JACZKO: Let me -- I think we, we miscommunicated what I was looking for. I need to know two things. One, I need to know specifically what, what equipment, what, exactly what Chuck is telling people in Tokyo they need to do, so namely, what equipment they need. It's that very specific just list of things that needs to be done.

JIM WIGGINS: Okay.

CHAIRMAN JACZKO:

15

10

1

12

1

14

16

1

1

20

21

23

24

25

JIM WIGGINS: Yeah. We've been trying, given the time we've have, as close as we can get when you look at the four trains and what you have to do to to erect and maintain and operate it. You get down to the the low several hundreds.

CHAIRMAN JACZKO: Okay. I need, what I need -- I appreciate this, but I don't, I don't have the technical knowledge to agree or disagree. What I

just need is this on a piece of paper because I need to be able to hand it to the ambassador of Japan so it can get to the Japanese at the highest level. And it needs to be consistent with what Chuck is telling people. Those are the two, the two things.

JIM WIGGINS: All right.

CHAIRMAN JACZKO: So we, we have a tremendous opportunity here now. We have an ambassador who basically wants to be helpful and can pass information at very high levels to help move a logjam if necessary. So, but I just, I need to give them something specific, and it has to be consistent with what Chuck is telling people so we don't create confusion.

JIM WIGGINS: Okay, you're getting a piece of paper that will not give you, not give you the answer to the first question, and it doesn't give you the, pull the trigger on the second one.

CHAIRMAN JACZKO: I look at that, that's not what he need at all.

JIM WIGGINS: Right.

CHAIRMAN JACZKO: I just need those very specific things.

JIM WIGGINS: Okay. We'll have to work around and try to figure out a way to get it to you.

CHAIRMAN JACZKO: Okay. My meeting's at four o'clock.

JIM WIGGINS: Okay. We'll get with Chuck and find out what he's told them and go from there.

CHAIRMAN JACZKO: Okay. Thank you. I appreciate it.

JIM WIGGINS: Okay. Thanks.

2 þ

(CONFERENCE CALL INITIATED.)

03:00:14/03:03:01

JIM WIGGINS: Hey, Bill.

BILL BORCHARDT: Hey, Jim. Are you busy

right now?

JIM WIGGINS: Just a tad. Can we help

you?

BILL BORCHARDT: Well, I was calling and following up some information that the Chairman was needing for the meeting with the Japanese ambassador.

JIM WIGGINS: Yes. We just --

BILL BORCHARDT: Is there still something

coming down?

JIM WIGGINS: He just got off the phone with us.

BILL BORCHARDT: Okay.

JIM WIGGINS: We have something that we're giving him that doesn't cut it. We already know it doesn't cut it.

BILL BORCHARDT: Oh, okay. All right, sd there's nothing coming down immediately then.

JIM WIGGINS: Four o'clock today. It's

BILL BORCHARDT: Yeah, yeah, right. Okay.

JIM WIGGINS: We've got 35 minutes to get an answer in, on a piece of paper to where he has, and I don't know that's going to happen either.

BILL BORCHARDT: Well, yeah. All you could do is, if you email me with that, I can just hand him my BlackBerry, and I guess he can read it.

JIM WIGGINS: Oh, are you with -- well,

he wants to hand something to the ambassador.

BILL BORCHARDT: Yeah, well, that's not going to be able to happen because he's, he must have thought that it was already prepared. So I, I was riding down with him but then I got out. I'm going to take a different car. But I'm going to have to leave here in a couple minutes anyway. So, you know, I just, there's no way to get a piece of paper down to Massachusetts Avenue by four o'clock.

JIM WIGGINS: Now, Massachusetts Avenue is what, Bill?

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

(CONFERENCE CALL INITIATED.)

03:06:39/03:15:32

CHAIRMAN JACZKO: Hi, everybody. I know you're scrambling to fulfill the one request I have.

MALE PARTICIPANT: Yes, sir.

CHAIRMAN JACZKO: I have a secondary issue right now.

JIM WIGGINS: Okay. Go ahead.

CHAIRMAN JACZKO: And I don't want it to distract from the first issue, but can somebody get -- I just got an email from Tom D'Agostino indicating that possibly the runs that, that we're doing right now indicate that, for a worst-case scenario based the source term we've supplied,

Are you

aware of that?

JIM WIGGINS: We haven't heard that yet, sir. But it must be happening back in the teams. They haven't talked us. We've been focused on the other efforts.

CHAIRMAN JACZKO: Can, you can maybe then

HOOs, are you still on the line?

JIM WIGGINS: What do you need, Chairman? We can bring the PMT in here.

> **NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS**

This is the Chairman, Vince. This is a question about -- the Chairman's been talking to his counterpart in NNSA, Tom D'Agostino, and it has to do with this worst-case analyses, that there is a result that might indicate an iodine problem.

VINCE SALHAN: I just came on. I can find out.

HOO: Mr. DeVercelly on the line.

CHAIRMAN JACZKO: yes.

RICK DeVERCELLY: Yes, this is Rick

DeVercelly. I've got Chuck Casto on another line.

He's attempting to call into the bridge, but just in case it fails, I think he's on my other speakerphone here. I put him on a handset and hold it close if that's what you wish.

CHAIRMAN JACZKO: Hi, this is Greg

Jaczko. Why don't you take me and put me on a

separate bridge and put somebody from the Protective

Measures Team on that bridge. I don't interfere with

your talking to Chuck.

JIM WIGGINS: Okay.

Ops Officer, are you on the line?

HOO: Yes, sir.

JIM WIGGINS: Chairman, if you would identify yourself by hitting 0, the ops officer will transfer you to the back room to the ET chamber, and we'll get the Protective Measures member back there for you.

CHAIRMAN JACZKO: Okay. Good. Star-0, I'll do that right now.

JIM WIGGINS: Okay. Thank you.

All right, now we're waiting, waiting for Chuck. I guess he got his wake up call.

RICK DeVERCELLY: Chuck, can you hear them talking on the line?

CHUCK CASTO: Yeah, a little bit, I can hear.

RICK DeVERCELLY: Do you need me to hold the handset up closer?

CHUCK CASTO: No. Just go with it. See what's the question and you can can relay the answer.

RICK DeverceLLY: Okay.

Chuck is on the other line. Can ET bridge hear him talking?

NEAL R. GROSS

JIM WIGGINS: Yeah, we can hear him enough for this.

RICK DeVERCELLY: Okay. I'll let you guys communicate, and if you need me, I can provide support.

JIM WIGGINS: Chuck, we want to know what (inaudible) -- this was immediate. The Chairman said "an immediate need," immediate meaning he wants it in a half an hour, and it has to do with two or three things that you might be able to help us with. One is actually something that only you can help us with.

10

We need to know what, what the Chairman wants to know what have you told the Japanese.

(Conference call interrupted by ops officer and a caller on the bridge.)

(Extraneous content omitted.)

JIM WIGGINS: Okay, this is the ETs. Is Chuck on the line?

CHUCK CASTO: I can hear you. Go ahead.

JIM WIGGINS: The Chairman has an immediate need, meaning less than a half an hour but probably more like 10 minutes. We need to hand him a

NEAL R. GROSS

COLIDE DEDODEEDE AND EDANICODIDEDE

Can you help us? Chuck.

2 3

CHUCK CASTO: We work last night with, and showed the, the design, the conceptual design, and compared it to theirs. And then I, John Monninger and Jack Foster and them met in the Okura Hotel last night about midnight, 12:30 to go over the details of that design. I don't know if they provided them the list of equipment or not. But we went over details of that design with them.

I didn't go to the meeting, so I don't how much of that list they provided. John Monninger would be able to answer all those questions. But we told them that this is the design you need to implement, and that's all I know other than, and how many people it would take. I, I don't know have idea how many people it would take. I don't know if we told them that.

JIM WIGGINS: Okay. We're going to give them several hundred and go from there. You got a do it times four plus oversight and radiation protection, and you've got to do tag teams in order to get it in place.

CHUCK CASTO: We went through all that.

You know, we went through all that. Now, I don't know -- we have a list of equipment. I don't know if John actually gave it to them or not.

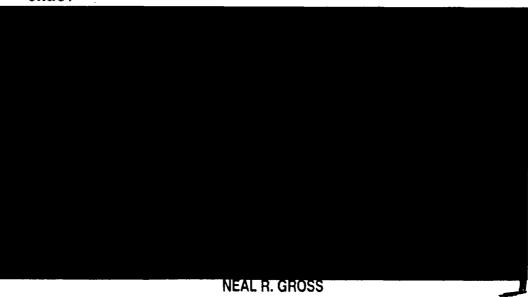

JIM WIGGINS: Yeah, we have the equipment also. I guess, I guess we're going to have to wake up John then.

 $\label{eq:rick} \mbox{RICK DeVERCELLY:} \quad \mbox{Once this is done, I} \\ \mbox{can call John and get back to you.}$

2 B

MALE PARTICIPANT: Do you want me to call John now?

JIM WIGGINS: Okay. Let's, let's do that.

COURT REPORTERS AND TRANSCRIBERS

we provided them.

JIM WIGGINS: I think this is more like specific tasks -- 'You ought to be doing X, you ought to be doing Y, you ought to be doing Z.'

CHUCK CASTO: I think there was, I think just getting water in the spent fuel pool was the primary instruction.

JIM WIGGINS: Okay. That's good enough.

CHUCK CASTO: I can't remember anything,
specific tasks, of anything else that we told them to

JIM WIGGINS: That's, that's good enough, Chuck. Thanks.

MALE PARTICIPANT: Okay, we've got John Monninger on another line.

JIM WIGGINS: Okay. Get them on this one.

Chuck, if you want to drop off, that's fine.

CHUCK CASTO: I want to listen to this.

RICK DeVERCELLY: Chuck, Chuck doesn't

need to go. We've got another phone that we're going
to bring up close.

JIM WIGGINS: All right. Get Monninger in.

24

25

The call focused on us sharing with the Japanese our system that had been, you know, by Bechtel and company for the proposed spent fuel cooling system. Also, the Japanese shared their proposed system with the team. There were discussions back and forth on the merits and any potential engineering areas of consideration in those proposed designs.

In the end, Tepco indicated that -- well, first off, Tepco said this was the first time they had heard about the US-proposed pump system. We said that is probably true. You know, however, we had been working or trying to work with, you know, Tepco for a while, and this was potentially the second meeting. But then we shared with them that this system had been developed through the consultation of NISA and NETI over the past, you know, four or five days.

JIM WIGGINS: Yeah, okay. But John, just cut to it. Have we given them anything in paper, any hardcopy, anything in terms of this design?

JOHN MONNINGER: No. We haven't given them any hardcopy pieces of paper.

JIM WIGGINS: We talked them through it?

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

JOHN MONNINGER: We, we talked them through it. They gave us paper. They gave us paper of their proposed design.

JIM WIGGINS: Okay. Now, if we were to give the Bechtel drawing that I'm looking at plus the bill of materials that we think our RST has, would that pretty much be consistent with what you told Tepco? You would have walked them through that?

(No response.)

JIM WIGGINS: John?

JOHN MONNINGER: (Inaudible) the bill of lading for our design.

JIM WIGGINS: Yes.

JOHN MONNINGER: They understand that all the equipment in the Bechtel design is being put together and shipped from Australia.

JIM WIGGINS: Yes. Yeah, yeah, I understand. But if we told them this is the list of equipment that would be necessary in order to implement that Bechtel design, you, you walked them through those things; right?

JOHN MONNINGER: No.

JIM WIGGINS: You must have told them you need four pumps per train, you need so much, so many feet of piping or hoses or whatever. Did you do

that?

CHUCK CASTO: We show them a rough drawing of that in the, in the Conte meeting.

JOHN MONNINGER: And, and we told them that our system that was developed included four trains, 700 meters of pipe, you know, four submersible pumps, whatever, but we did not ask them to provide any of that. He said that's what's being shipped up.

JIM WIGGINS: Okay. Good. Any other activities beyond that, that we had asked for or told them that they ought to be doing?

JOHN MONNINGER: No. We didn't ask for anything. We offered to provide assistance to them for the design.

JIM WIGGINS: Did we, did we --

JOHN MONNINGER: There are two --

1

2

JOHN MONNINGER: As we understand that,

they are an experienced engineer company. We see their design that they're proposing, there, there is a lot of very similar aspects to their design and the design we are proposing. And it looks like it has merit.

There were questions -- what goes first?

We said, you know, in our opinion, it makes sense

for them to continue their design and it makes sense

for us to continue trying to get this equipment up

here from Australia.

JIM WIGGINS: Okay. All right --

JOHN MONNINGER: If, in the end, this equipment gets up here and Tepco has already put in their system, then they could have this other stuff setting aside to do whatever they wanted to do in the long-term.

CHUCK CASTO: This is Chuck. Let me say that Jim Trapp and them have told them all that we,

JIM WIGGINS: Okay, let me ask this.

Last one. Have you had any discussions or -- no -
do you have any guesstimate about the number of

people Tepco would have to have on site in order to

implement the options that you've suggested that they

consider or continue?

JOHN MONNINGER: In my discussion with them on the Bechtel design, there was no discussions on the number of people that were required, would be required in order to implement it, that or where those people would come from, in my three-hour discussion with them.

JIM WIGGINS: Do you have a -- now, if we, if we were to try to answer that question, which we're being asked to answer, are, the answer that we've worked for so far is we would anticipate that it, in order to do these four plus other things and manage it, have the HP support necessary to allow people to work in these high rad fields that allow the tag, to provide for tag teams to work this since you weren't going to have one team, have multiple teams, you were going to have multiple teams on multiple trains?

2 B

We were guesstimating that there would be probably the low hundreds that would be needed. Our, is that closer to being -- we don't want to be on the high side of right.

JOHN MONNINGER: I, I, I personally have not seen our system at all. I haven't seen the Bechtel write-ups and there was no discussions in the three-hour meeting that I had with them regarding

their power, regarding radiation control, et cetera.

What we did mention is we previously, earlier in the day, got information from the ET regarding a remote-controlled helicopter capable of carrying 5,000 pounds. We mentioned that anything that is done on the site, including this project, that that helicopter may be of interest to anyone working on these projects, but we did not talk about people, we did not talk about rad control, et cetera.

CHUCK CASTO: They talked about rad

control at konti with them, that they would have to

put up a shield, they would have to put up a

radiation shield first and then stage the people to,

to put in the sections of the pipe.

JIM WIGGINS: Yeah.

CHUCK CASTO: We, you know, I don't think we have an estimate on the number of people that it would put in there.

JIM WIGGINS: Unfortunately --

CHUCK CASTO: (Inaudible) the stay time.

We did talk to them about lead lining the fire trucks, putting lead on the side of fire trucks, improving the stay time.

JIM WIGGINS: Okay. Once we have the --

CHUCK CASTO: We've -- you know, one of

the things, Jim, Tepco wouldn't meet with us all week. And, and they canceled just yesterday, before we had this big meeting. They canceled the meeting that was scheduled to be with them. And we, we went to the Tepco meeting to meet with the Tepco people a number of times during the week, and only people who showed up were METI and the regulator.

CHUCK CASTO: It's a list of --

JIM WIGGINS: That was -- we've attempted, we tried to tell him everything you guys have been telling us.

You know, we understand the practicalities also. We've been in the business for a pretty long time too. We understand that but we've not been successful in moving him off that mark. This is what he wants. So we're going to do what staffs do. When he says he wants it, we're going to give it to him.

So what I intended to --

5

· Plus, you guys have a list of goods.

Right?

10

going to get the list of goods that Laura's got that we have in RST. We're going to use that. That's going to be one piece of paper. We're going to use the Bechtel drawing as the second piece of paper and then we're going to, we have, we have a textual discussion about manpower. We're going to end it up by saying we would be surprised if it would take less than several hundred people to pull this off because

CHUCK CASTO: I think we --

JIM WIGGINS: -- potentially.

CHUCK CASTO: I think we told MOD for days that we had the, that we had the design, that we had, you know, a, a pumping system.

JIM WIGGINS: Okay.

CHUCK CASTO: In the MOD meetings.

JIM WIGGINS: Okay. I, I understand.

I'm sorry to wake you guys up, but we've got about

NEAL R. GROSS

minus two minutes to finish this at this point. So, all right, I, I understand that there was no specific discussion with regard to manpower, materials, or tasking with the Japanese. Right? We talked them through the Bechtel design. They talked us through their design for the --

CHUCK CASTO: Correct.

2 þ

2 🛭

JIM WIGGINS: -- pumping systems.

But in terms of specifics of materials necessary or any kind of assessment of people that they would need to take it on, we had no specific discussions in that regard. Right? So any discussions that the Chairman would have with the ambassador would be the first of those, is that true, at that level of specificity? That's what I'm hearing.

JOHN MONNINGER: That's correct, in the discussions I was in.

JIM WIGGINS: All right. Well, Borchardt should be in here in a couple minutes to pick up this material. I, I don't know if you want to go back to bed or stick on the bridge and listen to the discussion we have. It's up to you guys. You might want to, you might, if you could stick around, he was, he needed to be here. He probably got hung up

in traffic.

Can you hold on for a bit?

JOHN MONNINGER: Yes. We can hold on.

JIM WIGGINS: Okay. You might hear us

ruminating over here.

(Extraneous content omitted.)

11

18

1

2

2

2 🛭

2

24

25

JIM WIGGINS: And in point of fact, there was really nothing in terms of specifics ever handed to any of the Japanese people that we've been talking to.

John had a meeting with, with the Tepco people and they had a mutual discussion of two designs. One was Tepco's and one was ours. So they just talked them through it without an exchange of paper. Okay.

BILL BORCHARDT: Yep.

trains.

BILL BORCHARDT: Right.

of specificity yet. Do you follow?

BILL BORCHARDT: Yep. I got it.

As close as we can, I can get in this, I can say that we would be surprised if it would take less than several hundred. It's like the low hundreds, a couple, 300 people maybe, a couple hundred because you're looking at four separate

First, you're just looking at this
particular pumping option. You've got four separate
trains that need to have people to install and
operate it in a high-rad field. So they're going to
need to install it in a tag team or they may have to

erect shielding or something like that first before they get to put this thing in place.

BILL BORCHARDT: Yep.

JIM WIGGINS: Then you're going to need HP support because people are working in those field. You've got to try to manage exposures, even if you're managing at the emergency level. And those people would have be in a tag team too because you'd burn them up also.

BILL BORCHARDT: Yeb. I got it.

BILL BORCHARDT: Well, I may recommend I'm going to recommend that we not hand it over, but

2

2

2

2 4

2

JIM WIGGINS: I tried that twice, and the boss didn't buy it.

BILL BORCHARDT: Yeah, but I, we have more data now, and maybe he'll buy it in a face-to-face conversation.

JIM WIGGINS: Okay.

BILL BORCHARDT: Has the person left who's going to deliver to me?

JIM WIGGINS: No. The person is still typing it.

BILL BORCHARDT: Oh, okay. All right, have him, have him print out two copies so that we can be looking at one --

JIM WIGGINS: Okay.

BILL BORCHARDT: -- if we end up having it, to hand it over. Okay, so I'll meet somebody on P1.

JIM WIGGINS: P1, all right.

BILL BORCHARDT: Thanks. Bye.

JIM WIGGINS: John, you heard that;
that's okay?

JOHN MONNINGER: Yeah, but I think it was partial information because I don't know what Tim told, you know, has told the Japanese, and I don't know what Jim Trapp has told the Japanese. I know they, they talked with MOD about it.

JIM WIGGINS: Yeah, I understand.

TIMOTHY KOLB: Jim, this is Tim Kolb calling. I'm on the line here. I have not told MOD anything. The only thing we've tried to set up is, is making sure we could get the equipment on the delivery spot and ready to go for training.

JIM WIGGINS: Make sure he told me he needed two copies. Three, yeah, one for the Chairman, one for Bill, and one for the Japanese.

TIM KOLB: ET bridge?

JIM WIGGINS: Yes.

TIM KOLB: Yes, this is cold calling.

JIM WIGGINS: Yes.

TIM KOLB: As part of telling the Ministry of Defense anything, when I left last, the last thing I told them, tried to do was set up to make sure they had personnel --

JIM WIGGINS: You cut out, Tim.

MALE PARTICIPANT: That's the phone.

RICK DeVERCELLY: He's not cutting out.

NEAL R. GROSS

TIM KOLB: We didn't talk about equipment types at all or any specificity of, of what we needed to move.

JIM WIGGINS: Okay.

CHUCK CASTO: Did you talk to them about the design, Tim?

TIM KOLB: No. We didn't, we didn't have any design picture with these meetings, and, and this meeting was only the ones I attended with John Monninger.

JIM WIGGINS: Okay. But I think, so it sounds like we all are in, the site team in Japan is all in agreement that we did not give specific stuff to the Japanese. That's fine.

TIM KOLB: Correct.

2:

2 5

Okay? So he needs to understand that so he figures out how he wants to play it.

All right. I guess there's not much for us to do at this point. You guys, you guys need anything other than for us to stop bothering you?

JOHN MONNINGER: The first thing you mentioned.

JIM WIGGINS: What was that?

JOHN MONNINGER: A hundred hours' sleep.

JIM WIGGINS: Yeah, okay. Well, we'll try to procure some sleep for you and send it out there.

Sorry about that. All right, guys, why don't you just go back and catch some rest as best you can. Sorry.

(CONFERENCE CALL INITIATED.)

3:36:10/3:37:09

BOBBI WARREN: Hi. This is Bobbi Warren in the Chairman's office. The Chairman is downtown with the Japanese ambassador. He never got the one-pager that he needs desperately. What, what's going on? I guess he needs to get an email directly to him right now.

BRUCE BOGER: Okay.

BOBBI WARREN: Is that right?

BRUCE BOGER: Do we, do we have an email

address?

15

1

1

1

15

2

21

2‡

2 5

2

2

JOHN MONNINGER: All right, Bruce, are you ready? Were you on the call that we had with Jim and Company about an hour and a half ago?

BRUCE BOGER: I was.

JOHN MONNINGER: We would like to provide what we think is the potential -- what do we want to call it? -- the potential story behind the questions. Are you ready?

So Bechtel worked the design with

Headquarters and NRC liked the design. We then moved

forward with the design through the embassy, through

DTRA and all the organizations down here.

You got it so far?

BRUCE BOGER: Yes.

JOHN MONNINGER: The embassy and DTRA and all -- the equipment was dispersed throughout

Australia. They said this stuff, purchasing department, the commerce department here at the

embassy, et cetera, said this stuff looks like it can be, it can be procured locally.

BILL COOK: Right. This is -- Bruce, this is Bill Cook -- and that transpired about five, 5:30 --

JOHN MONNINGER: Right.

1

1

12

1

1

1

16

1

18

1

20

21

2

23

24

25

BILL COOK: -- during a briefing with the ambassador here. And they were, all their heads got together and said, hey, we should be able to get this up in country.

JOHN MONNINGER: Yeah. So, so with that, the, the various agencies that work down here at the, at the embassy took that list and started making phone calls. We do not know exactly who they talked to, but they were trying to see if they could pull together a package within Japan such that this NRC system could be put together much quicker than the time lines we were getting from Australia.

JOHN MONNINGER: Right. It was the commerce attaché here in Tokyo that made probably a dozen phone calls to local suppliers. And in making those phone calls, they contacted one company that had put together a pumping system for the Tokyo Fire Department.

JOHN MONNINGER: So, did you follow that?

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

So when they called one of these companies, that company said, a-ha, we have also been working for Tepco and the Japanese and putting together a very similar system. It is then when we realized that Tepco had a potential plan. The potential plan that Tepco was pursuing was very, very similar to ours.

BILL COOK: We're not sure that it was Tepco though.

JOHN MONNINGER: Oh, okay. I'm sorry.

BILL COOK: It could have been at the request of, of the Tokyo -- excuse me -- the Japanese government.

JOHN MONNINGER: Yes.

1

11

11

1

1

15

1

11

1

1

2

2

2‡

2

24

25

BILL COOK: It's just, it's really clear as mud as far as who actually --

JOHN MONNINGER: Right.

BILL COOK: -- initiated that, that plan.

JOHN MONNINGER: Yeah. In the end, in the end, it was determined that we cannot rely on doing it locally. We have to go with the sure thing, which is Australia, and they gave the go-ahead for Australia. Okay?

BRUCE BOGER: Yep.

JOHN MONNINGER: So, so big-picture wise, it is correct that no NRC personnel in Japan

countries, Japan government, et cetera, for all this equipment that may, that was on our list. What that said, though, there's probably a good chance that the discussions with the Commerce Department at the embassy was taken to be that. And you know, the US government is the US government. It doesn't matter whether they have the title NRC or Commerce or something else. They're all the same. That's our, that our hypothesis.

BILL COOK: That's our story and we're sticking to it.

1

11

12

1 E

14

1Ė

1

11

18

19

20

2

2

23

24

25

BRUCE BOGER: Okay, so no direct NRC conveyance of the, the parts list and drawing, but it might have come through another aspect of the United States government.

JOHN MONNINGER: Yes. No direct NRC, but 100-percent direct from the embassy, Commerce, et cetera. So it, it doesn't help it. It's a technicality whether it was the NRC or the Commerce.

BILL COOK: Yeah, Bruce --

JOHN MONNINGER: For us, it's important, but for the US and Japan, it's immaterial.

BILL COOK: Yeah, the Commerce attaché had that list of equipment that was put together by Bechtel. It's a list of 14 items, and I'm, I'm

relatively confident that what they did is they faxed that to these local companies to see if they had these types of pumps or pipes or hoses or a, you know, comparable size, shape, form. And the speculation is that that word eventually got back to the, the Japanese government.

BRUCE BOGER: Okay. So I think it's important, you know, for the Chairman to know, or Bill Borchardt, that this is probably the root of these questions that somehow are occurring with the Japanese ambassador and between the US and all that kind of stuff.

1€

2 3

JOHN MONNINGER: Okay, now in terms of the manpower issue, I don't know where that, you know, that, that line of questioning came from. Our, our guidance to Bechtel was, this system has to be, you drive the thing in, you get out. Everything has to be put together in advance. It's pre-staged, et cetera.

So, if that results in, you know, the number that Jim was throwing around earlier to us, we don't know, but our system was meant to be very low-manpower to install. And then also what happened to help the (inaudible) take that, we get the lead from you guys last night on this helicopter from, the

helicopter in, in New England that can lift 5,000 pounds So, you know, we did mention this helicopter, et cetera, but we didn't talk anything about what it would take to install it.

And we mentioned such things like this helicopter when, today, we're going to meet with the Ministry of Defense and the president and CEO of Tepco. We're going to identify such things as, this helicopter is available for, from Lockheed, Lockheed Martin, I believe it is. And, you know, and, and, you know, if they decide to avail themselves of it, they do. What we tried to do to potentially grease skids is --

25

CHUCK CASTO: We did, we did give them that list, summary list to the Ministry of Defense yesterday.

JOHN MONNINGER: Yes -- Chuck's here too.

You know, and then we're telling them to
give them to the Commerce department within the
embassy, and went out locally, trying --

JOHN MONNINGER: -- trying to find it locally.

CHUCK CASTO: They were shopping.

CHUCK CASTO: They, they -- that's how we found out the Tokyo Fire Department had bought the

stuff.

JOHN MONNINGER: Right. So, while it's true -- it's true, we didn't ask the government or the infrastructure to provide it. It probably came across the Commerce Department and the Japanese.

It's all one thing, the NRC, the Commerce, embassy, et cetera. And we handed the summary of the list to the Minister of Defense with the ambassador yesterday in the Ministry of Defense building.

JOHN MONNINGER: But, you know, and those discussions there were we were bringing the assets in, proposing to bring (audio interference).

BRUCE BOGER: Yeah, I think there was an interest in just making sure that what the Chairman was providing the Japanese embassy was in concert with what you guys have been telling folks over there. So I don't think he was trying to figure out how it got to the other folks but to make sure that were at least consistent within the agency.

JOHN MONNINGER: Yeah, I guess it was a long day and I was in a little little bit of a defensive posture. I, I, I felt the line of questioning being we're trying to misdirect or redirect, you know, the infrastructure, resources, whatever.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

1(

1 E

BRUCE BOGER: The purest of intent, John.

JOHN MONNINGER: Yeah. Yeah. We wanted

make sure you guys got that information.

BRUCE BOGER: We'll communicate with the others to make sure they understand, at least have this information available to them.

JOHN MONNINGER: Yeah, and we weren't able to get -- it was actually a -- it wasn't good up front, the first 45 minutes with Tepco. But in, in the meetings ultimately we got to the discussing the design, and it was productive, and engineers talked to engineers and they were trying to assist each other and identify potential weaknesses and strengths in each other's design. Okay?

BRUCE BOGER: Yes.

2‡

JOHN MONNINGER: Yeah, the other thing we said, and we haven't debriefed either with Chuck, was for the Japanese design, it requires the concrete, massive concrete pumping trucks. They got the idea from building the sarcophagus at Chernobyl. But these concrete pumping trucks are used every place. It's got a 65-, 60- or 65-meter boom or something like that. They have two in country, two of them in the country, that they are proposing to use. We went, you know, pretty significantly back and forth

with the notion, you really should try to get four here because once you position it at Unit 1, the boom isn't long enough to get to Unit 2, so they've going to have to be moving this thing with dose, et cetera.

And we, went into a line of questioning, where else within the world is this equipment? And the only response they gave was, probably other place that they said, two brand-new ones are in China. It was owned by -- it was a private company. It wasn't Chinese government.

So we said, you know, we would see what we could do about that. Well, they had said, you know, could you assist with getting that kind of stuff here? So we said, you know, we would try to run down some stuff on that.

10

CHUCK CASTO: It's kind of related, but is somebody on your team on the phone call with the Reactor Safety Team?

BRUCE BOGER: Yeah. It's two people next-door. We got a second phone now.

CHUCK CASTO: Yeah, because they were, I thought one of the areas of discussion on that phone call with related to logistical support, and there's a, has been an offer of assistance from the Navy to use some of their assets to move things around.

That, they're talking about that.

10

1

1

18

14

1

16

11

18

15

20

2

 $2^{\frac{1}{2}}$

23

24

25

So, related back to your last though about things in China, we'll have to see how that pans out.

JOHN MONNINGER: Yeah, DART can move that stuff too. You know, I think the thing is here, we have connections with these people who do all the transportation, infrastructure, so we've got to run it through them.

BRUCE BOGER: No, no. I'm just trying to share what I know is going on, what I think's going on in the other room.

JOHN MONNINGER: Well, you probably, you know, you'll usually find that the Embassy prefers DART.

MALE PARTICIPANT: Is that Joe?

JOHN MONNINGER: Yeah, Joe.

So we pull in Joe in all these discussions.

CHUCK CASTO: You know, that's what they pay those guys for and that's what, why they're here at the Embassy. And they do it all the time and they do really big stuff in big quantities all the time.

MALE PARTICIPANT: Yeah.

CHUCK CASTO: So they feel, they often

feel like you're, you know, saying they can get the job done if you go outside.

I'm just giving you background. We can do whatever we want to do, but I'm just giving you background. Sometimes you're stepping on toes if you don't let DART have a shot at it first.

BRUCE BOGER: Yeah. Okay. Point well taken.

CHUCK CASTO: Everybody, everybody wants to help. You know, we've got hundreds of offers of help from different agencies and organizations and stuff, but, you know, we've got to take care of the embassy here, too, because that's who, that's who pays our check.

BRUCE BOGER: Okay, yeah. We'll make sure we convey that along, see if anybody wants to help.

MALE PARTICIPANT: I had a question from the, the earlier phone call, and I the impression -- this is -- I think I heard John say or indicate that the in-country or the Tepco design or system might be ready sooner than the one that's coming from Australia now.

JOHN MONNINGER: That is, that -- you know, it's either earlier or later. We believe

conceptually it's earlier because it's in country and all that kind of stuff and Tepco has been working it. BRUCE BOGER: Is that the one that uses the, the concrete sluice? JOHN MONNINGER: Yes, that's the one that uses the concrete (inaudible). BRUCE BOGER: Okay. JOHN MONNINGER: Instead of concrete, they're going to pump water. BRUCE BOGER: Yep. Okay. JOHN MONNINGER: Yep. BRUCE BOGER: What, what is on your plate today priority wise, and what can we do to support it? CHUCK CASTO: Well, our priority continues to be the pumping, but --BRUCE BOGER: Okay. CHUCK CASTO: -- this morning we have the ministers of somebody, the Minister of Trade, and CNQ of Tepco and the CEO of Tepco. That's first thing this morning. JOHN MONNINGER: Also, meeting with the Ministry of Defense this morning, the minister, and also a meeting with the general of --

CHUCK CASTO: The Big guy.

JOHN MONNINGER: -- of Japan Forces, not US general, Japan Forces, but Japan general. CHUCK CASTO: It's a Joint Chiefs of Staff guy. JOHN MONNINGER: Yeah, for Japan. CHUCK CASTO: For Japan. We've met with him before. He's a good guy. DONNA: John? JOHN MONNINGER: Yo. DONNA: This is Donna. We did hear that the Japanese ministry was going to get us some dose rates. I don't know if that's coming from you or through another channel. I just wanted you to be aware of that if you can, have an opportunity to ask them. JOHN MONNINGER: Okay. Dose rates? DONNA: Correct, and that we were going to look at the usefulness and see if that's necessary to share with some of the other countries. JOHN MONNINGER: So where do you think that request went to? DONNA: The Japanese Ministry. Those are the folks you're meeting with today. JOHN MONNINGER: Well, there's like a

gazillion ministries. They're just like DOE and

Department of State in the NRC and FCC.

Right? Is that how they're set up?

MALE PARTICIPANT: Yes. Just like a cabinet.

JOHN MONNINGER: Yeah, so it's their cabinet level.

CHUCK CASTO: Any, any department in the department in the government is a ministry.

 $\label{eq:john monninger: But we'll ask our team} \ .$ here.

DONNA: Maybe you can ask whoever you're talking with about the, is that information available.

CHUCK CASTO: Yeah, it may well be the science ministry.

JOHN MONNINGER: Yeah, well, we chatted about that before, and from Tepco, we -- I think it was from Tepco, but things are going pretty quick -- but there's, you know, there's your typical SOR, you know, plan schematic, plant layout, whatever. They had dose rates, but they're in such gross areas, probably, you know, 40 meter by 40 meter, if it says 10 R/hour, that's not going to help you at all.

If you want to plan where you're running this equipment, you need much, much, much finer

granularity, and they can't go in and suck up the dose now for that. That's why they want the robots with these rad sensors to be able to map the site.

BRUCE BOGER: And that's working also, I suppose --

MALE PARTICIPANT: Yeah.

BRUCE BOGER: We're, we're done with excitement for the morning out here.

CHUCK CASTO: I tell you, one thing that would be helpful -- this is Casto -- before we meet with the CEO and the CNO and the minister, we probably should have some -- what do you guys think is the message to them?

BRUCE BOGER: I think they asked for this so that -- they really wanted to do it last night before the Chairman met with the ambassador so they can say we were playing nice. But they couldn't pull it off at 10:30 last night.

CHUCK CASTO: Well, the Chairman was supposed to meet with (audio interference) go to the Japanese Embassy a couple of hours, an hour and a half ago, an hour and 20 minutes ago --

FEMALE PARTICIPANT: Four o'clock our time.

BRUCE BOGER: -- four o'clock our time.

We'll see if we can get some -- and Bill Borchardt's with him. We'll see if we can't get some information on some messages that he was sending so we can let you know what those were.

JOHN MONNINGER: Yeah, that would be helpful if we could get from the Chairman and Borchardt, you know, maybe an outcome on what they think we need to tell Tepco local here.

CHUCK CASTO: Okay.

(Extraneous content omitted.)

JOHN MONNINGER: All right. We're going to hang up from you guys.

BRUCE BOGER: Okay. Thanks a lot. We'll be here.

CHAIRMAN JACZKO: -- was a little worried at some of the iodine deposition in Alaska. I, I just talked to DOE again, and I think we have a fairly good answer on that, namely that there is no grass that grows in the Aleutian Islands.

TRISH HOLAHAN: Yes. This is Trish Holahan. I was just briefing --

CHAIRMAN JACZKO: Oh, hey, Trish.

TRISH HOLAHAN: -- yeah -- I was just

briefing the ET on what's happened.

We had a call with DOE and NARAC about two hours ago and we clarified some

questions. They raised the question, as we had, that the iodine dose of Alaska was pretty high because the cows that, weren't, weren't on grass. So they weren't eating grass. They were, you know, housed internally. And even the water supply is internal because they're not outside.

CHAIRMAN JACZKO: Yeah. Yeah.

TRISH HOLAHAN: So we eliminated that dose. So it's basically down to the ground shine dose, which in Alaska is 80 millirem.

CHAIRMAN JACZKO: Okay. Okay. Good. That's good to know. Thank you.

TRISH HOLAHAN: /

CHAIRMAN JACZKO: Okay. Good.

TRISH HOLAHAN: But they're being housed internally.

CHAIRMAN JACZKO: Okay. Good. So we're pretty comfortable, then, with the statements that I've made. Then again, I keep asking these questions and I don't mean them to be leading questions.

I need you to tell me if -- if you ever think they're wrong, you know, I've said something wrong, please tell me. I don't want you not to tell

me. I don't, I don't want you not to tell me. So

I'm not trying to ask these leading questions, but it

sounds like we're still comfortable with what I said.

TRISH HOLAHAN: Yes.

CHAIRMAN JACZKO: Okay. Good. Thanks. I appreciate it very much.

DONNA ORDAZ: And Chairman, we're still expecting those other results we mentioned on the worst case, if you will, --

TRISH HOLAHAN: Yes --

information?

DONNA ORDAZ: -- that we mentioned to you earlier.

CHAIRMAN JACZKO: Yes.

DONNA ORDAZ: That information hasn't arrived yet. Well, I mean, we haven't sent -TRISH HOLAHAN: Do we have the source

DONNA ORDAZ: I have the source information. But I was going to (inaudible).

CHAIRMAN JACZKO: Okay. And for that, are we going to fix this iodine problem at the get-go?

DONNA ORDAZ: We are, were going to ask NARAC to look at the availability of cows feeding outside.

CHAIRMAN JACZKO: Okay. Good. All right, well, thanks, everybody. I appreciate that.

And if you, Trish, if you get this this evening, if you can maybe give me a call if it's not before nine and just walk me through that.

TRISH HOLAHAN: Okay.

CHAIRMAN JACZKO: Are you on the new shift or were you on the old shift?

TRISH HOLAHAN: I'm on the new shift.

CHAIRMAN JACZKO: Yeah, if you could give me a ring when you get that, if you get them tonight, if not, give me a call me tomorrow and walk me through them.

TRISH HOLAHAN: Yeah, we wanted to walk through the source term. I thought you wanted to see the source term and the assumptions that we were putting in before we sent it to NARAC.

CHAIRMAN JACZKO: Okay, good. Do you want to walk me through that now?

TRISH HOLAHAN: Yes.

CHAIRMAN JACZKO: Okay.

TRISH HOLAHAN: They're performing dose modeling for units of concern at the Fukushima Daiichi site, three reactors and for spent fuel pools.

CHAIRMAN JACZKO: Okay.

TRISH HOLAHAN: The dose analysis would include, assume 100-percent core melt with containment failure for the three reactors -- CHAIRMAN JACZKO: Okay.

TRISH HOLAHAN: -- And additionally assumes that the four spent fuel pools are emptied of water and all the spent fuel is melted, which released the fission products in the environment.

CHAIRMAN JACZKO: Okay.

TRISH HOLAHAN: So we're going to send the isotopes, assuming 100-percent core release and three, four spent fuel pools and three reactors.

CHAIRMAN JACZKO: Okay. And this would be truly be a truly, truly worst case, that basically it's just not humanly possible?

TRISH HOLAHAN: Yes.

CHAIRMAN JACZKO: Okay. Is -- okay, so we're just going to do this so we truly, truly know, the kind of crazy thing that -- the meteor hitting the earth at the same time as an asteroid strikes.

TRISH HOLAHAN: Yes.

CHAIRMAN JACZKO: Okay. Okay. So, yeah, that's -- and that's what they want. They don't want more realistic source terms for the reactors?

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

TRISH HOLAHAN: That's what we were told by the ET this morning to assume.

CHAIRMAN JACZKO: Okay. Okay. Good.

That's fine.

TRISH HOLAHAN:

(Simultaneous conversation.)

CHAIRMAN JACZKO: Okay. Yeah, well, why don't you say okay to that? I'll call, I'll call D'Agostino.

My only -- you know, I just only worry in a way that, why are we producing something like that that just -- I mean, isn't it pretty, aren't we really doing worst-case if we do something like the reactor core we did for the last run?

TRISH HOLAHAN: Yeah. The last run was what we initially thought was the worst case, and then we said, well, really, we had to assume the worst case, all reactors that were exploded --

CHAIRMAN JACZKO: Yeah.

TRISH HOLAHAN: -- everything melted. You know, (inaudible).

CHAIRMAN JACZKO: Okay.

TRISH HOLAHAN: So we don't think that's the correct assumptions.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

1

1

11

23

CHAIRMAN JACZKO: I mean, I guess -- you know, it's an interesting thing, this idea of worst-case. You know, and maybe this is the whole problem is I like to think of worst-case as, there's what's worst case and then there's what's possible.

So I think what we should produce a worst-case that actually possible. You know, I mean, a worst-case would be something that, a worst case would be that you reject the core and, you know, it gets, and somebody puts it in a bag and carries it over across the, the ocean and put that in the, in the, in California. That would probably be the worst case.

(Laughter.)

CHAIRMAN JACZKO: So, I mean, but obviously, there's a physical reality at some point that certain things just cannot happen.

TRISH HOLAHAN: Okay.

CHAIRMAN JACZKO: So I think we really should produce a source term that is truly what I would call a worst-case but a possible scenario.

TRISH HOLAHAN: Okay.

CHAIRMAN JACZKO: I don't know if that's feasible. IF folks can think of what, you know, if there's any physical limitations. I mean, obviously,

if you melt the core, you're not going to volatilize everything in the core, can you?

BRUCE ROPER: I don't know the answer to that. We can always talk can only talk about plate-out and things like that, so it all doesn't get out.

CHAIRMAN JACZKO: Yeah.

BRUCE BOGER: It sticks to the sides of the walls.

CHAIRMAN JACZKO: Yeah. And it's not all -- I mean, some of it is solid still.

TRISH HOLAHAN: Um-hmm.

1

2 🛭

2 B

24

2 🖁

CHAIRMAN JACZKO: And I guess it's the iodine and the cesiums that you worry about. It's not the uraniums and the, you know, the hotter, the heavier elements; right?

TRISH HOLAHAN: Yes. And we've also been asked to look at the MOX capability, you know, the MOX fuel in Reactor 3.

CHAIRMAN JACZKO: Yeah, in the pool?

TRISH HOLAHAN: Yeah. We, we thought that that was wasn't significantly contributing to the dose.

CHAIRMAN JACZKO: Ah, okay. Okay. Interesting. Okay. Well, yeah, okay.

Well, then maybe that's the driver.

Maybe it doesn't matter then what we do with the other things because it won't really act appreciably much anyway.

Just go back one more time and, and look and see if you can't come up with a, with what I would call a true worst-case scenario; namely, the worst-case that is physically possible.

TRISH HOLAHAN: Okay.

1

1 E

1

17

18

11

2

2

2‡

2B

24

2

CHAIRMAN JACZKO: See if you can do that because I, I have to believe that there is no possibility in a light-water reactor design to reject an entire core. I mean, that's basically steam explosion; isn't it?

TRISH HOLAHAN: Yes.

CHAIRMAN JACZKO: And, and I think we've ruled that, as an agency, we've ruled that out as a physical possibility.

TRISH HOLAHAN: Okay. I can --

CHAIRMAN JACZKO: See if you can just take another run at that and give me a ring back and see what that looks like.

TRISH HOLAHAN: Okay, I'll talk to the Reactor Safety Team.

CHAIRMAN JACZKO: Okay. All right.

Great. Bye.

25

Jack? Jack?

Standby.

(Audio interference.)

CHUCK CASTO: We're -- this is Chuck.

I'm sorry. I apologize. There's a lot going on here and it's a little noisy.

So, there's some, we've got the latest air monitoring results, so if you go to that, I think it's the EM web, you can see those. You're going to see a little bit more contamination to the west, and I think they're going to fly more west today.

That's, and I don't know if you all have that assessment or not.

The, probably the more important thing is they, apparently -- I just saw these moments ago -- they apparently shared with us some photos that they had taken from the parking lot of Unit 3. And I'm in the process of having somebody scan those and try to

get those to you. But I, it's, I think it may be a game changer with Unit 3.

I don't us, but it, the angle that they were able to take from the, from the, I guess that would be the west side -- everything that we've taken is more or less from the east side of the building or on top of it.

But take a look at those photos on Unit 3 when you get them, and we need to talk about what those photographs are showing us because it may be highly important to look at those photos. So they're on their way. We're taking them down to their,

Jefferson Room down at their EOC kind of place, and see if we can't get them to beam those to you somehow.

15

1

17

18

11

20

21

22

23

24

25

CHUCK CASTO: But let's not -- let's look at them first and make sure that we know what we're talking about before we react to it.

But we'll get them to you, and when you look at them, we need to take a hard look at them.

That, it looks like there's severe damage on the side of that building. And all you can basically see are the vertical pillars to there. So I don't know.

Let's take a look at it. Let's take a hard look at them. You need to draw your attention to, and help us understand what it is that we, that we're looking at --

FEMALE PARTICIPANT: Okay.

CHUCK CASTO: -- before we react to them.

CHAIRMAN JACZKO: Chuck, can I, can I

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

fill you in on a little bit of information that I have. And I, I know you just got up, and I wanted to just do a quick dump with you and let you finish here with the brief if that's okay.

CHUCK CASTO: Yes, sir.

CHAIRMAN JACZKO: One -- Jim Wicking (phon) has some information that --

I don't know if you can get it to him in the Embassy.

JIM WICKING: He could go to the defense attache's office.

10

1:

1

CHUCK CASTO: I understand.

CHAIRMAN JACZKO: Okay. Thanks.

CHUCK CASTO: So I think the thing to do

is, is --

Rick, what's the status on that right there?

RICK DeVERCELLY: I've got the package together. I'm sending them two other documents to help them reference what they're looking at.

CHUCK CASTO: So we're going to send you the photos they gave us from the parking lot and also some design diagrams that might help, help you interpret what you're looking at.

FEMALE PARTICIPANT: Okay. Great. Chuck? CHUCK CASTO: Is there anything else we can provide you all with? Go ahead. Head down there. Hold on. Stand by. I think if you just email it to the HOO address, right? MALE PARTICIPANT: RST01.HOC. FEMALE PARTICIPANT: RST01.HOC. 10 MALE PARTICIPANT: Got it. 11 TRISH HOLAHAN: Okay. 11 Chuck? 18 CHUCK CASTO: Yes. 14 TRISH HOLAHAN: Trish Holahan. I'm the , 15 director of PMT tonight. 16 CHUCK CASTO: Yeah. 1 t 18 TRISH HOLAHAN: Do you have any real-time dosimetry data from the site? 12 20 CHUCK CASTO: Dosimetry as an monitored 2 from people? TRISH HOLAHAN: Well, we need dose rates 22 and doses. We don't, we heard things. Last time we 23 24 had an update was two days ago. CHUCK CASTO: You ought to talk DOE, and, 25

NEAL R. GROSS

you know, as I said, on that EM Web or whatever that thing's called --MALE PARTICIPANT: CM Web. CHUCK CASTO: -- CM Web is all the, all the results. MALE PARTICIPANT: Exactly. Lou Brandon has -- (off mic.) CHUCK CASTO: Lou Brandon. TRISH HOLAHAN: Okay. He, he's got the most recent information? 1011 MALE PARTICIPANT: He has access to CM 12 Web, and that's where the most recent information for 1 B the DOE aerial monitoring is. 14 TRISH HOLAHAN: Okay, we saw the results 15 of ANS monitoring, but it wasn't really very useful 16 to us. MALE PARTICIPANT: You're talking about 17 18 on the ground; right? TRISH HOLAHAN: Yeah. I want --19 20 MALE PARTICIPANT: You're talking about 21 on site? 2 2 CHUCK CASTO: You're talking about radiation levels. I'm not sure that anybody's done 23

24

2 🛱

TRISH HOLAHAN: Okay.

BRUCE BOGER: Yeah, Chuck, this is Bruce.

I, I'm presuming it's too hot for people just to

even go do surveys around the site.

CHUCK CASTO: Oh, yeah, it's like 1 $\mbox{R}^{\mbox{`}}$ at the gate, or more.

TRISH HOLAHAN: Okay.

2 3

CHUCK CASTO: So you can't -- I don't -you can do an extrapolation. I think those
scientists can extrapolate from, you know, the gate
the distance and, you know, but you've got debris,
the shielding, you know, all kinds of uncertainties.

So, you know, I think, basically, you know -- I don't know. I'll try to find out from Tepco. I'll, I'll pose that -- if you want, if it that's that important to us -- and I know it's important to them -- I'm meeting with the CEO and the CNO of Tepco and a minister of trade, and I'll put that on the list of information we need from them as the dose, dose information that they're seeing on the ground.

BRUCE BOGER: (Inaudible).

TRISH HOLAHAN: Also, the Chairman has asked us if the 50-mile exclusion is appropriate and we need to know the doses.

CHUCK CASTO: Yeah, and I'll, we're meeting with NISA today and Tepco at nine o'clock, all these people. And we'll tell them it would be helpful for us in projections if they can share the on-site doses that they're seeing on the fire trucks.

TRISH HOLAHAN: Okay.

CHUCK CASTO: I, I know they're seeing, I know they're measuring some because I heard, I heard that that one fire truck in, I think it's in two minutes, they picked up 10 R.

TRISH HOLAHAN: Okay. Yeah, that's, that's the type of information we really need.

10

11

12

1

14

15

16

17

18

1\$

20

2

2

23

24

25

CHUCK CASTO: The fire truck, in a two-minute spray, was 10 R --

TRISH HOLAHAN: Okay.

CHUCK CASTO: -- up against the building, close enough, whatever that distance is for a fire truck to spray.

TRISH HOLAHAN: Got you.

CHUCK CASTO: So we'll put that as a priority and try to get dose data.

I, I'll tell you who's working on this.

Somebody's working on this with DOE. I remember now.

Let me think on it, who it is on our team. The, the ambassador's asked us for -- who's working on

Jack -- Jack's working on

with

DOE today.

I think, this morning?

MALE PARTICIPANT: Yes.

CHUCK CASTO: Jack's working with DOE.

The ambassador's asked us for

on, on, you

know -- they're worried because the

So, you

know, they've asked us to come up with scenarios. So Jack's working with DOE and --

And who?

MALE PARTICIPANT: PMT.

CHUCK CASTO: -- and PMT today, this morning, to, with -- because I, certainly by, if I -- I'm probably getting fired by a lot of people, but the ambassador will fire me if I don't have that stuff at, at six o'clock tonight when I go to the staff meeting. So sometime today, we have to have, and Trish, it would be great if you, you all would help us, establish the

TRISH HOLAHAN: Okay.

F

COURT REPORTERS AND TRANSCRIBERS

you know, they -- there's a lot of questions about seawater, the seawater fill on some of these units, you know, whether it's really working and is it, is it going to be sustained. And, I mean, you know, there's a lot of questions on that.

And we're, you know, we're not really focused on that at this moment, but, you know, because it's stable at this point as far as we can tell. And there may be -- we've seen times when there was some fluctuation in that data and information, but we haven't responded to it. Plus nothing serious has happened yet.

But, and if you respond to every -- you know, the problem is, you learn if you respond to every little piece of information that comes up, you, you end up whipping the whole organization around, so sometimes you got to let this information just settle a bit, and it becomes clearer.

TRISH HOLAHAN: Okay.

CHUCK CASTO: And the problem is taking, making the right choices of which information.

Like I said, I'm just about the pas you guys some information and I, I don't want to overreact to it, so we need to sit together and talk about what this building, what these photos look like

of this building.

25

TRISH HOLAHAN: Okay. Chuck, for your meeting that you have coming up, there was an email sent to you maybe 20 or 30 minutes ago or so ago. It has some talking points that might be helpful for your upcoming meeting.

CHUCK CASTO: Yeah, I have, we have a staff meeting at, at, it's at 9:30 with the ambassador, and then I have one at six. You know, we have the morning staff meeting.

Who -- the, the talking points you're talking about came -- what title was the email or who was it from?

TRISH HOLAHAN: It says "Japan Nuclear Situation," 3/18, today's date here, 3/18 at 3:15 p.m.

DONNA ORDAZ: It's what the Chairman took with him when he went down to see the ambassador.

CHUCK CASTO: I saw that. It had like four attachments.

DONNA ORDAZ: Yeah, we just wanted to sure you had the same information that you knew the ambassador here in Japan has seen.

CHUCK CASTO: Yeah, because I want to -that was part of -- I think Bruce and I talked about

that. The, you should have the email. It looks like Rick had success on -- no. I don't know what that is.

But, spent fuel geometries issues. Let's see. I don't know if that's the pictures or not.

But anyhow, we want to get our talking points together here before we go over to the CEO in CNO and the minister of trade or whatever he is, ministry of something, and, you know, what messages we need to deliver to them.

FEMALE PARTICIPANT: Okay.

CHUCK CASTO: And I'll use that, those four attachments as some of the talking points.

Good?

BRUCE BOGER: Chuck?

CHUCK CASTO: We're having fun now, are

we?

1

19

20

21

22

28

24

25

BRUCE BOGER: Yeah. Hey, a couple of round thoughts. Just back, circling back a little on the dose information, I think if we have a little more information relative to the on-site doses, it helps some people interpret what's going on better.

You know, we're, we're kind of unable to interpret the, the flyover stuff, you know, the ultra worst-case thing that might happen in Alaska and

California. But for some of us, just knowing that it's an R at the site gate, it's, you know, some of these, the, the other information about how much dose the firemen are picking up, things like that, little tidbits like that, they'd be helpful.

TRISH HOLAHAN: Just to give us some perspective. Right?

BRUCE BOGER: Do that's, that --

CHUCK CASTO: Yeah, we can get that.

Yeah, we understand your need and we'll support you need as best we can. Jack Foster's got it. He's, he's the one that has the, he's got the lead on that.

BRUCE BOGER: Great. Thanks. All right,

Bill has something --

NEAL R. GROSS

CHUCK CASTO: Yeah, right. I mean, it

1 d

1

2

doesn't, I mean, it doesn't fill anything. First of all, we don't even know if you can fill anything because we don't know if there's anything there to I mean, you know, and especially when you look at these new pictures, it's not even sure that the spent fuel pool's even there on Unit 3, these pictures from the parking lot. Somebody's going to have to help me interpret those. But that sure looks like pretty severe damage of that building to me, from the parking lot angle.

But, you know, so we don't know if there's anything to fill. We don't know, you know, if -- but the best we're trying is we think there might be some structural integrity on Unit 4. However, they and we both think there's at least, there's probably at least a leak if not a rupture on that pool.

So, you know, we're talking about is the, the mining mud to try to, you know, put the mining mud in there to stop -- if it's a leak. If it's just a small leak, can we mud it and seal it up and then pour the water in there? And we need to know how much -- this isn't a task, but there's, some considerations are how much mud you can put in there? And you already have a compromise, a compromised structural integrity, and you start putting heavy mud in there, how much can you put in there without collapsing the pool?

1(

MALE PARTICIPANT: Yeah.

CHUCK CASTO: So, you know, it's an unbelievable dilemma. You know, and then, if it's a rupture, if the side of the pool is ruptured or the whole bottom of it's got a massive rupture in it, then, you know, what do you do then?

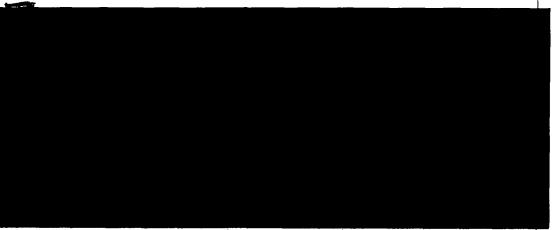

So, you know, we're trying to water

NEAL R. GROSS

things. We think that a high-volume water supply is at least a good attempt to put water in a pool or keep something cool. We also got the coning nozzles on the way so we cannot just pump water in but we can spray.

worried about zirconium fires and making the matter worse. You know, and then if you start a zirconium fire, do you know how to put it out? And do you have the equipment to put it out? If you make matters worse -- I mean, it's all the stuff we talked to Tepco about at midnight last night, from midnight to 4:00 a.m. You know, you guys, before you try this stuff, you need to make sure you know what the measure of success is.

They're just throwing solutions other problem and, you know, there's no measure of success.

So, you know, it's, it's -- and we're working -- you know, the political dynamic and the

dynamic, the organizational dynamic, is just, you know, unfathomable.

So, but the good news is we finally, at midnight last night, got Tepco, the guy in charge of the pumping operation and the fire truck operation in the room, and we went through it until four in the morning discussing the design of the system.

MALE PARTICIPANT: This, this is their system or our system?

10

11

 $1^{\frac{1}{2}}$

11

1 (

17

18

1

20

21

22

2 🕽

24

25

CHUCK CASTO: We don't care. You know, it's, let's get together and design a system. They had an idea. They had a concept; We had a concept.

You know, we took, we take part of their concept, and they take part of our concept.

MALE PARTICIPANT: Yes.

CHUCK CASTO: Let's just make sure it's a system that works. It doesn't matter whose system it is.

MALE PARTICIPANT: Yes, sir.

CHUCK CASTO: And it's a matter also of timing. Which, which system, you know, which configuration can you get in place first?

The pumping, the pumping -- I mean, here's the dilemma. The pumping system they want to use, they have cement trucks that they want to use,

massive, there's only two of them in country. They need four. The other two are in China. So, you know, we've got to get the Chinese government to let us have them and, and fly them in here.

MALE PARTICIPANT: But they're here.

They're remote control operated.

CHUCK CASTO: Yeah, they can remote-control operator the things. They were used at Chernobyl. You know, so we've got to fly them in from China.

Our system -- the Bechtel system; it's been called the Bechtel system but it's really our system that we designed here in this room -- and Bechtel said, okay, we've got this, we got the configuration. We'll build it for you. It's sitting in Australia, I think, in two pieces, one on each end of the country.

In addition, the third success path is we broadcast out to Japanese companies yesterday afternoon and said, here's a list of stuff that we need. You got any other stuff? And we got a call from a supplier who said, hey, I just sold this stuff to the Tokyo Fire Department. And we said, do what? And they said, yeah, we sold this to the Tokyo Fire Department. So we called the Tokyo fire Department

and said, what are you guys going to do with this stuff? And they said we're going to use it to build a system to put in, to pump water to the reactor.

MALE PARTICIPANT: It was on CNN this morning.

CHUCK CASTO: Yeah, I think guess it was on CNN this morning.

So, you know, there's multiple, I mean, it's just coming from all over the place. And you're trying to put this together, and you're working with a government that's, whatever. So, you know, and we want to measure the success. We want to make sure -- we don't want to make, we don't want to make things worse.

MALE PARTICIPANT: Yes, sir.

CHUCK CASTO: You know, if you've got a stable environment right now, who knows how long it'll stay stable? But, but if you start these processes and you cause -- you know you're probably going to cause a plume, and that's going to be a problem, you know, when you start steaming this thing again -- and if you steam it at a high rate, you're likely to cause a plume, and that's going to, you know, that's going to panic everybody. And, you know, ANS is going to go off the scale and all that

stuff. So you've got to be able to tell people ahead of time.

This is what we told Tepco last night.

We said, look, if you're going to create a big plume and radiation is going to start spreading, you need to tell people ahead of time that we know this is going to happen, not do something, create a plume, and then tell everybody, oh, yeah, that plume, we did that. So, you know, you've got -- it's, it's just an incredible difficulty mapping all this stuff together.

BILL RULAND: And, and, and even the people that are going to be in there initiating these systems, you know, I mean, talk about heroic efforts.

CHUCK CASTO: I can't even go through it.

Bill, you're absolutely right. I mean, you're

sitting in a room and, you know, we were, we sat in a room yesterday with,

BILL RULAND: That's exactly right.

CHUCK CASTO: And, and we all acknowledge that and, and understand it. But as they said, you know, some people are going to have to take some

risks to save Japan and the world from something that, you know, is undesirable. So the, the enormity of that meeting in that room was, you know, it was incredible.

But we have to -- and the other part is

-- here's what's really frustrating. I'm just

venting this morning. Okay, I'm sorry. I apologize,

but --

CHAIRMAN JACZKO: Hey, Chuck, can I interrupt you for just a second?

CHUCK CASTO: Yeah.

CHAIRMAN JACZKO: Do you need me to call the ambassador and relay a message to him directly?

CHUCK CASTO: What would the -- I'm sorry. What was the message?

1 B

5

MALE PARTICIPANT: Yeah, the Chairman just stepped out.

CHUCK CASTO: Oh, good. Don't tell him I said that.

(Laughter.)

there's a couple of other questions that came up, and, and one of them, the Naval Reactors guy is is here and he's really interested in being able to help us with logistics. And I don't know what, how the things are set up in the Embassy to, to facilitate the, you know, the arrival of equipment and the transport and hooking things up and all that. We're presuming that you guys aren't doing that.

CHUCK CASTO: Oh, no. We're, we're -that's -- the logistic issues. Let me go over this.

BILL RULAND: (Off mic) piece of it -I'm sorry. Go ahead, Chuck.

CHUCK CASTO: Here in the Embassy, DART is responsible for logistics. DART moves big, big stuff all over the world, USAID DART. They move crap everywhere, heavy lift, everything. You tell these people what you need, and it'll be moved. Okay?

We've got logistics like logistics. And that's, you know, sort of the embassy's endorsed process, AID, USAID, and that organization here in the embassy. BRUCE BOGER: Now, is it possible for me

to point the Naval Reactors guy to somebody in that organization that, so they can make sure that they're plugged in?

CHUCK CASTO: They could talk to

in the embassy.

BRUCE BOGER: All right, through

CHUCK CASTO: If they hook up with they can decide who lifts what out of where. You know, probably somebody, it may be somebody has to go into China and get those trucks.

BRUCE BOGER: Okay. That's fine. just looking for a point of contact.

CHUCK CASTO: If, if they talk to if they talk to here in the Embassy, you know, when you talk to AID, it's best to talk to the local AID, you know, because they're on the ground here and they have a team here. And it's best to talk to them, the local AID.

is the point of contact.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIRERS

BRUCE BOGER: Do you think there's a Naval rep somewhere running around the Embassy? CHUCK CASTO: There is a POL-MIL rep. Let me get his name. Where's my list of reps at here? BILL RULAND: And we have, the contact that we have is a Commander Po, P-o, US Naval Forces Japan. We've got a DSN number for him. We have --CHUCK CASTO: Where's the, where's that 1 list of --BILL RULAND: A guy named Jin Lin (phon) 1 1 who's a major. 1 CHUCK CASTO: I've heard of that name, Jin Lin. I've heard of that name. 14 Here we go. Here's the POL-MIL 1 coordinator. You just call this number and they'll 16 11 get you whatever you need. It's That's the JECC, the Japanese Emergency Command 18 Center, the JECC, and that's the POL-MIL coordinator, 1 20 2 BILL RULAND: Okay. 2 FEMALE PARTICIPANT: (Off mic). 2 CHUCK CASTO: I beg your pardon. , 24 BILL RULAND: That's not to 25 That's to --

> NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

b

CHUCK CASTO: No. No, that's the POL-MIL coordinator.

BILL RULAND: Okay.

MALE PARTICIPANT:

CHUCK CASTO:

25

is USAID.

BRUCE BOGER: All right. Thanks, Chuck.

Next question is related to, apparently called somebody and he's interested in having INPO play a roll.

CHUCK CASTO: Yeah, we worked on that earlier in the week. I give up when I heard that lawyers were involved.

BRUCE BOGER: Do you have a, a specific technical type expertise that INPO may provide and then let somebody else slug it out on the, you know, the legality and all that?

CHUCK CASTO: Yeah, that role changes delete, but there's a couple of, there's a couple roles we can give to INPO. One is BDA, if anybody has BDA experience.

MALE PARTICIPANT: Translation please.

CHUCK CASTO: Bomb data assessment.

MALE PARTICIPANT: Okay.

CHUCK CASTO:

BRUCE BOGER: Okay.

and then I wanted, I thought it would be good if INPO was, we just had a window to the US industry through that person. Okay? You know what I mean? At first we talked about severe accident management, having somebody with the severe accident management.

But I can tell you on all these jobs,
Bruce, as you know, the, the, the technical end of it
is probably 20, 25 percent.

BRUCE BOGER: Yeah.

CHUCK CASTO: You know, you, the, the diplomatic, the political sensitivity, the strategic thinking is, you know, 80 percent of the job. So, you know, because somebody, you guys come up with ideas. We come up with ideas in this room. And then somebody's got to go out and be the liaison with Tepco, with METI, with MOD, with USAID, all that, to make it happen.

You know, technical ideas are, are -we're basically working with a rubble bed here that,
you know, we're trying to cool or do something with.
So, like BWR experience isn't useful because it's no
longer a BWR.

BRUCE BOGER: Right.

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

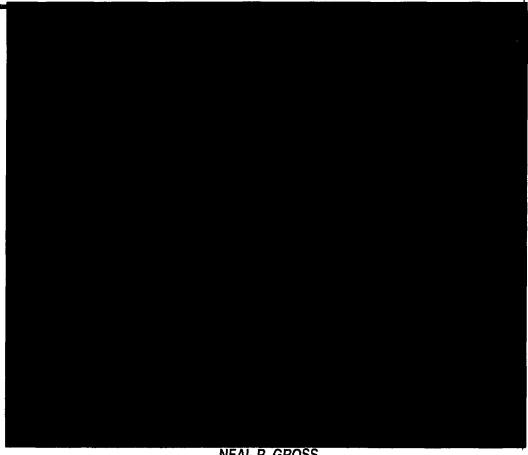

CHUCK CASTO: So, anyhow, that, I think those three roles, a generalist with a good political skills and good, you know, give us a window to the US industry and their thoughts and ideas.

BRUCE BOGER: Okay.

CHUCK CASTO: Or from a technical perspective, we could BDA and we could use IR.

BRUCE BOGER: Thanks, Chuck. That helps.

BILL RULAND: Chuck, there was a news release from, it looks like, MIDI. They said there were hyper rescue vehicles, 30 cars started (inaudible) procedures for preparation of water spray. Do you know what that meant?

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

bed, whether there's structural integrity, you know, what there is. But we think, our opinion is a high-volume, liquid flow system would probably be the most effective, and the coning nozzles in some cases.

But just standing off -- you know, you're getting lethal doses standing off pulling a truck in there with a very course, you know, method of water spray.

BILL RULAND: Okay.

CHUCK CASTO: You should -- hopefully, you have those pictures of the building by now.

BILL RULAND: Yeah, let me check.

BRUCE BOGER: Chuck, do you have anything else for us?

CHUCK CASTO: No. I've got to get going to the Tepco headquarters. We'll talk soon.

BRUCE BOGER: You know Dan Dorman's showing up soon; right?

CHUCK CASTO: Okay. We'll talk soon.

BRUCE BOGER: No -- Chuck?

CHUCK CASTO: Yeah?

BRUCE BOGER: The question is, do you

know that Dan Dorman is --

CHUCK CASTO: Yeah. I said, yeah, I know that.

(CONFERENCE CALL INITIATED.)

04:41:58/05:04:03

(Roster playback.)

(Standby until 4:44:17.)

BRUCE BOGER: Good evening all. This is

Bruce Boger. I got the ET director's job tonight. I

think you all have the, the briefing sheet.

Basically, we continue to coordinate with various

departments and agencies. In fact, right now, I

think the Chairman is in speaking with Naval Reactors
and also INPO to --

(Static on the line.)

(Technical issue corrected.)

BRUCE BOGER: Okay. Thank you.

We continue to coordinate with various agencies. As far as the plant status goes, I'll give you some, some late-breaking news at the end of the caller near the end of the call because it is late-breaking. We haven't assessed it yet.

2

2

2

21

2

24

2 5

Okay, the ANS flyover found the greatest concentration of contaminated materials to the northwest of the site, and there's a narrow band to the northwest beyond 13 miles from the site where the integrated four-day doses approach or exceed 1 Rem.

We made the right decision on our prior recommendations in evacuating everybody within 50 miles.

BRUCE BOGER: Okay. Thank you.

I guess the teaser that I, or I guess the other a piece of information is there has been some reports that San Onofre and Diablo Canyon has seen a small sample that's slightly above the minimal detectable activity level, so we're still pursuing that to see what that, what that might mean. It's iodine 131.

TRISH HOLAHAN: Yeah, and I've been contacted by both Diablo and Sons (?) and they know to get, they increased their sampling because we

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

didn't know if it was a random sample that -detected iodine is being confirmed in two locations
at Diablo and one location as Sons.

BRUCE BOGER: Now for the teaser that I said earlier teaser, the, we just received some photographs of the Unit 3 reactor building that were taken from a different perspective than we've seen.

Most of our photos have either been from the west side or from the top.

These are from the east, taken from the west looking east. And they are showing quite a bit of damage that we couldn't see before. So that's something that we'll be working on over, through the night, working with GE to get some structural, better understanding of elevations and what we might be seeing in these pictures.

But it, it doesn't look good. I'll tell you that.

Bill?

11

11

11

11

14

1 E

1

11

18

1

2

2

22

2 1

24

2ŧ

BILL RULAND: I have an update. I have an update.

This is the Bill Ruland, they Reactor

Safety Team director. We got these pictures from

Tepco provided to the team in country, the NRC team
in country. We've got these pictures and it, they,

this is Unit 3, and it shows a large, you know, shows significant damage to the structures. We provided these to General Electric, who, of course, had design drawings. These people have been in the building, inside the building, so they have a pretty good idea.

It turns out that the Unit 3's elevations are different than Unit 1. So if you look at Unit 1 and you try to make sense of Unit 3 structure, you're not going to get the right picture.

2 B

It turns out -- and of course, the people on the phone can't see this, but there is, what you can see exposed is the rail that the crane, the refueling crane, the drywell head crane arrives on.

That's what this rail is right here. Okay, so that's -- so what you can see is -- you know, it's, because of the way this building is constructed, it's constructed a level below the other structures.

So GE, in talking to us, believes that the drywell head -- it's tough to see the drywell head on this picture. So we've asked them to make, we provided these pictures and we've asked them to provide their assessment of what they see, and I think that's going to be critical to help us make a decision.

They are on it as we -- you know, I just

got off the phone with them, and they're going to provide their assessment of what, in fact, this is telling them, you know, if anything.

So you cannot rule out or rule in whether the spent fuel pool is still intact based on what we see in this picture. Now the Site Team's initial impressions were that the spent fuel pool might not be here, but they don't have the knowledge that General Electric has.

So we're going to get that assessment from them, and we're going to also talk to the site when I leave this phone call, or send an email, to make sure they know that their initial view of this matter is different than what they might have apparently thought. So that's kind of where this stands.

2 \\

The other piece we're working is we're stigll working the, the logistics for the system, you know, for the system with Bechtel, GE, and the, the in-country team, in-country NRC team. INPO is on that call, you know, so we'll going to do our, our coordination role, including with, you know, Japanese defense forces and also with the -- what the heck is the name? I'm looking for this name -- yes, NISA.

So we're coordinating with all those folks to get

these things done.

1

1

12

13

14

15

16

11

1

1

2

2

2‡

2

2

25

You know, it remains to be seen. As you can imagine, the logistics under the circumstances are trying, but, you know, we wanted to let you know we're working the problem.

BRUCE BOGER: Thanks, Bill.

So folks on the phone just received the briefing as the rest of the team did, so you've got the hot news.

Anybody have, anybody in here have other thoughts to add?

(No response.)

BRUCE BOGER: Any questions?

PAT HAYDEN: Hello. This is Pat Hayden in Public Affairs, and I just wanted to make sure that folks are aware that we're expecting a huge press presence at the Commission meeting on Monday. And hopefully we'll try to pull the, the photographers and network feeds to the television. But again, we just wanted to alert you to that.

And also, we've created a system on the web for Japan-related information, and we're populating that as we get it cleared.

FEMALE PARTICIPANT: (Off mic).

BRUCE BOGER: Any other questions?

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS

PAT CASTLEMAN: Yeah, this is Pat

Castleman. Could you go over the results from the

latest flyover? I didn't quite catch that, something

about, their radiation dose is significant beyond 15

miles northwest.

TRISH HOLAHAN: Yeah, well, the greatest concentration of contaminated material is located to the northwest of the access site. And there was a narrow bound to the, narrow band to the northwest beyond 13 miles from the site where the integrated four-day doses approach or exceed 1 Rem.

2 E

And, you know, we still haven't done enough, a large enough geographical location to completely map out the extent of the contamination.

PAT CASTLEMAN: What's the time period over which those doses, doses are integrated?

TRISH HOLAHAN: Four days.

PAT CASTLEMAN: Okay. Thank you.

BRUCE BOGER: Thank you, Trish.

Other questions?

PAT CASTLEMAN: Yeah, this is Pat

Castleman again. Yesterday, I sent a request to the

EDO to get a list or get a copy of the list that was

provided to USAID, of equipment that, you know, could

be provided. And this list was based on, you know,

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

B5B and so forth.

2 🛱

We haven't gotten that list yet, and I've been trying to get it because it's important for the Commission to know that in support of Monday's Commission meeting.

Do we have any information on when we can expect to see that list?

BRUCE BOGER: Now let me make sure we're talking about the same list. The equipment list that I'm familiar with is, is really a, a, a list of equipment that would be used to create a piping system or a pumping system from, you know, from the, the ocean back up in near the reactor building. So it's pumps, valves, fittings, you know, piping, things like that. So it's not a, a list of B5B-type equipment.

pat Castleman: Apparently, what we were briefed a few days ago was that we gave a list to AID, who sent that on or provided that to the Japanese in terms of what we could provide, and that would be in terms of pumps and, you know, power supplies and so forth. It was developed from B5B and, you know, that's all what I know. It has been provided to AID, but the Commission's not had it, and like I say, it's relevant to the Monday Commission

meeting.

BRUCE BOGER: Thanks, Pat. This is

Bruce. I, I'm sorry. I'm not aware of that. We'll
try and go back through our, some of our stuff, but
that's just not a, what I know. That's more
information.

PAT CASTLEMAN: That's -- okay. I'm confused then because we had been told that, to compile the list of the equipment that could be provided. And that list was sent to USAID. I'd have

up in response to B5B.

25

JOSH BASKIN: Again, to the extent it's not going to distract folks from what they're doing -- it's kind of an important time right now -- we will check on that. And if there is something, we will get it to you. If it's going to pull people off, then we probably won't aren't going to be able to do it at this point.

BILL ORDERS: That's okay. This is Bill Orders. We can get it from somewhere else.

BRUCE BOGER: Yeah, we're, but we're just drawing a blank in here for the request, and people have been here the whole time. So I, I respect your request, and we'll take a look at it as we can.

Other questions?

Castleman. Over the days, we've received reports that people have received, like, occupational exposures, have received lethal doses. Do we have any information on health effects, both occupational and public and, you know, whether or not any of these reported lethal dose rates have actually resulted in fatalities?

BRUCE BOGER: We're not aware of any such things here.

TRISH HOLAHAN: We've got nothing, any kind of confirmed information, confirmed data. We haven't heard anything about worker exposure. We did hear one thing today that somebody moving a fire truck in got like --

What were those numbers that were quoted today?

DONNA ORDAZ: Ten rads in two minutes.

TRISH HOLAHAN: -- 10 rads in two minutes. That's the first people exposure data that we've gotten from any source other than I guess maybe what you might be seeing on the news, and we've not gotten anything confirmed or official.

PAT CASTLEMAN: Thank you.

BRUCE BOGER: Other thoughts? Questions?

DUKE: Bruce, I've got one more question

for you. It's Duke. Do, do we still believe the

Unit 4 pool is dry?

BRUCE BOGER: Yes.

Other questions?

BILL ORDERS: This is Bill Orders. On the Unit 4 pool, why do you think that it's dry if we have two indications that it's not?

BRUCE BOGER: We have what, Bill?

BILL ORDERS: We have two reports that it's not. One comes from Japan; one comes from France. So my question is, why do we believe it's dry when they don't?

BRUCE BOGER: Well, my understanding is of the radiation levels from helicopters that go, that have been flying over have been significantly more than one would expect if there was water in the pool.

JOSH BASKIN: In addition to that -- it's Josh again. I know we've had a lot of debate about the condition of the Unit 4 pool. Again, it's not all that relevant considering everything else going on at the site -- but the Japanese government and multiple press reporting yesterday and today have said anywhere from, they have no idea what the condition is, to, they agree that it's probably very low on water if not drained.

So, again, you can look at public press reporting to see that as well.

BRUCE BOGER: There's no steam coming off of it. There's, you know, high radiation levels.

We're going with that.

BILL ORDERS: I understand.

BRUCE BOGER: Anybody else, questions?

Comments?

(No response.)

BRUCE BOGER: Okay. The, the next phone call will be tomorrow morning at 7:30.

Thank you.

COURT REPORTERS AND TRANSCRIBERS

(CONFERENCE CALL INITIATED.)

5:04:38/5:30:39

MALE PARTICIPANT: Well, he's calling in to talk, to tell us about what happened in the meeting. He said they are very concerned about the condition of the reactors from the seawater impact, very concerned.

BRUCE BOGER: All right. Put him up on the bridge.

Chuck?

(No response.)

FEMALE PARTICIPANT: Chuck, are you

there?

(No response.)

(Standby.)

(Extraneous content omitted.)

MALE PARTICIPANT: Chuck was calling in (inaudible) after the discussion with the Tepco officials.

(Extraneous content omitted.)

MALE PARTICIPANT: This is the assignment of what our dose needs are?

MALE PARTICIPANT: We're working on a -- actually, Trish is working on a statement (off mic).

(Extraneous content omitted.)

(Standby.)

BRUCE BOGER: Chuck?

CHUCK CASTO: Yeah, this is Chuck.

All right, I've got --

Let me ask you did guys to keep a little line discipline here so that I can, you know, the background noise -- I'm sorry to ask that, but sometimes it's difficult if there's conversations in the back of the room, and this is important enough to listen to.

We met with chairman of Tepco and I met with the chairman of Tepco and the chief nuclear officer. It was a cordial meeting. The, their concern, their priority, they've asked us to prioritize is reduction of radiation and the

1

٠.

23

24

25

MALE PARTICIPANT: Chuck?

CHUCK CASTO: -- they talked about the bottom heads and they talked about the reduction in heat transfer --

BRUCE BOGER: Casto?

CHUCK CASTO: Yeah?

BRUCE BOGER: Could you please start over again? I'm sorry to do this to you, but the Chairman just walked in the room and the context is important.

CHUCK CASTO: I started, I had a meeting

with the

They pressed a need for us to focus on radiation reduction at the site and the reactor vessels. They're, obviously, they have, they know something -- I'm, it's only inference here, and I don't want to exaggerate, and I've got Tony and Brooke here with me that were with me.

And so you check me if I'm exaggerating.

CHUCK CASTO: But they had a fairly immediate concern about seawater impacts on the reactors. So I say -- and they're less concerned -- I mean, they were not really concerned that all or, or thinking about the cooling of the spent fuel pools. That, that dropped to a lower priority. You know, that situation is what it is. You know, it's not -- it is what it is. We sent you those pictures from the ground level on Unit 3.

But it's clear their concern was seawater in those reactors on the bottom -- well, they didn't

NEAL R. GROSS COURT REPORTERS AND TRANSCRIBERS

tell me this. They just said they were concerned with seawater in the reactors. They, they left and asked us to stay and meet with their technical staff, who are leading the response to the event. They're, and we get all the cordial stuff and talked about points of contact.

And I asked them, could you please explain your concern with the seawater on the reactor vessel? And they said, we are very concerned with seawater deposition and impacts on the bottom heads, salt's impact on the bottom heads, and we're very concerned about heat transfer rate on the fuel.

So what I got from the meeting -Help me out, Tom.

TONY ULSES: Um-hmm.

2 🖁

was, yeah, the cooling water system's important, and we need to do the spent fuel pool thing and that's very important work. But their concern was getting radiation down so they could get in there and run systems or do whatever they can to recover and get out of this seawater situation because of corrosion concerns and concerns about the bottom head.

They seem to be -- Tony, they seem to be very concerned about that.

Now, I infer from that that they know something we don't know, but I don't know that that's true.

CHAIRMAN JACZKO: Okay, Chuck? Let's --

CHUCK CASTO: Yes, sir?

CHAIRMAN JACZKO: I know you guys are exhausted, and you guys are doing a phenomenal job.

Let's, let's try and focus a little bit on, on what we need to do right now.

CHUCK CASTO: Yes, sir. That's, that was my reason to call you.

10

11

12

1 B

1

15

16

 $2^{\frac{1}{2}}$

22

23

2 4

2

CHAIRMAN JACZKO: What, what support do you need from us?

establish an EOC base team out here, whatever you call it, site team. We need a site team out here and get some office space, getting an EOC and some office space. We've got to stand up, and I think we're going to have to stand up several organizations.

One, we're going to have to stand up this cooling water organization and take care of the spent fuel pools, a radiation organization, a research organization, and, and the a project organization I guess would be -- this is just green streaming, okay?

I mean, I just came back in a cab from

talking to these guys. But it's got me enough concerned that I think we're going to wind up here.

CHAIRMAN JACZKO: Chuck, do me a favor.

Take a deep breath.

CHUCK CASTO: Yes, sir.

1

1

12

1.

1

1

1

17

1

11

2

2

2

2

2

2

CHAIRMAN JACZKO: Okay. I don't think we can stand up all of those things. So talk, talk to me about what, what is your gut telling you right now is, is the direct --

CHUCK CASTO: I think, there, we need, we need research on the reactor vessels and seawater and consequence, consequence management.

CHAIRMAN JACZKO: Okay, and you're saying
-- I'm sorry -- when you said you want those teams
stood up, you mean here in the Ops Center or there in
Japan? I may have misunderstood you.

CHUCK CASTO: There, we need research, but we need a project team here.

CHAIRMAN JACZKO: Okay, you need a project team there.

Let me ask you this, Chuck. Do you think that project team should be NRC people or somebody else, like maybe INPO or something like that?

CHUCK CASTO: I think INPO and Research ought to work together on, probably on the reactor

vessels --

CHAIRMAN JACZKO: Okay.

CHUCK CASTO: -- and whomever, I don't know, on reducing radiation levels at the site. I don't know who the best organization is to do that. I think maybe DOE, somebody, you know, they, they're, they're the experts on decon and radiation levels. So I think they farm that off to DOE, let them take care of radiation. You know, we're, we're good at reactor vessels and reactor stuff, but we're going to Research to help us on seawater impacts.

So you would stand up those organizations wherever, and and wind those up so that we can -- and then, and then somebody to manage all the stuff.

TONY ULSES: Yeah.

CHUCK CASTO: We, I think this is a major change in the mission based on what the said.

And, by the way, Chairman, he sent his regards and wanted us to share with you that, that we have a close working relationship, and we agree with that.

CHAIRMAN JACZKO: Okay. So --

CHUCK CASTO: And then you have EPA for dose prevention and --

TONY ULSES: Projection.

CHUCK CASTO: So you got EPA working dose, DOE working radiation, and Research and INPO working on, in the labs working on seawater.

CHAIRMAN JACZKO: Okay, Chuck, we'll figure out who, who's going to do what.

CHUCK CASTO: Okay. That's good.

CHAIRMAN JACZKO: So let's just repeat back. We need someone to look at, to look at the issue of seawater and seawater impact. We need somebody to look at dose estimates. Is that -- and then you need a project management team. Are those basically the three things?

CHUCK CASTO: Yes.

1

1

1

1

14

11

18

19

2

2

2

28

24

25

CHAIRMAN JACZKO: Okay, so let me repeat them back to you again.

CHUCK CASTO: Okay. Let's write these down.

CHAIRMAN JACZKO: Strategies for reducing radiation at the site, somebody to look at the seawater impacts on the vessel, somebody to look at, a project management-type group, and then somebody to look at dose calculations.

CHUCK CASTO: Yes, and, yeah, projections and calculations.

CHAIRMAN JACZKO: Okay, dose projections.

CHUCK CASTO: And I promised him that I

CHAIRMAN JACZKO: Okay. Good.

CHUCK CASTO: And he promised to get me dose information off the SDF, off the Self-Defense Forces.

CHAIRMAN JACZKO: Oh, good.

CHUCK CASTO: So that would give us better projections. And thanks to -- I forget who it was who asked me to get that -- but whoever asked me, that was a good suggestion and I appreciate -- I think it was Trish. Trish asked me for it, and I

asked him for it.

At first they were worried because he said, you know, I can't get you all the dose, you know, that everybody's exposed to. I said no, no, no, that's not what we want. You just get us some example doses and we'll be good.

And I don't know what you all have assessed with those we sent you, the ground-level photos on, on Unit 3. I'd be interested to know what your assessment is of Unit 3, the -- somebody just called them the parking lot photos. They were taken from the parking lot of Unit 3.

CHAIRMAN JACZKO: Chuck, I think what we got from GE is

15

1 (

11

12

18

22

2 3

25

you. Just a high-level, let's just take a step back and look at the whole situation.

If we get this information, what's, what's your understanding of what will be done with it?

But let me get, let me double back with

CHUCK CASTO: Sir, I believe that they are looking for us for solutions.

CHAIRMAN JACZKO: Okay. And this is where they need solutions.

CHUCK CASTO: Yeah, and I think they were, they were desperate for options.

Tony, help me out. Make sure I'm saying what I heard.

I don't know if "desperate" is the right word, but they were certainly wishful for options.

And so I'm afraid that, you know, that's why -- and they want us, I think, to work in the Tepco building.

They want, they us to embed with their staff in the Tepco building, some of our staff. So we're going to have to get liaisons and work 24/7 and their staff.

CHAIRMAN JACZKO: Hey, Chuck, let me go back to one thing and then I'm going to get out of here and let you all talk to the, the folks who know more than I do.

So you need people like the project management team. Right?

CHUCK CASTO: I need people who can work the diplomacy side and project management, and we need some office space. This conference room is, is not going to get it for us. So we, we need to have, we need to have a facility.

CHAIRMAN JACZKO: Okay.

CHUCK CASTO: Wherever it is in Tokyo, but we need to have some kind of facility.

OHAIRMAN JACZKO: Well, we'll get working on that. And I'll let you go back to the Executive Team and work out the details stuff.

CHUCK CASTO: Okay.

Who's the lead in the ET team right now?

BRUCE BOGER: It's Bruce. And Marty's

here too.

CHUCK CASTO: Okay. hey, Marty. So I guess I would just let you guys -- that's the mind dump out of that meeting. And I guess I would just let you guys take that information and ponder it and, and, with something and let us know. Is that too simple? Is that me pushing off the --

BRUCE BOTER: No.

BILL RULAND: Chuck, this is Bill Ruland, and I can't possibly fathom the pressure you guys are under.

CHUCK CASTO: That's all right, thanks, Bill. But we -- go ahead. Go ahead.

BILL RULAND: Now that I got that out of the way --

CHUCK CASTO: That's what we have to do at every meeting -- just as an aside, I mean, every meeting we have to go in, there's the formality of our sorrow, the honor to work with you, the, you know, the outstanding job -- they know, it always has to be done at every meeting, the first time, first thing when you walk in. But go ahead. Thanks for doing it.

BILL RULAND: Let me talk seawater.

CHUCK CASTO: Okay.

10

11

12

1 2

1

1

16

17

18

1

20

21

22

23

24

26

BILL RULAND: Several days ago, we talked of Paul Clifford. He's our fuels expert. He didn't have any concerns about zircaloy fuel and corrosion rates regarding the fuel itself.

CHUCK CASTO: Okay.

BILL RULAND: He said that zircaloy is highly resistant to corrosion.

CHUCK CASTO: Okay.

BILL RULAND: So, but what I'm going to go back and ask him about is, okay, let's, you know, make some assumptions about where we are today and

how long this fuel has been uncovered. Is your, does your assessment change? So that's, that's number one.

CHUCK CASTO: I don't know that I would go to one source either because -- I mean this is the chairman of the NRC telling us that he's highly concerned, imminent, about that corrosion.

MALE PARTICIPANT:

CHUCK CASTO: And it's not corrosion of the fuel. It's heat transfer rate. It's not corrosion of the zircaloy. If he transfer rate.

MALE PARTICIPANT: Tepco.

CHUCK CASTO: I'm sorry --

BILL RULAND: One, I would call,

legitimate concern, and it goes to the heat transfer rate piece, is you essentially have a, an evaporator in the reactor. You're, you're putting in possibly boric acid, putting in salt water, and you're boiling off steam. And of course, that's distilled water.

CHUCK CASTO: Yeah, you're,

concentrating.

10

11

12

13

14

15

1

1

1

19

20

21

22

21

24

25

BILL RULAND: And you're concentrating it. You know, we have, Len Ward (phon) has done a lot of work on, in our staff, and we're going to

reach out to him and reach out to others, you know, make some assumptions about where they stand today, and is there some sort of action that they could take to either improve the heat transfer or at least not make it worse.

CHUCK CASTO: Right, and I, you know, my feeling was they were, they want to try to get off the seawater and, you know, get the seawater out of those vessels and get to something else. And my interpretation of that was we can't do that with all the radiation levels that's around there.

BILL RULAND: Yeah.

1 (

11

12

1 B

14

15

16

17

18

19

20

21

2 🛭

23

24

21

CHUCK CASTO: So we can get the radiation levels down help us get the seawater out of those reactors.

BILL RULAND: Well, my guess is, just off the the top of my head, if they restored power, they had course spray, and they had the water going in in different directions, it's a big, that would be a huge deal for them. All right? But, you know, that's, that's --

CHUCK CASTO: You know, there's probably also fuel damage in there. You know, you don't know anything about the condition inside the reactor.

BILL RULAND: That's right. Now --

CHUCK CASTO: So you've got, you know,
you could have fuel on the bottom heads, and that was
another thing they were worried about was fuel in
the, in the bottom heads, the corrosion rate.

I mean, the doesn't come to me and say we're very concerned short-term about this unless they know something.

BILL RULAND: Yes. Now let me talk to you about those pictures. We, we shipped those pictures off the General Electric,

CHUCK CASTO: Yeah, I see that. I see the rail.

BILL RULAND: Okay. That's below what I call the first set of concrete windows.

CHUCK CASTO: Yeah. I think our concern is that debris, that debris bed on top of there, I mean, you can drop almost anything into a spent fuel pool and punch a hole into the bottom of it.

BILL RULAND: Right.

CHUCK CASTO: You know, we've had, we've had in our spent fuel pool, somebody dropped, you know, something small and punched a hole. And you've got a major rubble bed on top of this thing. You've sent all kinds of stuff down to the bottom of that spent fuel pool.

BILL RULAND: So GE's in the process of

-- after I get off the phone call, I'm going to ask

them, is there a preliminary assessment they can give

us, or is there some, how long is it going to be

before they get a, a final assessment. Whatever I

get, I'll make sure I will forward it to your team.

1

1

19

2 Ø

21

22

2 3

24

25

CHUCK CASTO: Thank you, Bill.

BILL RULAND: And we will work on the heat transfer, these heat transfer questions for you.

CHUCK CASTO: Great.

BILL RULAND: And radiation doses --

TRISH HALOHAN: Yeah, we'll talk to Jack, and we're forwarding him the AMS results as we speak. And then we'll work on -- he's told us, he's -- and they were going to share the radiation doses at the site with, with him in two hours. And then he'll forward them to us, and we'll see what we can do with those.

CHUCK CASTO: Thank you.

Hey, Bill?

1.

BILL RULAND: Yes?

CHUCK CASTO: What I would think about is think about how we can get in the reactor building through a keyhole is something to find some connection to the RCS, then we can start pumping in, pumping in freshwater. You know, so you can, you know, get the -- does that make sense?

BILL RULAND: I understand.

CHUCK CASTO: I mean, you're never going to be able to go in there and start a pump somehow because, I mean, look at the rubble beds in these buildings. You're not going to be able to go in there and start a pump. So you need to drill a gopher hole through the plant somehow, get a gopher hole through there somehow to some connection on the RCS to some kind of freshwater connection or borated water connection, whatever we decide.

BILL RULAND: And one would argue you're almost at the point you want the whole building up.

CHUCK CASTO: Well, we've thought about that too. One strategy might just be the sarcophagus at this point.

BILL RULAND: Right. Okay. We've got the questions.

CHUCK CASTO: Somehow, you'd have to put boron in the vessels before you did it, you know, probably. I don't know. I mean that's all, that's all technical stuff well above my head. I think you probably need the lab and them to work on about that.

BILL RULAND:

.1(

CHUCK CASTO: The embassy can do that.

They've got charter flights out of here. You know,
they're flying constant charter flights out of here.

We, we can get him lifted back from the Embassy.

FEMALE PARTICIPANT: Do they have medicines or any facilities at the --

CHUCK CASTO: They, THEY had a (audio interference) that he visited, I think, yesterday.

FEMALE PARTICIPANT: Okay, well, just let us know if you need anything from Chuck to help make that happen if your team's starting to need help. We can get on that too.

I think I'm going to -- well, I don't know if we can get him out of here with his head cold, but we'll talk to the embassy and see what it takes to get him on -- and they can get them on instantly. An hour and a half, he can be a charter flight out of here. So, and you guys are working on a replacement for him.

But, you know, yet. We can get them out of here, I think, okay.

BRUCE BOGER: But, Chuck, just to revisit the expertise that we're planning to send in the next

wave, we aren't planning to send the next wave of BWR experts. Right?

CHUCK CASTO: I think I talked to somebody that we don't need BWR experts. We have a BWR reactor anymore.

BRUCE BOGER: So the replacement for Tim would be, you know, would be a different skill set.

CHUCK CASTO: Yeah, we need to stand by on the replacement team. Let me get out, get off of this conference bridge, and I'll talk with you directly because I think would the mission shift this morning, the, the skill set's going to change again.

BRUCE BOGER: Yeah, what I wrote down was "change in needs and expertise?"

CHUCK CASTO: Yes. Yeah, I think we got, we got a big change in expertise. So let me call you, let me call you separately.

We don't need to hold everybody up for that.

MARTY VIRGILIO: Chuck, I think -- it's

Marty -- I think it's a good idea for us to talk off

the bridge because there's some unfolding strategies

that we need to make you aware of.

GHUCK CASTO: Let me call you back and get on the -- don't you have a supersecret bridge or

something, a conference room or something like that?

MARTY VIRGILIO: Give us a little while.

CHUCK CASTO: Okay. All right, we'll

talk later this morning. I need to go up and

back-brief the ambassador anyhow.

MALE PARTICIPANT: Okay.

CHUCK CASTO: Goodbye.

1

(CONFERENCE CALL INITIATED.)

5:30:45/5:42:13

CHUCK CASTO: This is Casto of the Japan team.

BRUCE BOGER: Hey, it's Bruce here. How can I help you, sir?

CHUCK CASTO: They said you wanted to update me on what the Chairman worked out on the Naval Reactors or something.

BRUCE BOGER: Yeah. It looks like they're working on a project management team. Sound familiar?

CHUCK CASTO: Good.

BRUCE BOGER: A consortium of Bechtel,
Navy, and INPO. It starts getting people here
tomorrow, tomorrow morning if possible, gathering,
you know, in the NRC building.

CHUCK CASTO: Okay.

BRUCE BOGER: Starts things going.

That's all I have. Marty is, is still back in the side room on the phone. So he probably will emerge with additional information.

CHUCK CASTO: Yeah, and I have 11:30 with the ambassador. So I'll talk with him after I get back with the ambassador. I hate to blow off the

deputy EDO, but, you know, at this point --

FEMALE PARTICIPANT: That's all right.

You can catch up Marty on the next call.

10

MALE PARTICIPANT: Chuck, if you were to ask Marty, he's saying he's supporting you.

CHUCK CASTO: Yeah, he would say that he's working for me.

MALE PARTICIPANT: Okay.

(Extraneous content omitted.)

CHUCK CASTO: But here's another one. Of all things, it looks like there's a potential that they're going to shut the Embassy down tomorrow for a power outage to tie in another diesel or something, so we don't have, we may not have a conference room tomorrow. So, we're, we're working with the hotel to get them to stand up a conference room with some phone lines and computer connections for tomorrow.

We may have to displace, it might be that we have no -- but I don't -- I don't know. I thought maybe we ought to just move the hotel, period, but we're so tied into the embassy, that wouldn't work. So we're probably just displaced for one day and then come back.

BRUCE BOGER: Okay.

CHUCK CASTO: Anything else?

BRUCE BOGER: No. We're working on the chemistry problems and materials problems.

FEMALE PARTICIPANT: And we're supposed to get some real-time data on doses from NISA.

CHUCK CASTO: Yeah, I promise

that I would get in the AMS data

too.

BRUCE BOGER: Right, and I thought I heard that had been sent.

CHUCK CASTO: Okay. Good. Okay. I've got -- I'll tell you what happened. As soon as we got back here, Tepco, their recovery manager called as soon as we got back and they wanted us back over to Tepco. So I'm, I'm quickly just -- I'm going to talk to Marty in detail about this, but I'm quickly running out of soldiers here.

BRUCE BOGER: Yeah.

CHUCK CASTO: So we start need to start moving people this way. And we need -- so Marty and I and you, Bruce, need to work on the list as soon as, I mean, that's the top priority is to work on the list because I'm, we're running out of people.

BRUCE BOGER: Yeah, we're working on a list. We want to confirm that the talent and the skill sets that you are seeking. You know, it still

seems like you need the building structural folks.

CHUCK CASTO: You know, we ought to keep that, we probably ought to keep that resource back there with the, with the structural. What we need are people -- we need people that are more, get things -- I don't how to say this. I don't know, you know, get things done, coordinate, carry out plans, that kind of things.

You know, a guy like Monninger -
Monninger's the perfect guy. Tony's good. Kirk is
good for us. You know, the plans, most of the
technical plans are coming from you guys, or we
should move that way, that you guys pump us ideas and
the project management people help, you know,
logistically with it. And we'll move to help Tepco.

It would be like a -- I'm just brainstorming, Bruce.
Let's just talk about this.

2¢

BRUCE BOGER: Yeah, I'm listening.

CHUCK CASTO: But it would be like a base team, you know, management kind of thing. I'm almost thinking we ought to go to the branch chief level, that -- you know, a few technical specialists but like branch chiefs instead of technical people.

BRUCE BOGER: Oh.

CHUCK CASTO: but that would be a major

shift in your philosophy. Maybe that's wave three, but --

BRUCE BOGER: Now, I was talking to

Marty. I, you know, I'm nervous about us maintaining
this type of presence for a long time in, in this
facility.

CHUCK CASTO: Well, we definitely got to change the facility.

BRUCE BOGER: We might need, we might actually have an event in the United States that needs to be handled.

I don't know.

CHUCK CASTO: Yeah, I worried about that the other day. I thought about it. What happens if we have an event? What happens to who? You know?

BRUCE BOGER: Region X takes care of it;

CHUCK CASTO: Yeah.

BRUCE BOGER: But we need to think that through.

CHUCK CASTO: Right. And we need a facility over here. The conference room -- that's what I was trying to tell the Chairman. This conference room just isn't getting it done for us.

BRUCE BOGER: Does the ambassador have -you have his hear, right?

CHUCK CASTO: Yeah, but they don't have any space in the building.

BRUCE BOGER: You're right.

Working on a six-month lease of property here or something of property here. I got an email on that the other day that they're looking to stand up -- whatever they're going, if you talk to Jerry or somebody over there, whatever they're doing, they need to accelerate it.

BRUCE BOGER: I'm not sure I got that, Chuck.

CHUCK CASTO: I got an email the other day that said that they are looking at obtaining office space over here for six months.

BRUCE BOGER: Okay.

CHUCK CASTO: And whatever they're doing, whatever they're working on to get that done, they need to, you know, to advance that.

BRUCE BOGER: Okay, it needs to happen immediately if not sooner sooner.

CHUCK CASTO: Yes.

BRUCE BOGER: Okay. Now you said you have an 11:30 with the, with the ambassador. Marty would like to talk to you about that. How much --

CHUCK CASTO: No, he's here. He's on the ninth floor. It doesn't take me long. But I had to, I had the blow him off on the 9:30 meeting, and I ain't blowing him off twice in a row. I tell you that. You know, I, the 9:30 meeting, I briefed him at eight o'clock and, you know, did my apologies that I was going to miss the meeting. But I don't want to do that too much, and especially twice in a row.

BRUCE BOGER: (Inaudible) just let me . know that the AMS information was sent to Jack Foster.

CHUCK CASTO: Okay, and how's he -- and is he going to get it to high levels at Tepco here or something? Oh Jack Foster here. I got you.

BRUCE BOGER: Jack Foster.

CHUCK CASTO: I'm sorry. I'm running a little tired.

BRUCE BOGER: We can only imagine, so.

CHUCK CASTO: Yeah. The four o'clock phone call this morning after not getting to bed until after, well after -- you know, it was -- I'm tired this morning.

CHUCK CASTO: Yeah. Understood.
Understood.

CHUCK CASTO: I'm starting to forget

Okay, I'm going to go upstairs and -names. MALE PARTICIPANT: Not yet. Just a second. Just hold on just the second. CHUCK CASTO: All right. MALE PARTICIPANT: Please. CHUCK CASTO: All right. MALE PARTICIPANT: Marty, I know, is on the phone call with --CHUCK CASTO: The Admiral. 1 MALE PARTICIPANT: A couple of them I 11 think. One the retired, one retired, one active. 1: FEMALE PARTICIPANT: (Off mic). (Standby). 1 1 CHUCK CASTO: That matrix -- and I hate to interrupt, if I'm interrupting out here -- but 1! 1 that matrix we're sending out, that very simplified matrix, I'm getting a lot of good feedback from the 11 11 government on that. 11 BRUCE BOGER: The one that has the unit 2 number and priority and status? 2 CHUCK CASTO: Yeah. 22 MALE PARTICIPANT: Okay. 2 3 CHUCK CASTO: I was just at a 24 governmental meeting a while ago, and I'm getting 2 good feedback on that.

BRUCE BOGER: We appreciate it to, but we're beginning to wonder how stale some of the information is.

CHUCK CASTO: Yeah, I'm okay with keeping those columns, the rows the same because that's what the ambassador wants. But if you guys want to change and add some information at a very high level in the boxes, a little more explanatory, that would be great.

But you got to remember, you know, that, this product is for the ambassador.

25

FEMALE PARTICIPANT: He was hoping to catch -- it'll probably be perfect timing -- he's hoping to catch the off-going shift and the oncoming shift in what he wanted to share with us.

CHUCK CASTO: Okay. What time is it there? It's 12?

FEMALE PARTICIPANT: So about the time you get back is about the turnover time.

CHUCK CASTO: What time are you guys working? Are you working noon to midnight or what?

FEMALE PARTICIPANT: Eleven to seven.

FEMALE PARTICIPANT: We're trying to do three to 11, 11 to seven, and seven to three. Some are --

CHUCK CASTO: You have a three-shift rotation.

FEMALE PARTICIPANT: Some are on 12; some are on three.

CHUCK CASTO: Well, you guys, I know it's been a grind for everybody back there.

MALE PARTICIPANT: You got it easy, buddy.

CHUCK CASTO: Now. Okay. I'll call you, I'll call him after my next meeting.

MALE PARTICIPANT: Okay.

FEMALE PARTICIPANT: Call him in the Ops

Center.

MALE PARTICIPANT: Thanks, Chuck.

COLUDE DEDODEEDO AND EDANOCHIOCHI

(CONFERENCE CALL INITIATED.)

5:42:21/5:52:54

MARTY VIRGILIO: Bill, it's Marty. How are you this evening?

Good. How are you?

MARTY VIRGILIO: Fine, thanks. I've been involved in several conversations with and Admiral Donald tonight, and I think we've worked out a plan. But I'm really glad you called. I was going to wait until the morning to call you. We're trying to settle in on the details.

Okay. I think we're ready to talk now, at least, the team we put together, and what I'd like to do is may be kind of go through that with you and what tomorrow might look like.

MARTY VIRGILIO: All right. Let me just suggest that we bring in the team leads so that they can hear it firsthand. We'll get our Reactor Safety and Liaison Team leads in.

Okay. Very good.

(Standby.)

1

16

17

1

1\$

20

2

22

23

24

25

MARTY VIRGILIO: Bill, I've got the team, the team leads in here now. And maybe I could start with my understanding of what's going to happen over the next few days and in the longer term, and you can

either verify, validate that or modify it. Okay?

Very good.

MARTY VIRGILIO: Okay, so my

and Admiral Donald, is that we're going to be looking to forming a consortium that would provide industry-to-industry support in addressing this problem and what I described or what I think about the model that was used in Deepwater Horizon to address, to address the problem that they were having in the Gulf.

1t

And we would include in this, in this consortium folks like the Department of Energy,
Bechtel, Areva, and others, and that was probably being organized by your side, as to who you thought we were going to bring bear, General Electric,
Hitachi. Who are the key players that could help us identify and implement solutions? Does that square with your understanding so far?

Yeah. I have put together a team with representatives from Exelon, from the utility business, GE, Hitachi, EPRI, Bechtel, Areva, and BMW, with the idea that that could form the nucleus. We could reach into those companies. And if we need to, we can bring in QRS, Westinghouse, and

(inaudible).

1

1

12

18

14

15

18

17

18

19

20

2

22

28

24

25

But we thought we'd start with this other group first and kind of think through what, what it might look like.

MARTY VIRGILIO: Okay. Now, we're thinking about a kickoff meeting here tomorrow afternoon. Is that doable?

Yes. Now, my plan right now is I'm going to, I have an individual that works (phon), and then I am planning for me on coming up, and I'm reaching out tonight to several people. We'll have (phon), and I've probably mispronounced his name, from Areva to be there committed to be there. from Bechtel committed to be there. We're working the General Electric contact (inaudible), and so we're working to get him to be there tomorrow. The BMW and the EPRI people are in California, so they won't be there tomorrow afternoon, but they could be there Sunday.

MARTY VIRGILIO: Can they videoconference

I can work on making that

happen.

in?

MARTY VIRGILIO: Okay, because we've got

the video at this end. We just got a think about the room, then, that we would set up at this end. It would have to have a videoconference capability.

Yes.

MARTY VIRGILIO: It would seem to me that the kickoff meeting would be critical, and if we can have them in -- and we'll certainly have a bridge set up because we'll have somebody from our team in Japan on the bridge. So, I mean, at the least, it would be audio conferencing, and at the other side of this, we would videoconference it.

10

11

1

14

1

16

17

1:

1

2 D

21

22

23

24

25

Okay, let me see if we can -- I think we could at least get, get the, the audio going.

MARTY VIRGILIO: Yeah, I think that would work. That's easily doable.

what time, for the kickoff meeting, are you thinking, Marty?

MARTY VIRGILIO: Well, I was looking for you because, you know, while you're assembling your team, our folks are all here, including the DOE folks and the Naval Reactor folks that would be participating.

I've talked to, I talked to Steve Lyons earlier, and so he could be here two o'clock. If two

o'clock works for you, it would be a good time for us.

Why don't we, why don't we tentatively schedule it then for two o'clock, and

I'll make sure that people are aware of that and, and have them, you know, move towards that time.

MARTY VIRGILIO: All right. If you can give us names, we can give them the secret handshake to get them in the gate.

I can give you some names right now.

10

11

12

13

14

15

16

1

11

15

16

11

18

19

2 Þ

21

22

28

24

2 🖁

BILL RULAND: Bill, let me give you an email address.

Yeah, one second please.

BILL RULAND: All right, HOO.HOC@NRC.gov.

H-O-O, dot H-O-C @NRC.gov

BILL RULAND: That's correct.

Got it. Thank you.

MARTY VIRGILIO: Would you like us to reserve a set of rooms across the street at the Marriott?

Yeah, if you wouldn't mind. I've (inaudible), so I'll probably be okay, but I don't know about the others. But if they're, if you could get us a half a dozen or so rooms, that probably would be helpful. I don't know what the demand on those rooms up there might be this weekend.

MARTY VIRGILIO: Probably not too bad, but we'll get on it right away and, and try to get a block of rooms reserved for you.

Okay.

MARTY VIRGILIO: So I think one of the, one of the things that you might want to consider in having the people from California on the phone, or having them in the air and having somebody else in

that company or organization represent them on the phone. I wouldn't want to delay their arrival.

I understand.

MARTY VIRGILIO: But that's up to you.

I'll work out that detail so we kind of know what to do there.

MARTY VIRGILIO: Okay. And we're going to start working through diplomatic channels in country to try to make sure that what we develop is implementable from a political standpoint and we're also get the best data we can about the site conditions, radiation fields, so that we, what we development is implementable from that perspective.

1

11

12

13

14

1 3

1 8

17

18

19

20

21

22

2 3

24

25

I understand. That would be very helpful as we've been continuing to struggle with high confidence data.

MARTY VIRGILIO: Yeah, we all have.

As of this evening, the Tepco folks that we've been working with, that our team in Japan has been working with, have got real concerns about reactor vessels. And so I guess we'll be able to talk about that some more tomorrow.

But they seem to be expressing concerns about the longer-term effects of putting seawater into the reactors and the impacts on the materials

and the impacts on the fuel. So I know that's, from their perspective, that's -- they, Tepco -- see that as a high priority today.

But you know, Bill, they have shifted almost as frequently as the winds have changed there with respect to what their priorities are. So I just, it's not, it's not a good situation.

I understand.

Well, I'll be up there. Well, would it be valuable for me to get there a little earlier and just understand what the kickoff meeting might look like, just so that I can be supportive of the directive that's being set?

1

1

12

1B

1.

15
